PIGS are LOWER

Chester & Berkshire or Yorkshire & Chester. Let us supply you with some of our carefully selected feeders, all rugged and healthy and from fast growing stock. 6 to 7 weeks old \$3.50; 8 weeks old \$4. Limited number of Chester Whites at \$4.50. Will ship C.O.D. if preferred. A. M. LUX, Woburn, Mass. Tel. 1415

BUY SPRING PIGS

Chester Whites, Yorkshire & Chester or Berkshire and Chester cross. All Healthy, large, blocky pigs that will make large hogs. 6-7 weeks old \$2.75 each, 8-9 weeks old \$3.00 each. Will ship 2 or more C.O.D. Or send check or money order. Crating free. Send in your order. No delay. **Walter Lux, Tel. 0086, Woburn, Mass.**

DOGS

SHEPHERDS—Collies. Trained Cattle dogs and pups. Heel-drivers. Beaters. **WILMOT, East Thetford, Vt.**

COLLIE PUPPIES—Unexcelled, Beautiful Markings. Registration papers. C. Paine, South Royalton, Vt.

EMPLOYMENT WANTED

COLLEGE STUDENT. 20 years old, with farm experience, wants month's work on farm. Wages \$25.00 per mo. Write AMERICAN AGRICULTURIST, Box 367-A, Ithaca, N. Y.

Smart School Clothes

by
MRS. GRACE WATKINS HUCKETT

SCHOOL CLOTHES are in a special class by themselves because they must be able to "take it" and be good-looking at the same time. It is easy to buy clothes that do one or the other, but it takes more thought to combine these two features.

If the budget has no limitations the selection is easy; but since there are few such budgets, making some or all of the garments seems to be the answer. In this way, better materials are possible and this means longer and more satisfactory wear.

As for fall colors, black takes an early lead; then green, followed by blues, wines, grays and brown—a real brownish brown. When red is used it is clear and vivid. Deep pastels and rich dark colors distinguish the dressy dress.

In jacket dresses oftentimes, the color is the same for jacket and dress, but contrasting weaves and weights are used. For instance a plain wool dress with printed or striped jacket is considered very smart. Thin wool-rayon jersey is particularly important for dresses. "Baby checks," small sharp neat checks, are popular with juniors. Prints are receiving bigger emphasis than usual for fall clothes; they are favored in combination with other materials. The college and school girl will love them in soft hats or berets, scarfs, belts and gloves which she can make herself to pep up plain dark costumes. While checks and plaids are smart for sports styles, dots and spots go for dressier variations.

Rabbit hair cloth will be much used for sportswear, with flannel and plain weave fabrics for the more formal

frocks. Silk crepes, especially those which drape heavily, are featured for afternoon and evening dresses. Silk faille crepes in soft weights, silk pique, bengaline or shirred stripes are other fashionable fabrics. Velveteen and a new lightweight corduroy answer a demand for stiffer fabrics. Both of these are extremely useful for school wear. Printed cottons or spun rayon and cotton materials are more interesting than ever in design and color.

With these general style facts in mind, one can then go ahead and select a wardrobe, building around one color as a basis. Since the coat is usually the most expensive item it is wise to choose it first and have the other articles go with it. In fact it is good management to have the same basic color over several seasons, getting variety by changing accessories, blouses, etc., and by combining them to get different effects.

Besides having a basic color for the whole wardrobe, each garment should be chosen to serve as many uses as possible. The group of patterns which we have chosen here meet all these requirements and more.

JACKET SUIT PATTERN No. 2821 will go anywhere for daytime wear; it is excellent for cool days and for wear in colder weather under a top-coat. Jacket and skirt may be matched if one wishes to look taller, or mixed if one does not mind her height. Pattern sizes are 12 to 40. Size 16 requires 1½ yards of 54-inch material for jacket; 1½ yards 54-inch for skirt. Pattern No. 2525 includes three blouses. Sizes 12 to 40.

JUMPER DRESS PATTERN No.

Today in Aunt Janet's Garden

Time to Think of Lilies

LITTLE as you'd think it, now is the time to send in bulb orders for fall planting. In fact, daffodils may be planted early in September to good advantage. October is time enough to plant tulips since they do not seem to know when to come up as the daffodils do. An unseasonably warm fall might start premature growth.

Madonna lily bulbs and the Nankeen lily which grows similarly need to be planted before September. Both varieties send up a rosette of leaves in the fall, besides getting a good root system established. At least the Nankeen lily is supposed to behave like the Madonna in that respect—my two trials in growing Nankeen have not brought forth any as yet.

One of my ventures with new varieties has been so successful that I expect to add gradually to the list. The new varieties of daylily are a source of constant delight in our gar-

My Kingdom

By MRS. FLETCHER BROWN.

Before me lies my kingdom,
There's a sceptre in my hand;
I am of that royal family—
Farmers' wives across the land!

No mansion is my palace,
Just a shelter from wind and cold,
But bathed in morning sunlight,
Our cottage turns to gold.

When the sun sinks in the West,
And the supper work is done,
From the nursery I hear cooing—
It's the little prince, my son.

Now at kitchen door I stand,
Queen o'er all that I can see,
And beside me is my husband,
The farmer king who reigns with me.

den from May to mid-August. They, too, should be planted in late August or September.

Here are my varieties in order of bloom: Hemerocallis flava, the old lemon daylily, late May; H. Ajax, height 2 ft., large orange flowers, June and July; H. Anna Betscher, 2½ ft., golden yellow, July and August; H. J. A. Crawford, tall, fine, ruffled flowers of apricot and cadmium yellow, mid-June and July; H. Mikado, 2½ ft. rich orange, marked with maroon, June and July—a very fine variety; H. Hyperion, height 3 ft., large pale yellow flowers, July and August; Ophir, 3½ to 4 ft., dark golden yellow flowers, July and early August; H. Mrs. W. H. Wyman, 4 ft., clear yellow, July and August.

I removed M. Margaret Perry from the border because it was too like the old tawny daylily in color and habit of growth. Other points in favor of the daylilies are their freedom from

disease and their nice foliage throughout the entire season.

Another plant which is not too well known but which has given a lot of pleasure, is Doronicum with its yellow daisy-like flowers which bloom with the early spring bulbs. Now is the time to plant roots, while it is dormant.

Polyantha primroses may also be divided at this time, as is the case with pyrethrums. With the heat and drought which usually occur at this season, it is necessary to keep the plants watered and sheltered until they have recovered from the move. Perennial phlox—any flower for that matter—keeps in bloom longer if the old flower heads are cut off as fast as they fade. In the case of phlox, cut off just under the flower head as new flowers are formed on lateral branches from the central stem.

Smart School Clothes

(Continued from opposite page)

2785 swings into the front row in classroom fashions. Easy to make, easy to wear and adaptable to other blouses and skirts, it's practically a "must" for fall. Sizes 11 to 19. Size 15 requires 2 yards of 54-inch material for jumper; 1½ yards of 39-inch material for blouse.

PATTERN No. 8594, the campus classic two-piecer, is just right for the big games and important week-ends, for college and high school girl alike. Sizes 12 to 20. Size 16 requires 4½ yards of 39-inch material, ½ yard contrasting.

PATTERN No. 2681 is a most wearable coat for girls, besides being easy to construct. Another advantage is that the raglan type sleeve is more adjustable to the growing figure than a set-in sleeve. Pattern sizes are 8 to 16. Size 16 requires 2⅞ yards of 54-inch material for coat without nap.

By using BROTHER AND SISTER SUIT PATTERN No. 2026 your son and daughter may be as smartly alike as two peas, yet have a most Parisian air. A trimly tailored suit and crisp little girl's frock are included in the pattern, sizes 2, 4, 6. Size 4 requires 1½ yards of 35-inch or 39-inch material, ¾ yard 35-inch contrasting for dress; ¾ yard of 35-inch for boy's shirt, ½ yard 54-inch for trousers. Boy's cap pattern is No. 2812.

The older girl, 6 to 14, will glory in PATTERN No. 2623 with its inset flares which hold the skirt out smartly. Edge the collar and cuffs with circus-bright ric-rac for gay and refreshing detail. Size 8 requires 2 yards of 39-inch material, ¾ yard 35-inch contrasting, 1½ yards of braid. Pattern No. 2812 includes four hats for children, a Scotch hat, bonnet, skull cap and roll brim hat, suitable for ages 2 to 10.

With this array of good looking top clothes, the schoolgirl must have suitable pajamas and undies. BUTCHER BOY PAJAMAS, PATTERN No. 3126, are now on display in all the shops. They are so comfortable, so casual, and so smart, and can be worn with the blouse tucked in or out. Sizes 12 to 20. Size 16 requires 4½ yards of 39-inch material for short-sleeved ones.

SLIP PATTERN No. 2827 emphasizes the new-old touch with its beading and baby ribbon to peek through the sheer blouse and from under the hem. The pattern may be made up either as a slip, or camisole and petticoat. Size 12 to 40. Size 16 requires 2½ yards of 39-inch material, 1¾ yards of lace, 2½ yards insertion for slip.

To order any of these patterns: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new Fall Fashion Book.

Judy Garland tells Frank Morgan

DOROTHY OF METRO-GOLDWYN-MAYER'S
"THE WIZARD OF OZ"

(THE WIZARD)

ANYBODY CAN BE
A WIZARD AT
JELLY-MAKING!

"ALL YOU HAVE TO DO
IS STICK TO CERTO!"

1 WATCH CLOSELY, MR. MORGAN—AND YOU'LL SEE SOME REAL MAGIC! THIS CERTO IS NOW GOING TO TRANSFORM FRUIT JUICE INTO JELLY—PERFECT JELLY!

SA-AY! WHAT IS
THIS CERTO?

Judy Garland and Frank Morgan
appearing in M-G-M's new technicolor production
"The Wizard of Oz"

2 CERTO'S WHAT MAKES JELLIES JELL AND JAMS JAM, MR. MORGAN. AND IT ALWAYS WORKS—EVEN WITH HARD-TO-JELL FRUITS LIKE STRAWBERRIES AND PINEAPPLE!

SOUNDS LIKE
POWERFUL
MAGIC, ALL
RIGHT! BUT
LISTEN, JUDY—
HOW LONGS
THIS GOING
TO TAKE?

3 JUST 15 MINUTES! SEE? I BOILED THE JELLY ONLY ½ MINUTE! AND I NOW POUR 11 GLASSES FROM ONLY 4 CUPS OF JUICE—HALF AGAIN MORE BECAUSE NO JUICE BOILED AWAY!

SMART GOING, JUDY—
VERY SMART INDEED!

4 AND WAIT TILL YOU TASTE THIS JELLY! THAT SHORT BOIL SAVES FLAVOR, TOO—MAKES JAMS AND JELLIES TASTE LIKE THE RIPE, FRESH FRUIT!

NO WONDER YOU
JELLY WIZARDS STICK
TO CERTO, JUDY! AND
YOU WERE RIGHT
ABOUT THE TIME, TOO!
YOU FINISHED THE JOB
IN 15 MINUTES FLAT!

WHY 3 OUT OF 4
JELLY CHAMPIONS USE CERTO:

1. Certo is the "tried and true" pectin that takes the guesswork out of jelly-making!
2. Certo alone gives you 79 recipes—a separate tested recipe for every fruit!
3. Certo reduces boiling time to ½ minute for jellies—only a minute or so for jams!
4. Certo jellies retain fresh fruit flavor—no "boiled-down" taste!
5. Certo gives you half again more glasses—makes all fruits jell perfectly!

Look for the tested recipes under the label of every bottle of Certo—a product of General Foods.

Insist on CERTO THE "TRIED AND TRUE" PECTIN THAT TAKES THE GUESSWORK OUT OF JELLY-MAKING!

The SCHOOLMASTER

UP A TREE

MY FAVORITE tree is the hemlock, perhaps because of a good turn that one did me when I was a young schoolmaster at Ararat, in the north of New Hampshire. Indeed, I was only eighteen at the time—quite too young to be teaching school, as the reader of this story will probably think. Shamus O'Day, Losen Wheelock and Wheelock's brother Webster were the three trials that I had to contend with daily for ten weeks.

Shamus was a year and Losen two years older than I, and each was "half a head" taller. "Little Web", too, as he was called, was little only in size, not in guile or years.

I was told he was twenty-three. He looked old, indeed, but was not larger than the average boy at twelve or thirteen, being what the people of Ararat inelegantly termed "the runt of the Wheelock family."

Whatever had checked his physical growth may also have dwarfed his mind and held back the development of manly traits, for the little rascal was a veritable monkey in school. On the first day he took his seat in the back row, between his brother Losen and Shamus O'Day. Thus sheltered, this aged, abnormal rogue began his career of mischief. On the second afternoon I caught him under the desks, sticking pins in a boy's leg three rows beyond his seat. Thereupon I gave him a birching.

That flogging was the beginning of my troubles with Little Web. After a week I sent for the committee to come and turn the little scamp out of school, representing to them, truthfully enough, that I could do nothing with him. By this I incurred the bitter enmity of the Wheelocks and two other families, relatives of theirs, and gained nothing, for the committee declined to act. After that things went rapidly from bad to worse. Losen gave me to understand that he would not let me lay my hands on Web again; and the small trouble-maker entered upon an unchecked campaign of buffoonery.

Shamus was merely a great, strong Irish boy, not bad, unless incited by others. But he liked Little Web because Web made him laugh, and thus diverted his mind from the miseries of lessons, for which he had little taste.

One evening, about the middle of the term, when I sat down to the table at my boarding place, I found the following curious note under my plate:

Dear Sur. I am not one as tels tails out of scole, but them three boys up in the back sete is settin a trape for you at the scole house to nite. So you better look out. And now no more frum your tru frend.—M. A. L.

I guessed instantly that "M.A.L." was none other than my largest girl pupil—she was large indeed—Mary Ann Libby. The spelling and composition certainly left much to be desired, but the purport of the warning was not to be mistaken.

Mary Ann was disfigured by a startling birthmark, which nearly covered the right side of her face; moreover, she weighed at least two hundred pounds. But she was an honest soul, and I had been dimly aware for some time that she was on my side.

While eating my supper I took thought. If Losen, Web and Shamus were setting a trap, I decided I had better see about it.

The night was dark. Slipping out, I hastened back to the schoolhouse, but

By C. A. STEPHENS

took the precaution to approach it through a pasture on the upper side of the road.

The house stood on the lower side, where the ground fell off rapidly. The door was on a level with the road; but the rear of the house was elevated on rough stone under-pinning, seven feet high, in which, however, there was an opening, closed by a rude door, leading to a dark space beneath the schoolroom floor, where stove wood was kept.

At first I thought of concealing myself in this hole under the house; but reflecting that the boys might come there with a lantern and corner me, or find me if I hid in the school room, I determined to climb a large hemlock-tree that stood beside the road within a few yards of the schoolhouse door.

I secured a comfortable seat on a branch and waited. I sat there a long time. Indeed, I was on the point of coming down and going home when at last I heard boots creak in the frozen snow up the road. Presently, three dark figures, which I made sure were my pupils, drew near the school house and stopped at the door. They had tools. I could make out an ax, a saw and an auger.

They went inside,—for the door was never locked,—rekindled the fire in the stove and remained for some time, moving things about. I could hear them talking in low tones, but could not even guess what they were doing.

After a while they came out, and going round to the rear, went under the house. There they remained at least half an hour. I could see the gleam of light and heard them sawing.

Afterward they came back indoors again, and were going back and forth for at least an hour longer, so that altogether I had a long, cold time of

it up in the hemlock. But I had determined to remain quiet and examine for myself what they had done, after they left.

At last they went away, chuckling; and when the sound of their boots in the snow had died away I descended from my cold perch. I first went inside to the stove and warmed myself, then proceeded to investigate with lighted splinters.

In the schoolroom nothing wrong could be seen; but on going down under the house I finally discovered what they had done, but not until I had looked carefully.

From time to time, as the house grew old, the schoolroom floor had been strengthened and stiffened by props, set up irregularly beneath it. What those rogues had done was to saw off three of the wide floor boards, directly under where the pupils and I were accustomed to stand when working at the blackboard. They had also sawed off the ends of three "sleepers" on which the boards rested. The two end ones, however, remained supported by two stout props; and at first I did not see how the floor could fall—not 'till I had looked more carefully.

Then I discovered that they had set the foot of each prop on a round stone, about as large as a man's two fists. Some old, dry boughs had been thrown against the props, not only concealing the round stones, but also a loop of "bed-cord" rope, attached to each prop.

This rope extended back into the dark space behind the wood and up among the cobwebs, to a point beneath the back seat where Losen, Shamus and Little Web sat. Here a hole had been bored, and the end of the rope passed up through the floor and secured by a knot.

The nature of the trap was now fully apparent. Those scamps meant to wait for me to go to the board, then jerk away the props beneath, leaving the schoolmaster to take a sudden drop of seven feet, and disappear, heels over head, in the gulf below! It would then be a comparatively easy matter to hold the door—and I should be out of the schoolhouse and out of a job.

When I first perceived the full, fell intent of the contrivance, indignation fired my soul. Then I began to smile inwardly, for forewarned is forearmed.

I went home chuckling; and over-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines and poem must be original and written by an amateur. \$2.00 will be paid to the author of each one printed. Check will be mailed on or about first day of month following publication.

A Prayer for Courage

God, make me brave for life,

Oh, braver than this!

Let me straighten after pain

As a tree straightens after the rain,

Shining and lovely again.

God, make me brave for life,

Much braver than this!

As the blown grass lifts, let me rise

From sorrow with quiet eyes,

Knowing Thy way is wise.

God, make me brave!

Life brings such blinding things,

Help me to keep my sight,

Help me to see aright

That out of the dark comes light.

—Louise Landry,

R. 1, Irasburg, Vt.

night I concluded that I could improve on their effort. The next morning I procured some screws, a gimlet and screw-driver from a tool-box at my boarding place, and set off a little earlier than usual for the schoolhouse. Ordinarily, I went at eight, for I had the fire to build and the room to put in order.

After building a fire I brought up what wood I thought we might require for the day, and then screwed up the old door that led to the basement hole under the house so solidly that any one shut in there would have found it next to impossible to break out.

The pupils came by nine, and calling the school to order, I had them read from the Testament, according to custom. I noticed that Losen and Shamus were watching me covertly; but I proceeded exactly as usual, sending the first class in arithmetic to the board in turn, quite as if I supposed that everything there was all right, then called out the second class, to which Losen, Shamus and Little Web belonged. It was not an advanced class. They had reached simple interest that week.

"Now this is an important rule," I said, "one that you ought to master thoroughly. You will need to understand interest all through life. Let us try to make it practical. Suppose you held my note for a hundred and seventy-five dollars, dated back twelve years, to 1877. What would it amount to at the present time?"

They were all three sitting on the front seat, and could not reach the rope, so I stepped to the board and wrote such a note, in the usual form, with names, dates and rate of interest.

While writing I saw Losen stealing back to his own seat, and looked around, as if in surprise.

"I only wanted to get my arithmetic," said he, and returned to the recitation seat.

I knew better, for he had his book in his hand when he came out to recite. I took no notice of the falsehood, however, and finished writing the note.

"Now, Losen, find what that note will amount to at six per cent, simple interest, in seven years, six months and twenty-four days," I said. "And you, Shamus, tell us what I would have to pay you in ten years. And, Webster, you find what it will amount to in twelve years. There is room for all three of you at the board. I will look on and help you if you need help."

They hesitated a little, but could not well refuse. It was our usual mode of work. They felt sure that I suspected nothing, and they knew that the floor

The Song of the Lazy Farmer

WELL, here we are at home again, of all the places we have been, and all the sights we've seen, there's none that gives me so much thrill or fun, as seein' our own home once more. A feller surely sets a store on his own acres, stretchin' out, with crops a-growin' all about. I love each foot of this here land, there ain't a thing that I demand of life but just to live in peace on my own place, and git surcease from all the worry and the fret of city streets, where people get so busy rushin' to and fro they never have no time to go and sit beneath a tree and think, I'm sorry for each city gink.

It's lots more fun to feed my cows than at a night club to carouse, my pigs are better friends by far than all them city slickers are. Mirandy don't give me no lip when I eat and forgit to tip, it doesn't worry her to note I've come to meals without my coat. Then if a neighbor helps me thrash, he doesn't figger up in cash the bill for overtime I owe, or leave a load unpitched and go a-rushin' off for home to sup because his forty hours are up. Some folks may like the city street, with arches flat and achin' feet, but as for me, my life I'd pass out here with my feet on the grass.

was safe unless some one pulled the rope. So all three went to the board and began work on their sums. I walked up and down the aisle, pointing out their mistakes, for they were great blockheads.

For a time I could see that Little Web was watching me out of the corner of his eye; but I went on explaining interest to them and the others from where I stood in the aisle, 'till they had become puzzled with their computations. Then, turning suddenly, I reached for that rope knot and pulled with all my strength.

The props came away, and about ten feet of the floor, there by the blackboard, fell with a crash—and the boys with it. They went out of sight as if by magic, and left the whole school staring, terrified at the chasm.

I rushed forward, and could see the upturned faces of all three of them down in that dark hole. Shamus sprang to the old door that led out, but found

it fast. He and Losen then leaped up, and catching with their hands on the edge of the floor, tried to climb out. But I pushed their hands off with no great gentleness. "You are going to stay right there," I told them.

Then they began battering the old door with sticks of wood; and fearing that they would stave it down, I ran out, propped it on the outside with two logs, and set five of the younger boys to pile a rick of loose stones against it.

Then I sent Mary Ann home to tell her father what had happened, and ask him to ride to the village of N., four miles distant, for the three members of the school committee.

The three members of the school board and seven or eight of the neighbors and parents arrived at about half past twelve. The end of the affair, however, was rather tame, and not at all what I thought it should be. I stated the facts to the committee with vigor, expecting their sympathy; but from the outset, all three of them appeared more solicitous for the boys down in the hole than for me.

"Better let them out", they said. "Let them out, and then we will talk it over."

The senior member of the committee, a dry old village lawyer, questioned them at length. They owned up to the trap, and he contemplated the depth and darkness of the hole.

"Young master", said he, dryly, turning to me, "do you think it was quite the proper thing to pitch-hole three of your pupils down into such a place as that?"

"Well, sir," said I, "it was their necks or mine. I preferred it should be theirs."

All three committeemen regarded me with great thoughtfulness. "There must be some young schoolmasters, I suppose", one of them remarked.

In fact, the wholly pacific dispassionate attitude of the committee was very disappointing.

They questioned the other pupils, particularly Mary Ann, whose account of the matter fully established the guilt of the three culprits.

"You may dismiss school", one of the board said to me, at last. "The school agent will have to repair this large hole in the floor. But begin again tomorrow morning, and see if you cannot get along with less fireworks."

They did take Losen, Shamus and Little Web aside, however, and give them a severe reprimand.

I looked for a pitched battle the next day; but, strange to say, matters quieted down at once, and we went through the remaining three weeks of the term rather amicably.

On the last day of school, Losen, Shamus and Little Web came to shake hands with me at parting, and Shamus even blundered forth something to the effect that if I would come back the next winter they would behave better. But I never went to Ararat again.

HELEN DuBOIS, 51 Broad St., Freehold, N. J., was injured on October 27, 1938, when the automobile skidded on wet road. Mrs. DuBois sustained fractured left scaphoid bone, bruised and strained chest and bruised leg. She was totally disabled for 13 weeks. As she was past 60 years of age her indemnity was reduced one-half — \$5.00 per week instead of \$10.00 per week. Therefore, the company paid her \$65.00.

Mrs. DuBois writes us as follows: "Wish to express my appreciation for check received today in payment for my disability sustained in accident while driving my car. The added expense was considerable so the money I received helped out very much. The policy is a good investment. You have my permission to use this letter in any way you desire, also picture of my car."

Kernels, Screenings and Chaff

By H. E. BABCOCK

I HAVE NEVER been in favor of crop control. Particularly I am not in favor of camouflaged crop control through acreage allotments. *Most years, weather and not acreage determines crop yields.*

I am increasingly in favor of agricultural conservation. I believe that sound agricultural conservation methods are in the public interest and that their application to agriculture, *even when subsidized by government*, does not tend to upset good farm management. The restriction and substitution of crops certainly does.

A Splendid Action

I hail with enthusiasm the recent action of the Federal Agricultural Conservation authorities in making available to farmers who have lost their seedings in the drought stricken Northeast, supplies of seed for the restoration of these seedings. *The action the authorities have taken is primarily for the public welfare.* The restoration of lost grass seedings works out to be simply a protection of the public's future supply of food. The direct benefit to farmers is incidental.

* * *

Railroad Courtesy

Last spring I made some rather caustic comments on the service I got on a shipment of Hereford heifers from Texas. As I recall it, I reported the exorbitant prices I had to pay for hay for these animals and the fact that because one railroad tried to get the longest possible haul for itself the car of calves stood within about thirty miles of my switch for an entire day.

Now I want to report an act of real railroad courtesy. The other night the telephone rang and a man said, "This is the Lehigh. Have you got a lot of bald-faced cattle along our right of way?" "Yes". "Well, the engineer on the train which just came down through says that one of them has got her head through the fence and can't get it out."

I quote the above incident just to prove that the employees of even a big corporation like a railroad can be human. What a business builder such a touch is!

* * *

Ferdinand

The easiest and cheapest way to acquire a good beef animal for home slaughter in the Northeast is to breed a dairy cow to a beef bull. Our next neighbor some time ago bred a nice Grade Holstein cow to one of our Angus bulls. This cow dropped a bull calf, which was castrated and raised by the calf meal method. When this steer—he was black and hornless—was just a little over a year old, he was put on full feed; and between December 15, 1938 and March 27, 1939 (when he was killed), he was fed ap-

proximately a ton of a mixture of corn meal, linseed oil meal, and cane molasses, in addition to hay.

My neighbor slaughtered his steer on March 27, 1939, and now furnishes me the following report which I believe serves as a pretty good guide of what any farmer can do to raise for his family a supply of beef which is superior in quality to almost anything he can buy in the open market.

Age of steer	17 months
Live weight	1150 lbs.
Weight of hide	82 lbs. gross (70 lbs. net)
Internal fat	34 lbs.
Head and Feet	54 lbs.
Carcass warm weight	693 lbs.
Carcass cold weight	685 lbs.
Dressing percentage	59.56%

Commenting on the eating quality of this crossbred steer, my neighbor says: "Professor Hinman said that his carcass showed his Holstein parentage, but 60 per cent is a good dressing percentage and, as amateur judges, our family finds that Ferdinand is the best meat we have ever had."

* * *

Hidden Overhead

The superintendent of maintenance of a large mill has sent me the following report on a repair job in his plant:

Laborers 20 hours @ .65 per hr.	\$13.00
Handyman 12 " @ .75 " "	9.00
Carpenter 14 " @ 1.30 " "	18.20

\$40.20

Plus Insurances (per cent of cost of job)

Workmen's Compensation	9.835
Public Liability605
Unemployment	3.000
Social Security	1.000

14.440% or
\$5.80

Total Labor Cost \$46.00

I am sure the readers of this page, most of whom are farmers, will envy even the wages per hour of the laborers on the above job, to say nothing of what the carpenter got. But what I am sure will amaze all of you, as it did me, is that the insurance on \$40.20 worth of work came to \$5.80, or 14.44 per cent of the cost of the job.

* * *

Laying Fine

We have never had a bunch of hens start off as well as some 500 cross-bred pullets we bought as day old chicks the last part of January and put into the laying pens the first of July.

I always get mixed up on how to name the various crosses. I think they call these birds Rock-Reds. At any rate their mothers were Rhode Island Red hens and their fathers Plymouth Rock roosters. Since they were put in the laying house on July first, these birds have averaged to produce at a 70 per cent rate, and we have had absolutely no trouble with pick-outs or diseases. Some of the birds weigh seven pounds already.

We plan to run these birds until the Thanksgiving or Christmas holidays and then sell them. We will replace them with cross-bred pullets hatched the latter part of August.

The above pictures of our gravity dump truck in action are printed because several hundred farmers have made the trip to Sunnygables this summer just to see this truck.

The top picture shows the size load which can be CONVENIENTLY AND QUICKLY put on the truck with a hay loader by ONE man, with a boy driving. The next picture shows the truck dumped and gives a good idea of the steep angle at which it dumps.

The third picture shows the truck as the driver starts to pull it out from under the load of hay. At this point it looks as though the load would string out, but the action is all so fast and there is such a bound to the hay when it strikes the ground that as the driver pulls away he leaves a pile of hay which is an exact duplicate of the load originally on the truck.

Our boys prefer to set a hay fork on the ground to balancing around on top of a load of hay. The man who sets the fork can also operate it, if necessary.

DROUTH RELIEF SPECIAL

THE DROUTH of May, June, and July has taken unprecedented toll from most of the farmers in G.L.F. territory. Next year's hay crop is where the real pinch will be felt. Thousands of acres of new seedling are entirely lost. Old meadows and pastures will not produce the needed crops next year without some treatment.

It is essential that this emergency be met with little or no cash outlay on the part of farmers.

Farm organizations in the Northeast have asked the Agricultural Conservation Department to help out on this situation. The result has been the establishment of an emergency re-seeding program.

Emergency Aid From Government

The Agricultural Conservation Department will pay for the seed for restoring seedings burnt out by the drouth up to one-half the largest possible soil-building allowance for your farm. If you have lost a seeding and will have time to re-seed in the next two or three weeks, act now:—

1. Report to your County Agent or Agricultural Conservation Committeeman.

2. If it is determined that one or more of your spring-seeded pieces is entirely lost, you will receive a seed order.
3. Take the order to your G.L.F. service agency or to any dealer on the A.C.P. approved list.
4. Get the seed. The A.C.P. will pay for it.
5. Sow it immediately. (Seed must be sown before September 10 to meet the requirements of the program. If possible it should be sown even earlier to give it the best possible chance of making a stand.)

SEEDING ENTIRELY LOST
This field should be re-seeded with one of the approved mixtures.

Good Seed Bed 'Important

Every day's delay in getting the seed sown increases the risk of legumes winter-killing. Where

it is possible to work up a good seed-bed with a disc or harrow, this method is preferable to plowing because it conserves the moisture in the soil. The seed should be covered after sowing, preferably by rolling.

Additional Drouth Measures

Save Damaged Seedings

Many seedings are badly hurt, but not completely burned out. They will have a good chance of thickening up if there is enough rain from now on. They should be top-dressed with manure. Superphosphate might well be added if it has not already been used on the grain crop.

Old Meadows and Pastures

Much of the damage to meadows and pastures will not show up until next year. Where manure is available beyond the needs of the new seeding it will help restore their productivity. (On pastures manure should not be used later than January 1.) Use Superphosphate with the manure if not previously used in the rotation.

If you expect to be short of hay in the spring, it may be cheaper to treat a pasture field in order to provide early grazing so as to buy less hay. Use 100 lbs. of Uramon or 200 lbs. of Ammo-Phos per acre as soon as the snow is off.

In case it is necessary to leave down an old hay field which in the normal rotation would be going back into crops, it will be advisable to treat such a field also with Ammo-Phos or Uramon early in the spring.

Emergency Crops

A bushel of rye, winter wheat, or winter barley and a peck of vetch per acre will provide some pasture this fall and good early grazing next spring. Rye and vetch also makes an excellent silage crop—it can be put into the silo without adding molasses or phosphoric acid. The combination can also be used as hay.

Seedings that look doubtful now may look satisfactory by October. If they don't they can be plowed up and seeded next spring with oats to cut for hay.

SEEDING DAMAGED
There is enough clover here to make a good stand if it gets rain. Top-dress this fall with manure.

Ag. Conservation Reopened

The 1939 Agricultural Conservation program has been reopened as an emergency measure:

1. If you are already participating but have not used up all of your allowance you may now undertake additional practices if you wish.
2. If you are not yet participating you may join at this time and take part in the 1939 program.

Some of the practices approved for payment under the program are excellent drouth relief measures. Note especially the payment of \$1.50 per acre for seeding rye and vetch as a cover crop. This payment may also be allowed in some areas if the rye and vetch is used for pasture or silage.

Emergency Program In Brief

No Cash Outlay

1. Seed furnished by A.C.P.
2. Your labor
3. Manure if available

Small Cash Outlay

4. Superphosphate if not already used
5. Nitrogen on old meadows
6. Top-dress a few acres of pasture

Remember last winter? Enjoy Happy Heating next winter **ACT NOW!**

AN ALLOWANCE OF \$25 and up ON YOUR OLD HEATER OR STOVE

For one month only, an allowance of \$25.00 and up on your old heater and stove, no matter what its condition. This offer is made to get thrifty people to take care of their winter heating requirements right now, before the fall rush starts.

UTICA HEATING SYSTEMS are economical, both in first cost and in the amount of fuel they use. They will assure you complete heating equipment and you can install one right now, for as little as \$10.00 a month, and as long as 3 years to pay. Don't neglect this opportunity to secure happy heating on easy terms and at comparatively small cost. Send the attached coupon today.

STEAM or HOT WATER BURN COAL, OIL or WOOD NO DOWN PAYMENT—FIRST PAYMENT IN NOVEMBER

You can secure any type of UTICA HEATING SYSTEM you desire... steam, hot water or vapor... to burn coal, oil or wood. UTICA HEATING SYSTEMS are noted for their scientific design, economy of operation and lasting quality. With a UTICA HEATING SYSTEM, you can be sure of a comfortably heated home for many years to come. Our dealers can change over your present heating plant without fuss or bother and while prices are right and mechanics available. Install a UTICA HEATING SYSTEM now while labor and materials are at their lowest.

AUTHORIZED DEALERS EVERYWHERE

UTICA dealers are skilled heating men and they will gladly make an analysis of your heating conditions to determine the best type of heating system for your particular home, without obligation to you. All UTICA HEATING EQUIPMENT is **BACKED BY A GUARANTEE BOND!** Don't miss this opportunity to investigate, without obligation, how reasonably you can install a fine new UTICA HEATING SYSTEM on easy terms.

By Gorry, WE'VE GOT 'EM!

AROOSTOOK COUNTY POTATO EMPIRE

By E. R. Eastman EDITOR OF AMERICAN AGRICULTURIST

WHETHER it's big potatoes, majestic scenery, or fine folks, the State of Maine has them and to spare. If you don't believe me, ask any old State of Maine man, and he'll likely tell you with considerable emphasis, "By Gorry, we've got 'em!" If you don't believe him, go to Maine and convince yourself, as I did a week or so ago.

In company with the Farm Credit Board of Directors and officers, I spent several days in Maine, visiting farmers and their cooperative organizations in order to learn more about Maine farming and its problems. I have had the privilege of being in Maine several times. In fact, any part of New England seems like home to me, but I never saw northern New England looking better than it does this summer. It is strange how climate and moisture

Harvesting the clover in Aroostook County, Maine. Most of it is turned under for green manure.

(Left): A bird's eye view of Aroostook County, Maine, land of potatoes, clover, oats, beautiful farm homes and fine people. Mountains in the background are in Canada.

(Left): Showing the almost unlimited extent of the Aroostook County, Maine, potato fields. The sprayers are started when the potatoes come up and are kept going as long as they are green. "Pick-ups" on the machines raise the vines so that comparatively little top injury results. Dusting by airplane is occasionally used.

distribution varies. While southern New York and New England have been suffering one of the worst droughts in years, Maine vegetation is as green as it was in June. It has been a splendid growing year, with just the right mixture of rain and sunshine.

I doubt if even Maine folks themselves realize how far north they are. Take a look at the map and see how that great empire of Aroostook County crowds northeastern Canada off the map. When you consider that almost all of Maine is farther north than any other part of the United States except Alaska, you realize what a good trading job that old Yankee, Dan Webster, did when he got into the horse-trade with Lord Ashburton, the Englishman, and, according to the story at least, got Ashburton drunk and traded him right out of his eye teeth by getting most of the (Turn to Page 13)

The Struggle to Raise Milk Prices—See Page 5.

NORTHEASTERN *Slants* ON THE *National* NEWS

■ Thanksgiving Redated

CONSIDERABLE opposition, except among business men, has greeted President Roosevelt's decision to change date of Thanksgiving from last Thursday in November to November 23. Reason for moving it up a week, said President, was to make more Christmas shopping days.

Most Governors of States have power to proclaim Thanksgiving day in their own States, and a number of these—particularly New England Governors—are against the change. If they decide to stick to traditional date, country may be faced with two Thanksgiving dinners, which turkey growers say will be all right with them.

Business men say that longer Christmas shopping season will mean a billion dollars additional business in manufacturing and distributing lines. Football coaches, on other hand, are out of luck, as some of season's biggest games are scheduled for November 30, date on which Thanksgiving would have fallen. If games are played as now scheduled, teams will have to play their biggest game on ordinary week day without usual holiday crowd—which it is figured will reduce gate receipts at least one-half.

From its origin up to Abe Lincoln's time, Thanksgiving Day has been a movable feast. Since Civil War, it has always been observed on last Thursday of November, mainly thanks to efforts at that time of Sarah Hale, editor of Godey's Ladies Book, who conducted a campaign to stabilize the date through popular appeals and petitions to Congress.

■ Gives Wage-Hour Rules on Farming

LENGTHY bulletin, clarifying Wage-Hour Law's application to agriculture, was issued last week by Wage-Hour Administration. (Act exempts from both its wage and hour provisions some farming operations, lists others that are subject only to regulation of hours, and exempts seasonal work from the hour provision for 14 weeks a year; also exempts workers employed in first processing of farm products. However, Act leaves it to Administrator to decide what operations fall under various general agricultural exemptions. Some of his interpretations have caused direct hardship to farmers, and last session of Congress brought strong drive—which failed—for passage of amendments to Act to safeguard farmers' rights.)

Bulletin now issued covers nearly all branches of farming and allied operations. According to it, the following farm workers and operations are exempt from provisions of Act:

Persons engaged in processing of fresh fruits and vegetables (but not processors of nuts).

Growers and handlers of tomatoes, (but not canners of tomatoes).

Employees of farm operated experimentally in connection with a factory.

Persons engaged in breeding, fattening, feeding and general care of cattle, sheep, horses, mules, jackasses or goats (but not persons engaged in feeding livestock at stockyards).

Persons engaged in raising certain fur-bearing animals, including rabbits, silver foxes, minks, squirrels and muskrats.

Exemptions from hour provisions are

granted to workers engaged in "the first processing" of milk, whey, skimmed milk or cream into dairy products, canning or packing of perishable or seasonal fresh fruits or vegetables or in handling, slaughtering or dressing poultry or livestock.

Dairying was declared to include work of "milk cows or goats, putting the milk into containers, cooling it and storing it on the farm."

Bulletin also says that "if a farmer and his employees engage in such operations as separating the cream from milk obtained from the farmer's own cows or goats, bottling such cream or milk or making butter and cheese out of such milk and cream, those operations also fall within the exemption."

Listed as NOT exempt from the law were: Processing of poultry meat for packing and canning purposes, drying of eggs that have been broken and separated, breaking, separating, mixing and freezing of eggs; canning and making of vinegar, canning of baked beans, chili and tamales; repacking and recanning fruits and vegetables, producing wine from grape juice, storing of fruits and vegetables in a storage house; manufacturing of leather, baking of bread, manufacture of rope from hemp and the making of cigars.

SLANT: This new bulletin defining Act's application to agriculture is an improvement, but there should be no let-up in efforts of farm organizations to obtain passage of amendments to Wage-Hour Act. Bulletin's rules are after all a matter of opinion handed down by Wage-Hour Administrator, which may be subject to change or misinterpretation. What agriculture needs further is a clear statement in the law of specific farm operations which are exempt from its provisions.

■ Committee Digs Into Un-American Activities

SPECIAL House Committee investigating un-American activities in this country has resumed hearings after several month's recess. During one whole day, Committee quizzed German-American Bund Leader Fritz Kuhn about Bund's purposes and activities.

Rep. Starnes of Committee brought out that Kuhn visited Germany in 1936 with a uniformed group which paraded the streets; that he had an interview with Hitler and gave him \$3,000 raised by voluntary contributions for German "winter relief".

Membership in the Bund, said Kuhn, was around 20,000, with entrance fee of \$1 and regular dues of 75c a month. Entire annual income from dues and voluntary contributions, he placed at \$900,000. Kuhn admitted that membership lists of organization were destroyed about a year ago, because of fear of Federal investigation. Other records of the organization are now being held by District Attorney Dewey, who has them in connection with New York indictment charging Kuhn with misappropriation of funds.

A star witness against Bund was Miss Helen Marie Vooros, of Brooklyn, N. Y., a former member of Bund, who said she resigned because of immorality displayed in bund camps in America and because of efforts made to turn her against government and people of United States. Miss Vooros contradicted Kuhn's assertion that German-American Bund had no ties with Nazi Germany. She testified that reports of Nazi progress here were made regularly to

Germany; that propaganda material was shipped here in great quantities, and that German ships stood always ready to take away any agents caught at their work.

Miss Vooros further testified that Kuhn was generally recognized in Germany as the American Fuehrer, and that Bund members were taught to regard him as their national leader. They were ordered, she said, to hate all Jews and all religion. Miss Vooros told of being sent to Germany with other Bund members for training in a Nazi camp. There, she said, they were taught that Hitler was the leader of every German throughout the world, and that after Germany had taken Czechoslovakia, Danzig, and all the Scandinavian countries, the Nazis intended to turn their attention to America.

■ Biggest Power Deal

TWO FORMER Indiana farm boys recently took part in biggest transaction of its kind ever made in this country, one which put Federal government in power and light business in a big way in State of Tennessee. They were Wendell L. Willkie, now president of Commonwealth and Southern Corporation, and David E. Lilienthal, power director of Tennessee Valley Authority. When government's check for TVA's share of purchase price of Commonwealth and Southern's Tennessee properties was handed by Mr. Lilienthal to Mr. Wendell, latter remarked, "Dave, this sure is a lot of money for a couple of Indiana farmers to be kicking around!"

It was a lot of money for any one to be kicking around—\$44,729,300. Rest of purchase price of \$78,000,000 was paid by Tennessee cities, towns and electric cooperatives. Sale marked end of a six-year fight between TVA and private utilities supplying Tennessee Valley, and beginning of complete government ownership of public power facilities in Tennessee.

In statement issued by Mr. Willkie, he said:

"We sell these properties with regret. We have been forced to do so because we could not stay in business against subsidized government competition. We now turn over to government agencies, for about four-fifths of its real value, one of finest public utility services in the country." Pointed out by Mr. Willkie was fact that his company has paid millions of dollars of taxes into local, State and Federal treasuries, and that whenever government takes over a private business, public loses benefit of taxes paid by that business.

SLANT: More government, more bureaucrats, and more politicians in business—a big step backward in progress.

■ Opportunities In Alaska

AMERICA'S "last frontier", Alaska, still offers rich rewards to pioneers, according to survey of its resources made public recently by Secretary Ickes. Government report on survey describes in detail advantages to be derived from development of Alaska's natural resources, and suggests partnership between government and privately financed corporations.

Report points out that resources of Alaska and United States are very different and therefore there would be little competition in their products. In fact, says report, products of Alaska are, in large part, products "which we now import from Asia and Europe, and their development will help to make United States economically independent in event of war." Among such

products are tin, of which U. S. imported in 1937 nearly all which it used; newsprint, 77.3 per cent imported; herring, 94.4 per cent imported; canned crab meat, 94.4 per cent imported; also, various types of fur, leather, paper and wood products.

More than 98 per cent of land in Alaska is still public land, available for homestead settlement, trade and manufacturing site purchase, town site purchase, grazing lease, mining, fur-farm lease, or timber lease.

■ Germany and Russia Get Together

DRAMATIC TURN in events in European situation came during fortnight with news that Germany and Russia have buried the hatchet and have signed treaty not to make war on each other. This followed on heels of announcement of 7-year trade pact between the two countries. As we go to press, hopes of Britain and France to draw Russia into their stop-Hitler bloc look next to nothing, and outlook for Europe's peace is reported blackest since 1914.

Hitler's demand for return of Free City of Danzig to Germany, now extends to whole Polish Corridor. Germany's preparations for war are complete, with 2,000,000 men mobilized. Her troops have already moved bag and baggage into little country of Slovakia, which extends for 200 miles along Poland's southern and weakest frontier. So far, word from Poland, where 1,000,000 men are under arms, is "No surrender!"

Poland's sworn allies, Britain and France, have announced that new German-Russian treaty will not keep them from keeping their pledge to Poland, if she is attacked by Germany and decides to resist. British Parliament has been summoned to special session and is expected to rush through an emergency bill, conferring sweeping wartime powers on government. More men are being called to colors in both Britain and France.

Fear of immediate outbreak of war is causing many Americans to sail for home. Question of safeguarding interests of the 100,000 Americans over there, and of getting them back to this country, was discussed at special meeting of high officials of five government departments, held day after announcement of German-Russian pact.

SLANT: Is the one-time famous British diplomacy slipping? It would seem that the dictators are outguessing and out-bluffing the British diplomats at every turn. Each time that Germany or Italy wins in diplomatic moves, it makes them that much more difficult to deal with next time.

Good Books to Read

THE VEGETABLE COOK BOOK, Cora, Rose, Bob Brown. A new cook book is always an adventure to the housewife—and the office wife too—and this one is just filled with old and new ideas for cooking vegetables, arranged in handy alphabetical order. And the Browns don't stop at recipes, either, for included are hints on garden care, canning, preserving, and the use of the wealth of frozen vegetables now on the market.—J. B. Lippincott Company, Philadelphia. \$1.75.

Good Movies to See

THEY SHALL HAVE MUSIC. Bringing you the music of Jascha Heifetz in an unforgettable picture. A picture overflowing with freckle-faced, snub-nosed boys and girls who bring earnestness to their acting and to music that the audience has known and loved from childhood. Also in the cast are Joel McCrea, Andrea Leeds, and Terry Kilburne.

RUNNING WATER

Do You ENJOY IT,
or Do You MISS IT?

THERE is an old saying that in Colonial times it took three mothers to raise an average farm family. Doubtless one thing that made farm women grow old before their time was close acquaintance with the pump and water pail.

Perhaps it was necessary once, but now an electric motor or gas engine will pump water for 2 or 3¢ an hour, and who can afford to operate a pump handle for that? It is surprising how much water is used when it is available at the turn of a faucet. Use the following table and see how many gallons a day are needed on your farm:

Needs of	Gallons per day
Each person (kitchen sink only)	8 to 10
Each person (sink, bath, and laundry)	25 to 35
Cow (milking)	15 to 20
Horse	10 to 12
Sheep	1 to 2
100 hens	3 to 4

Certain it is that no other farm improvement offers so much in the way of comfort, health and profit.

Tests show that in the winter cows in a barn equipped with drinking fountains will produce 10 per cent more milk than those that are turned out to drink. Poultrymen will agree that water is the most important part of a hen's diet, and more and more attention is being given irrigation. Seldom or never is there a year when there is not a dry period during which irrigation will increase yields. A severe drought year is just the time when prices for fruit and vegetables are high.

Yes, running water is profitable, but it also pays big dividends in health and convenience. Who is there who needs a power-driven washing machine more than the farm housewife, or after a day spent in threshing, silo filling or cultivating crops, who needs a bathroom more than a farmer? Last, but by no means least, there is the matter of fire protection. Constant close connection with danger tends to breed indifference to it, but fire is a constant menace to farm buildings,

and in too many cases there is next to no protection.

Every farm furnishes its own problem when it comes to providing running water. Pressure is essential and depending on circumstances can be supplied by gravity, a ram, an electric motor or a gas engine. Records show that the percentage of farms with running water is greater in the hill country than it is on the level. The answer is that springs on hills at elevations higher than the buildings provide a cheap and simple method of supplying water by gravity, usually with a storage tank in the attic or the haymow. This system has its limitations. Storage tanks may leak, or sweat in hot weather, yet thousands of such installations are giving satisfactory service.

When a sufficient supply of water is available, but at a point lower than the buildings, it is sometimes possible to install a ram which uses the power of falling water to deliver about five per cent of the water to a storage tank placed high enough to deliver pressure to the buildings. The installation of a ram has to be studied and laid out by someone who knows rams, and frequently the supply of water is not big enough to deliver a sufficient amount to meet the needs of the farm.

For pumps no power is quite as handy as electricity. Hooked up to a pump and a small pressure tank, the pump is automatic, going to work as soon as the pressure in the tank is lowered and stopping when it is built up to the right point. Gas engines are available that will stop automatically, but they must be started by hand, which is somewhat of a nuisance, particularly if the pump is not in the house. It is also necessary to provide a bigger storage tank so the pump doesn't start and stop so often.

With a shallow well or cistern, the pump and tank are commonly placed in the cellar, but up to recently the problem was complicated where the well was deep and the water had to be raised over 25 ft. Now, however, engineers have developed what are called jet pumps which can be used in deep wells and have all of the advantages of shallow well pumps and none of the disadvantages of deep well pumps. They are easier to install, and although the well may be at some distance from the buildings, it is still possible to have the pump in the cellar.

Necessity has forced farmers to be general handymen, and many water systems have been installed largely or entirely by family labor. The important consideration is to get all available information before you rush ahead in order to avoid costly errors and to get a system that will be most satisfactory for every dollar invested.

In this connection another development is important. Copper pipe is now available in 60 ft. coils in practically every diameter. The cost will be from 15 to 25 per cent more than galvanized pipe, but you will make up most of this by savings in installation. The pipe is easily bent, which practically eliminates the necessity for many fittings, and copper pipe of any diameter has less inside frictional resistance and will, therefore, deliver more water than a galvanized pipe of the same size. It is a very simple matter to install a water system with copper tubing.

In western New York this fall, Farm and Home Bureaus, the State (Turn to Page 17)

—Reproduced from Cornell Extension Bulletin 392.

(Above): A simple installation of an automatic pump operated by electric motor, used in pumping water from a shallow well where the pump is not over 20 ft. above the surface of the water. The pipe from the cellar to the well is placed in drain tile so it can be easily removed.

(Above in circle): Running water is practically a necessity where pullets are raised on range. This fountain on the farm of Fred Corliss of Sherman, Maine, has an automatic float which regulates the level. A short length of pipe is connected by a rubber hose to a pipe laid in a shallow furrow. This allows the fountain to be shifted so that the ground around it does not become waterlogged.

This method of drawing water may be picturesque and the cost of equipment low, but that ends its list of advantages. It is time-consuming, and neither the family nor the stock are likely to get the full amount of water needed for health and comfort.

(Above): Running water in the barnyard of Harold Tripp, Dryden, N. Y., provides water so cows can drink to their hearts' content. Water buckets are also provided in the stables.

THE *Editorial* PAGE

BY E. R. EASTMAN

Address all mail for Editorial or Advertising departments to American Agriculturist, Savings Bank Building, Ithaca, New York.

Our Platform

WE HAVE adopted the following platform as the four most important jobs to be accomplished in order best to promote the welfare of Northeastern farmers:

- (1) Better prices for farm products.
- (2) Lower farm taxes.
- (3) Good living.
- (4) More fun for farm folks.

Number 1 needs no explanation. Everyone familiar with farm conditions knows the hardship which farmers have suffered now for many years and the crying need for better farm prices. It seems to me that there are at least three ways to bring these better prices about. First is the correction of our monetary system in order to make the dollar honest. This would put prices for basic commodities which farmers produce on a level with prices which they have to pay for their farm and family supplies and labor.

The second way to bring about better prices is to improve marketing methods. This can be done (1) by giving even more attention to the quality of the products which farmers produce so as to give the consumer what he wants when he wants it; (2) by obtaining and using more information about current markets and their trends, and this is one way in which *American Agriculturist* will help out; and (3) by better farm organization so that the farmer can sell in groups and in quantities instead of individually.

Our platform plank for lower farm taxes also needs no explanation. All you need to do is to look at your tax bill and compare it with that of even five years ago. *American Agriculturist* intends to continue to hammer away at this problem of ruinous taxes.

Good living, our third plank in the editorial platform, needs a separate piece to explain. This you will find in another place on this page under the subject of "Good Living."

More fun, the fourth and last platform plank, expresses the belief of the entire staff of *American Agriculturist* that farm people work too hard for too little, have too little recreation and too little fun. There is no point in living unless one gets a little happiness out of life as he goes along. So, from time to time, *American Agriculturist* is going to continue to emphasize how to have fun on the farm, how to find a hobby and to get time to ride it, how to manage to get a little recreation, how to learn to appreciate and enjoy some of the things that God has given us, even though we have little or no money.

Good Farm Living

ONE OF my good memories of my boyhood farm home is those times, usually on Sunday, when company came. About the first thing that Mother did, if it were late summer or fall, was to take her women friends down cellar to look at the long rows of full fruit cans, the jars of cucumber pickles and the other products of the orchard and garden which she had canned in the hot summer kitchen in order to enrich her table when winter came.

Now we have swung to the other extreme. It has become an age of specialization even with farmers. We have stopped diversification in order to devote all the time and work to one specialty. The family fruit orchard has too often disappeared, the garden in many instances is a neglected weed spot, some dairymen even crowd the last quart of milk into the milk can and buy oleo; and with lots of exceptions, of course, the farm family eats much of its food out of tin cans.

On the other side of the picture I have a friend

who has just bought a small farm. For years he has worked out by the day during the summer and has had little income during the winter.

The other night he made me positively hungry by telling me how he and his wife prepare to feed a large family during the winter. With the coming of the first fruits and vegetables they start canning, and they continue to put up stuff as long as there is anything left to can. He has always raised enough potatoes, cabbage and other vegetables for their own use. This fall he will have a pig to kill and a fat calf. His two cows furnish all of the milk that the family can use, with plenty of butter and good old-fashioned Dutch cheese.

Not only is this man able to keep his living expenses down, but I will guarantee that he sets a better table than thousands of farm families who have better opportunity.

I am positive that returning a little toward the customs of our fathers and mothers in making the farm furnish more of the living is a partial answer to our economic troubles, and at the same time it makes for a better living.

I predict that the use of more home-grown products is coming back—for one reason because farmers absolutely must cut down expenses, and for another because of quick freezing processes.

I know a farmer who has installed one of these quick freezing refrigerators. As a result, the richest family in the land does not live better than his does. When he has too many roosters, they can be killed at one time, frozen and kept indefinitely for use when they are needed. The same with other meats. He has berries and other small fruits at almost any time, just as fresh as when they are picked. Sweet corn, instead of being limited to the day it is picked, can be frozen and its qualities preserved as good as when it came off the stalk.

So when you hear us talking about a good farm living, this is what we mean, and you are going to hear a lot more of it from now on in *American Agriculturist*, because I know it means more happiness for the farm family.

He Cured Him of Trespassing

AFARMER friend told me the following story of how he cured one city man of trespassing:

"One Sunday", said my friend, "a city fellow with his family stopped beside my place, unloaded a lot of papers with a picnic lunch and, without asking permission, proceeded to eat their lunch on my lawn. When they were through, they did not bother to dispose of the loose papers and garbage.

"I got the license number from the fellow's car, found out who he was and where he lived, and the very next Sunday I told my family we were going on a picnic and to put up a good lunch. We ended up in the city on my former visitors' lawn, unloaded and started to eat our lunch there. Whereupon the fellow came charging out of the house and wanted to know what the heck we thought we were doing. That was my grand opportunity to tell him a few things, which I proceeded to do.

"I concluded by asking him what the difference was between his eating on my lawn in the country and my eating on his lawn in the city. He saw the point, laughed and apologized, and we parted good friends."

The bad trespasser who thinks he owns everything in the country, who never bothers to ask permission to do anything, who in general is a bad sport, makes it very difficult for farmers to

grant privileges to good sportsmen and country lovers who behave themselves. The worst offenders among trespassers are not usually hunters and fishermen. They are picnickers, those who get in the swimming holes and yell the whole afternoon of a quiet Sunday, and the petty thieves who steal fruit and vegetables.

One answer to the problem is for the farmer to post his land and to arrest and prosecute the bad offenders. New York and several other states now have posting laws that have real teeth. Good sportsmen and conservationists can do much to maintain their privileges on farmers' lands by cooperating with the farmers to discourage the bad trespassers.

Last year the Monroe County (N.Y.) Farm and Home Bureau News published some rules adopted by the Genesee Conservation League, which could well be adopted and followed by everyone who loves the outdoors. Here they are:

REMEMBER!

Hunting and fishing on the farmer's lands are not rights, but privileges granted by him.

Remember that he is your friend. Treat him as such. Remember to ask permission to enter upon his premises.

Remember not to shoot towards his buildings, stock or fowls.

Remember not to trample down his crops.

Remember to close gates and bars.

Remember to go out of your way to protect his property.

Remember to guard against forest fires, watch your step, and be a good sport.

Another Tax Problem

BRANCH line railroads are rapidly disappearing, and with their going comes another tax problem of direct interest to every rural resident.

Railroads, like farmers, are heavy tax payers. Taxes they pay have been a material support to local government. After they are gone out of a community, who pays the additional taxes? Answer—the farmer.

This is just one more reason why *American Agriculturist* is going to continue to fight to get some of the ruinous tax burden shifted off from farm real estate.

Eastman's Chestnut

MY BROTHER Albert tells an old country story of an experience that happened to him when he was first married back in the horse and buggy days.

Albert wanted a job on a farm. He heard of one some twenty miles away and hired a horse and buggy to go to visit the farmer. Now, that hoss, according to Albert's tell, was something at which to marvel. He had a backbone that stuck up like a razor, his legs were covered with nobs in places where nobs ought never to be. He was blind in one eye and had the heaves. In some way or other Albert managed to pole him along until he was going up a long hill near his destination. The horse would climb the hill a few steps, and then would have to stop to rest and breathe. Coming down the hill was a farmer who stopped briefly, with his eyes popping out, to look at the horse. Then, without saying a word, he went on again.

Albert and his young wife finally got to the place where they were going, and shortly turned around to go down the long hill on the way back home, when they met that same farmer coming up the hill. The horse stopped and the farmer stopped. He stood with his mouth wide open for a moment, and then said: "My gosh! He's still alive!"

The Struggle to Raise Milk Prices

A Statement of the Present Dairy Marketing Situation in the New York Milk Shed

I. For years dairymen have suffered from a starvation price for milk.

II. These low milk prices have been partly due to the worst period of hard times for everybody that America has probably ever seen—a period which has now continued for ten long years. With a general price level that has been ruinous to both business and agriculture, and particularly to producers, like farmers, of basic commodities, no really satisfactory permanent price for milk, fruit, wheat or any other farm product can be expected until general prosperity and consumer buying power return. All that can be hoped for is to keep milk prices a little above the general price level.

III. Various milk marketing plans have been tried in recent years to raise milk prices. Some of these have succeeded for a spell in keeping milk prices up with or a little above the general price level, *but all finally failed for the same reason—because farmers did not stand together and because of opposition of at least some milk dealers and others who are determined to rule or ruin and to buy milk at a starvation price.*

IV. Faced with these ruinously low prices last spring and summer (1938), dairymen of the New York milk shed appealed through their organizations to the federal and state governments for a Milk Marketing Agreement. The proposition was put before the dairymen of the milk shed at several hearings and in other ways, and 87 per cent of the dairymen voted for this Marketing Agreement. It went into effect September 1, 1938, and immediately prices to farmers jumped 50c a hundred. These prices continued fairly good until lower courts of both the federal and state governments threw the Marketing Agreement out. THE ACTION IN THESE COURTS WAS BROUGHT BY THIS SAME GROUP OF DEALERS, SUPPORTED BY OTHER SELFISH INTERESTS, WHO HAD REFUSED TO COMPLY WITH THE MARKETING ORDER AND WHO WERE DETERMINED TO RUIN IT IF POSSIBLE.

V. The moment the Marketing Agreement was thrown out, milk prices to farmers slumped. The same old chiseling, price-cutting game started in the cities, and the farmer paid for it with such low milk prices during the past spring and summer that dairymen have become desperate.

VI. As soon as the lower courts declared against the Milk Marketing Agreement, dairymen and their organizations appealed the decisions to the highest courts in both the state and the nation, and both reversed the decisions of the lower courts and put their approval on the Milk Marketing Agreement. But this took time and in the meantime dairymen were suffering. The moment, however, that the courts approved the Marketing Agreement, steps were taken to put it into action again in the New York milk shed. As a result it went back into effect on July 1 of this summer, with material increases in prices to dairymen.

Worst Drought in History

VII. Added to dairymen's troubles, there has occurred in many sections of the Northeast the worst drought in our time. Hay in many counties was half a crop or less, pastures have burned out, seedlings have failed, silage corn has made poor growth. Dairymen in many dairy counties are feeding hay and grain as heavily as they do in the winter, and the hay supply of some farmers is already exhausted. The result then of this drought situation is that the prices in the Marketing Agreement, set before the drought became bad, are not nearly high enough. So the dairy-

men's organizations appealed to the federal government for a hearing to prove that milk prices in the Order must be immediately raised to meet this great emergency.

VIII. Answering this appeal, officials of the United States Department of Agriculture and the State Department of Agriculture and Markets held such a hearing in Syracuse, Thursday, August 24, and most of the day was spent by farmers and their representatives showing the Department officials the bad drought situation in the New York milk shed and asking for amendments to the state and federal Marketing Orders for increased prices for the fall and winter to meet the emergency. A second hearing was held in New York City August 25. A full explanation of the amendments in prices for milk for fall and winter months is given below. There is every expectation that the Department of Agriculture will grant these prices because they are based on justice and great need.

IX. IF THESE EMERGENCY PRICES ARE GRANTED AS REQUESTED, THEY WILL GO A LONG WAY TO RESTORE CONFIDENCE OF FARMERS IN THEIR BUSINESS AND WILL INSURE THESE IMPROVED EMERGENCY PRICES, NOT ONLY FOR ONE MONTH, BUT DURING THE ENTIRE FALL AND WINTER, CARRYING FARMERS THROUGH TO ANOTHER PASTURE SEASON.

The Milk Strike

X. In the meantime the Farmers' Union, not waiting for the government hearing to raise prices in the Marketing Agreement to meet the emergency, called a milk strike on August 15. It is charged that the same milk dealers who have constantly fought the Marketing Agreement from the beginning helped to start the strike and were in sympathy with it. Some of these dealers had been ordered by the Supreme Court not only to comply with the Marketing Agreement but to pay up dairymen's money which they had formerly withheld. There is some evidence to support the claim that these dealers helped the strike in order to break the Marketing Agreement because some of them a day or two after the strike started, received their full supply of milk and continued to get it to the end of the strike.

The radical city labor organization, Committee for Industrial Organization (C.I.O. for short), cooperated in the strike. It is claimed by farmers who opposed the strike that much of the violence and law-breaking were due to C.I.O. leadership. It is claimed, also, that the C.I.O. organization nationally is closely allied to the Communist Party. Certain it is that Mr. Isidore Begun, a Communist leader, appeared on the witness stand at the hearing for raising of prices in the Milk Agreement at Syracuse on August 24. He said that he represented the officers of the New York State Communist Party and that he was there to put his organization back of farmers.

Results of the Strike

XI. After nine days, during which the strikers were able to shut off an appreciable supply (nobody knows just how much) of milk for New York City, a conference was held by Mayor LaGuardia of New York City, dealers and farmers' representatives, and an agreement reached and the strike ended.

During the strike, conditions almost approaching those of Civil War occurred in some dairy communities. Picketing was prevalent, much milk was dumped or ruined with kerosene or otherwise, fences were cut and cows let in to

destroy corn. There was considerable rioting, and in some instances there was shooting and serious bodily injury.

The Milk Price Situation

XII. Because some of the classification prices depend upon the uses made of the milk and the current prices of the products into which the milk goes, it is impossible to predict what future prices will be under the Milk Marketing Agreement. The July price to farmers was \$1.50 for 3.5 milk at the 200-210 mile zone. The August price is not yet figured at this writing, but will of course be considerably above the \$1.50 July price, and the September price to dairymen still higher.

At the hearing in Syracuse on August 24 before the federal and state officials, four emergency amendments were asked. Number one would raise the price of Class I milk from \$2.25 to \$2.82. Number two would raise the price of fluid cream from \$1.55 to \$1.90. Number three would add 30c to the price of Class II-B (plain condensed milk and cream for ice cream mix) as figured under the present Marketing Agreement. Number four would add 30c to the price of Class III-B (frozen cream) as figured under the present Marketing Agreement.

In addition to these amendments, President Fred Sexauer of the Dairymen's League Cooperative Association proposed that the present schedule for Class I and Class II-A prices be made the same for summer months as for winter months, because, summer being a surplus season for butter, prices for butter are usually lower, which would automatically take care of the Class I price without also having a separate schedule for Class I prices for April, May, June and July. This proposal, if adopted, would materially raise summer prices.

Also very important is the request of the dairymen that the prices suggested in these proposed amendments be not for one or two months but for the entire fall and winter so that a dairyman can be assured of fair prices during the short feeding season ahead and be carried through until pasture time.

The Farmers' Union Prices

As we understand it, the Farmers' Union struck for a flat price of \$2.35 to producers for August, September and October. The Union also demanded that all milk be sold on this basis and that the classified plan be eliminated.

Demanded also was that dealers deduct 1c a hundred at plant, to be paid to the Farmers' Union as dues.

Another demand was that diversion payments to dealers for trucking milk to plants to be manufactured, be modified or eliminated, and that payments to cooperatives for services rendered under the Agreement be eliminated or made uniform to all cooperatives regardless of the amount of service rendered.

As we understand the final settlement at the conference called by Mayor LaGuardia, the Union succeeded in obtaining none of its demands except a price which was lowered from the original demand of \$2.35 to \$2.15.

Regarding the Union's demand that the price classification be eliminated, it is reported that Union officials finally conceded that milk had to be sold under the classified plan.

Another feature of the Union agreement is that if the price under the Marketing Agreement exceeds the \$2.15, the dairymen will receive the higher price. This would indicate the belief of Union leaders that the price under the Marketing Agreement, if the new amendments are agreed upon by the Department of Agriculture, may be

(Continued on Page 8)

FOURTEEN MEN sat down to dinner the day we threshed at our place. All of them lived within a mile or so of us. With their help Elmer and I got all of our wheat and oats threshed within the span of a single day, and also managed to reduce to a mere pin point the world's visible supply of pot roast, mashed potato, watermelon pickle and pie.

According to the sensible way we keep farm books, our threshing didn't cost us a cent outside of what we paid the man who owns the machine. It is true that Elmer and the gray team and I owe (and look forward gladly to the paying) a day's work each to Mr. Westervelt, Mr. Ginnever and Mr. Poppino, but we haven't any column in which to put such an item and besides there isn't anything to record because changing work is fun.

We can't make our County Agent see it that way, of course. He says all labor items, whether donated, swapped or paid for should be figured in determining the cost of producing a bushel of wheat. But as I tell the County Agent every time he gets us cornered in an argument, if we plow and plant and lime and cull and spray the way he says to, it's only fair for him to let us keep books the way we want to. And we are convinced that changing work with neighbors on things like threshing and baling hay and pig day is fun and no more an item in cost accounting than a day dedicated to attending the annual M. E. picnic at the lake.

One can recall many amusements that are more pleasurably diverting than threshing at home, for when we thresh at home the rigid code of etiquette which governs changing work demands that Elmer and I take the meanest, dirtiest, hottest and most exhausting tasks in the common enterprise and that for three days beforehand, and as many thereafter, my wife shall suffer from a bad case of the dry tizzies over the matter of the threshers' dinner. Just suppose that the meat wasn't done right, or the pie crust was tough, or the gravy had lumps in it! Nothing like that has ever happened, but it might happen and then where would we be? We'd have to move out West, I suppose, to some place where they hadn't heard of our disgrace and start fresh.

But the days when the threshing takes place on Mr. Poppino's farm—or perhaps Mr. Westervelt's or Mr. Ginnever's—and we have no responsibilities and are assigned pleasant tasks such as getting loads down in the lot, and hauling them up and waiting our turn in line and, finally, stuffing the bundles into the monster's insatiable

mouth (none of this inside stuff at the muzzle end of the blower), then changing work is nothing but fun and has no part in cost accounting.

On such days Elmer and I start off gaily in clean shirts, caps, and overalls faded by much washing to the color of the blue chicory blossoms along the roadside (she sees to it that our garments do her proud when we change work). We must present a pleasing color scheme behind the gray team with our blue chicory pants jiggling frantically against the red of the hay rigging. On such days my wife stays home and plans, I suspect, to stay out of the kitchen, fetch her dinner from the ice box, get caught up around the house and wait for a batch

of fresh news at supper time. The day the threshers come puts, to be sure, a cruel strain on the lady of the house, but it must be partially compensated for by the three scattered days of peace when the cycle of changing work takes the men away from the farm and out from under foot, from the rising of the sun to the going down of the same.

Changing work is about all that's left of the rural cooperation of old days that once included barn raisings and breaking out drifted roads with the combined ox teams of the neighborhood. I'm getting the uncomfortable feeling that if many more folks up our road acquire combines and more machines designed to make each

farm completely self-sustained and independent of the neighbors, changing work will soon become no more than a memory. Even now the talk under the door yard maples after threshers' dinner has to do mostly with the different types of combines and the best ways of fanning mashed grasshoppers out of the combined oats. I prefer the other kind of non-mechanical talk which dealt more with men and wheat and horses and was tactfully directed toward getting the threshing machine man to give the true figures on how much barley Ed Barnes really got this year off his 14-acre piece; it being the universal suspicion up our road that Ed was embellishing the facts by about 10 bushels to the acre when he talked about it down at the store Saturday night.

And if the practice of changing work ever went the way of barn-raisings and breaking out the drifted roads, how we'd miss the threshing talk at supper time! When we get home my wife is terribly anxious for the news, of course, and we know just what it is she just can't wait to hear, but we tease her a little by telling her first of the grain yield and how the gray team behaved in company, saving until the gauge shows her boiler is about to burst, the vital, front-page news of what we had for dinner.

It is an art to say just the right thing at home about another woman's threshers' dinner. Over-statement and under-statement are equally dangerous. The ideal thing—if you can fetch it—is to lavish praise without stint and still leave the impression that however excellent the other dinner was, it fell measurably short of the heights attained by the one at our house. That takes talent, but when you happen to hit the right note the hard work in the kitchen and the days of suffering from the dry tizzies become fully repaid.

Potato Crop 4% Below 1938

THE information that would make potato growers happiest right now would be an answer to the question, "Should I sell my potatoes this fall or hold them for higher prices?"

No one can answer that question with certainty, but we can give you available facts to help reach a decision. It is true that more optimism about prices is being expressed by growers than we have heard in some years.

As was expected by many, the government crop report for August 1 was 9,240,000 bushels below the July 1 estimate. As indicated by August 1 conditions, the crop was estimated at 356,834,000 bushels, which, if verified at digging time, will mean a crop 4 per cent smaller than a year ago and 4 per cent below the average for the years 1928-37.

Maine Crop is Good

Also of interest is the expected yield by areas. Conditions in Maine have been good, and the August 1 estimate is 49,300,000 bushels, as compared with last year's crop of 39,600,000 and the ten-year average of 44,968,000. In fact, yield prospects on August 1 were above a year ago in every New England State except Connecticut, and there the decrease is not large.

Smaller crops than a year ago are expected in five of the eight late surplus states. The five states are New York, Pennsylvania, Michigan, Wisconsin and North Dakota.

In the ten states classed as minor late surplus states, smaller crops than a year ago were expected in Nebraska,

Idaho, Colorado, Utah, Nevada and Oregon.

In twelve other late states, the crop is estimated at 37,907,000 bushels, compared to last year's figure of 38,782,000 and a ten-year average of 39,900,000.

Seven intermediate states, where the harvest is well along and where the estimate therefore will not be affected by weather developments, had a crop of 27,646,000 bushels, as compared to last year's crop of 37,923,000.

New York Crop Down

The following New York figures are of interest:

	1937	1938	1939
Long Island	10,196,000	11,253,000	7,493,000
Muck Land	1,624,000	1,800,000	1,615,000
Other Areas	16,555,000	13,787,000	14,927,000
State total	28,375,000	26,840,000	24,035,000

Present appearances indicate that

"The rates are \$25 a week if you rest and \$40 if you insist on helpin' around."

the Long Island crop will be made up as follows, in bushels, compared to 1938: Cobblers, this year, 3,439,000; last year, 5,312,000; Green Mountains, 3,893,000—5,783,000; other kinds 161,000—158,000.

The Situation By States

The potato situation in important late states is indicated in the following table:

	POTATOES (Thousand bushels)		
	Average 1928-37	1938	Indicated 1939
New York	29,005	26,840	24,035
Maine	44,968	39,600	49,300
New Hampshire	1,445	1,296	1,536
Vermont	2,280	1,884	2,160
Massachusetts	1,975	2,041	2,324
Rhode Island	543	624	740
Connecticut	2,387	2,310	2,295
New Jersey	7,615	10,530	7,000
Pennsylvania	25,584	22,002	21,168
Ohio	12,308	12,626	12,390
Michigan	25,922	30,000	25,175
Wisconsin	23,380	19,080	17,510
Minnesota	25,691	20,700	22,705
North Dakota	9,137	12,070	10,710
Idaho	23,308	28,750	28,290
Indiana	3,257	2,990	2,225
Virginia	12,352	10,349	7,031
Colorado	14,762	11,830	9,570
Missouri	4,411	5,832	4,823
Kansas	3,365	3,219	2,175
Other	98,563	107,044	103,672
United States	372,258	371,617	356,834

It seems certain that there will be fewer potatoes per capita to consume this winter than there were a year ago, and although there are other factors, such as yields of competing crops and business conditions, that affect prices, growers hope for better potato prices than a year ago. Whether or not they will improve enough during the season to warrant storing is anybody's guess. A pretty good rule adopted by many growers is to sell some in the fall and to store some.

By CHARLES M. GARDNER

Editor of the National Grange Monthly and High Priest of Democracy of the National Grange.

THE ENACTMENT during the closing days of Congress of the Hatch Bill, designed to prevent pernicious political activities by those on the public payrolls, owes its success very largely to the influence of the Grange, which for years has worked hard for the adoption of such a measure. Following the signing of the bill by President Roosevelt, Senator Carl A. Hatch of New Mexico, its sponsor, sent a very emphatic letter to Fred Brenckman, Washington representative of the Grange, expressing appreciation of the important part the organization had played in securing the passage of the bill.

* * *

ONE OF THE youngest Grange masters in the United States this year presides over Crystal Valley Grange at Dundee, New York. George E. Ardrey, scarcely past his 19th birthday when he was installed in January, but already demonstrating rare skill as a presiding officer and in guiding the general affairs of that subordinate. He has not missed a single meeting this year, has brought in several new members and keeps every branch of the work going in lively fashion. Crystal Valley Grange has nearly 300 members and is one of the most successful subordinate units in Yates County.

* * *

PENNSYLVANIA PATRONS mourn the sudden death of one of their most conspicuous leaders, Philip H. Dewey of Gaines, who was master of the Pennsylvania State Grange nearly four years, a prominent political figure in the state for a generation and identified with a great number of forward-looking civic, fraternal and religious projects. Even after the close of his work as State Master, Mr. Dewey continued very active in the Grange field, was a frequent speaker at large meetings in the Keystone State and was sought for many occasions over a wide area.

* * *

ON GRANGE DAY at the New York World's Fair, August 12, the largest delegation from any state came from Delaware — upwards of 250 Patrons — headed by State Master and Mrs. Clarence E. Jester. New York, New Jersey, Pennsylvania, Maryland, Massachusetts, Connecticut and New Hampshire were all well represented in the large audience, which listened to the Grange program, over which National Master Louis J. Taber presided.

* * *

THE 67TH ANNUAL SESSION of the New York State Grange will be held at Syracuse and the dates are December 12-15. Day sessions will be in the ballroom of Hotel Syracuse and evening sessions in the Lincoln Auditorium of the Central High School. The sixth degree will be conferred twice, with an expected total of at least 1,000 candidates.

The Struggle to Raise Milk Prices

(Continued from Page 5)

even higher than was obtained from the strike. As a matter of fact, if government officials accept the proposed amendments to the Marketing Agreement, the October price could very possibly be more than \$2.15, especially if there is a shortage of milk in the fall.

It should be said that if the price of \$2.15 can be made retroactive and cover August milk and if the August price and September price can be enforced, the \$2.15 will represent a gain to dairymen because the amendments to the Marketing Agreement, if accepted by the Department of Agriculture, cannot be made effective before October 1. However, there is grave doubt among those familiar with the milk marketing problems whether dealers will pay the August price of \$2.15, and in particular it will be a surprise to many if those dealers who are reported to have helped start this strike ever come through with \$2.15 to producers.

In any case, this whole situation proves the necessity of permanent machinery to collect prices after they are set. Anybody can set a price—the job is to get it. This is why all dairymen and their organizations, no matter what their feelings are at the present time toward one another, should work together and should continue the government Marketing Agreement in order to have enforcement machinery.

Some Conclusions

XIII. In our last issue in an article written before the strike started, we commended the idea of voluntary agreements on milk prices. The more that farmers do this marketing job and the less they call on the government, the better. Government aid should always be supplementary, and, of course, prices in the Marketing Agreement are minimum prices. There is nothing to prevent farmers themselves, through their organizations, calling a strike or by more peaceful means working together to get through voluntary agreement—higher than the minimum prices in the government Marketing Agreement; and when properly done, it is a healthy sign when farmers take the situation into their own hands.

The Farmers' Union

XIV. Whatever those who criticize the Farmers' Union and its leadership and affiliations may say, no one should make the mistake of criticising its farmer members nor say that there were not any good dairymen mixed up in this strike or acting as pickets. On the contrary, there are just as good men in the Farmers' Union and among those who took an active part in this milk strike as there are in any other organization. The writer of this article produced and sold milk for years at starvation prices. He went through two milk strikes, and he well knows how desperate men can become when year upon year they are forced to see their families go without the necessities of life, to say nothing of luxuries.

Some Fundamental Principles

XV. In this time of disturbance, it may be a good time to set down some principles as we see them:

1. Farmers have a right to strike, and there are probably times when they should, but strikes are costly—not only in dollars, but in lifetime friendships and happiness—and judgment always should be used in counting the costs and considering the sincerity and efficiency of the leadership.

2. Farmers have the right, also, to try to convince their neighbors by peaceful and legal means to withhold

their milk, and there are undoubtedly times when it is the moral duty of every dairyman to listen to the pleadings of his neighbor and keep his milk at home.

3. On the other hand, no one, except an officer of the law in executing his duty, under any circumstances has any legal or moral right to destroy property or endanger human lives. ANY VIOLATION OF THIS IS MOB LAW—CONTRARY TO EVERY PRINCIPLE ON WHICH CIVILIZATION AND AMERICA ARE BUILT.

4. Farmers should run their own show. The bringing in of the radical C.I.O. labor organization with its alleged Communistic leanings into our old country communities and into agriculture is a mistake which will soon be regretted, even by those who now favor it. The C.I.O. and the Communist Party have nothing in common with agriculture, and any temporary gain secured with their assistance will be highly costly to agriculture in the long run.

This truth is so well recognized by farmers of California and the Pacific Coast that when the C.I.O. attempted to wedge into the agriculture of that section, over 100,000 farmers got together in a permanent organization known as the Associated Farmers in order to fight the C.I.O. and to maintain the independence of the western coast farmers.

XVI. Farmers of the New York milk shed don't need the C.I.O., nor the help of any other group if they will only work together. There has been some progress in individual farmers cooperating in their own organizations, but why, oh why, do the organizations themselves continue to fight like cats and dogs while dealers and outsiders laugh and make the most of it?

We have come through a fight that has arrayed neighbor against neighbor. What nonsense, when every dairyman wants the same thing—a living price for milk. It is a safe prediction that you never, never will get it on any permanent basis unless you take the opportunity to consolidate aims to go forward.

Our plea is: let's let bygones be bygones; let's forget the late unpleasantness; if there were gains in it, let's rejoice in them; let's put them on a permanent basis through cooperation, one group with another, minimizing the other fellow's faults and magnifying his virtues. Then, and not until then, dairymen will go some place.

Sheep on Hill Farms

An interesting experiment has been started to determine whether or not the typical hill lands of New York State can be used with profit for large scale production of lambs and wool. The experimental farm is known as the Kenwood Sheep Farm and is located a few miles from Springwater in Livingston County. The farm is financed by F. C. Huyck and Sons of Albany and the experiment is being supervised by a committee made up of Professor F. B. Morrison, Professor John P. Willman and E. L. Worthen, all of Cornell University; R. W. Pease, County Agricultural Agent, Canandaigua; N. F. Smith, County Agricultural Agent, Mt. Morris; Otto K. Landon, the farmer in charge at the experimental sheep farm; and George L. Brown, purchasing agent of the Albany firm.

A flock of 300 ewes was purchased in the spring of 1938 and in addition Western ewes will be bought this fall to bring the number up to 500.

WESTERNERS are Artists in MANAGING WATER

By PAUL WORK

THERE'S nothing like travel to pull a fellow's interest out of the rut of a narrow locality or a narrow specialty. Climates and soils, mountains and plains, haying and harvesting, cattle and sheep, wild flowers and trees, all take on new attraction. Riding a combine with a western Kansas dryland farmer, kodaking a bull-rake haying operation in an Idaho Valley, watching a Colorado gardener "set the water" to flow down the rows of onions, all of these and countless other experiences jack a person out of the commonplace, pop his eyes wide open and set the dome-wheels a-turning to wonder why most of us do things the way grand-father did. Nine chances out of ten the custom of a neighborhood is best but all too often we miss that one time in ten when change would pay.

Paul Work

These Westerners are artists in managing water. It takes skill and patience to arrange ten or twenty or thirty furrows between rows so that each will get its proper share of water, without waste and with a minimum of attention throughout the day. I have long suspected that many an Eastern situation would lend itself to leading a little stream around the base of a hill, letting the water run down the rows in typical Western fashion. What I have seen has strengthened this suspicion, especially when one notes that irrigated soil out here is not always uniform and that the terrain is not always level. It would take some patience to learn the management of water but equipment costs are low. Even if pumping is required, as often happens out here, no pressure is required. I'm not against sprinkler and Skinner systems—I'm for them, but I think considerable care is needed in choosing among these three ways of watering.

One has to see Western irrigation to appreciate it. As one travels, the parched and thirsty desert suddenly changes to the garden green of alfalfa, sage brush and tumble weed give way to golden wheat, treeless plains and dreary little farmsteads are left behind as homey, shaded houses and blue grass lawns appear—these shifting scenes

with the occasional crossing of a full-flowing canal serve to stamp indelibly the impression of what irrigation water does for land that gets six to fifteen inches of rain a year.

The vesting of water rights, the maintenance of ditches, the weekly or daily allotment of water, these give rise to practices and customs, laws and decisions that are strange to Eastern farmers. At Rocky Ford, Colorado, farmers hold stock in the irrigation enterprise, about a share for each ten acres. Then an annual assessment, of about eight dollars, against the stock pays for private maintenance. When new or special work is necessary, the assessment increases. Even so, that seems pretty cheap water. If rivers get unduly low, water must be prorated and flow must be curtailed. Priorities of longer or shorter standing must be observed and altogether it is a complicated as well as a vital business. A Pueblo newspaper carries in the upper corner of the first page weather forecast on one side and second-feet of water coming through the Arkansas River on the other. A second-foot is the quantity of water that flows in a second through an opening a foot square, without head or pressure. It amounts to an acre-inch an hour.

Where water leaves the main ditch to bless a given farm, gates of concrete and wood or iron are built to regulate the flow. Lock and key prevent opening the gate further than is allowed.

The picture shows how the water is distributed. A movable canvas dam keeps the water level high enough in the field ditch to lead the water out. One opening lets out a stream that divides into three and each of these in turn serves two furrows between rows of onions. Silt from the ditch accumulates at the near end and every few years it must be scraped out and spread on the field. Water is set to flow fairly rapidly to the far end of the furrow so that it is absorbed evenly throughout its length. The sidewise spread of water is called "subbing" and follows a fairly definite pattern. If furrows are too far apart, leaking downward increases the waste, and slowness of sidewise movement means inadequate wetting. Overflow gathers in a waste ditch and runs off to water another field, or to find its way back to a stream.

Details of practice vary widely with soil character, lay of the land and crops. Hay and grain may be watered by either furrow or flooding systems.

Irrigating onions in Rocky Ford, Colorado. A canvas dam in the ditch to the left helps to control the flow through the outlets. Each outlet feeds three furrows, each of which divides into two near where the owner stands to carry water down every other onion row.

WHEN HARVEST TIME COMES...

YOU'LL BE GLAD YOU BOUGHT
AT THE ESSO SIGN!

WHEN the market's waiting—will *your* crops get there early enough to catch prices at their peak? Or will breakdowns due to lubrication failure cause you to lose out? Play safe! Get your motor fuel and oil at the Esso Sign and protect your harvest profits!

Farmers learned long ago that spoilage, delayed shipments and repair bills eat up profits. So they came to depend on the uniform high quality of the fuels and lubricants made and backed by the world's leading petroleum organization.

You, too, can rely on your nearby Esso Dealer to supply you with power-plus and *sure* lubrication for every motorized job on your farm. The petroleum products he sells are *always* dependable.

You'll need extra power and protection to see you through when the going is tough and the weather is bad. So the next time you stock up with fuels and lubricants, drive in at the Esso Sign. The fuels, oils, batteries and tires you buy there have a *lasting* reputation!

Dry Weather and the Milk Situation

By LELAND SPENCER.

THIS is the fourth summer in the past seven years that we have had a serious drought in the New York milk shed. Judging by the condition of pastures on August first, as reported

Leland Spencer

by the Agricultural Statistician for New York State, Dr. Gillett, the recent drought has been about as bad as any we have ever had. This pasture report is based on information supplied by a large number of farmers in all parts of the state, who are known as "crop correspondents." They report the condition of pastures and other crops in their own

localities as a percentage of what they consider normal.

The average of the pasture reports for New York State as of August first for the six non-drought years since 1930 was 82. In the four dry seasons the conditions reported for August first have been as follows:

1933 — 44	per cent of normal
1934 — 48	" " " "
1936 — 44	" " " "
1939 — 45	" " " "

The situation this year has varied considerably by localities. In several southern and southeastern counties, pasture conditions have been reported below 30 per cent. In those areas the cows could get practically no feed at all in the pasture lots during the latter part of July and the first half of August.

In one respect this year's drought has been worse for New York dairymen than those of 1934 or 1936. This year the other dairy regions of the country have had a fair to liberal supply of moisture, with the result that the output of butter, cheese, evaporated milk, and milk powder has been ample and the prices of all manufactured dairy products have remained low. Consequently the returns for surplus milk in New York have not gone up, nor have the prices of fluid milk and cream been raised as much as might be justified by the local situation. Under the Federal and State orders for the New York market the prices for Class 1 and Class 2A milk are hitched to the market price of butter. On the other hand, the returns for July and August milk are on a much higher level than those received during the spring months, due to reinstatement of the marketing orders.

Dairymen are well aware that summer dry spells such as we have just been passing through mean a big increase in costs of producing milk, because it is necessary to switch from cheap pasture to more costly feeds such as corn silage, green corn, hay, and grain. Considering the drastic changes in feeding practice that are required,

Eastern Onion Crop Normal

New York State's onion crop is estimated at 3,348,000 hundred pound sacks compared to last year's crop of 2,961,000. In general the onion crop in eastern states is about the same as last year but there are significant increases in yield in western states. The local production in late onion states is expected to be 8% higher than the 1938 crop and 22% greater than the 1928-37 average. The Massachusetts crop is a little over half the size of last year's.

it is truly remarkable that the milk flow is maintained with so little shrinkage during periods of drought. The effect of this year's drought on the quantities of milk delivered to plants in the New York milk shed is shown in the accompanying table:

POUNDS OF MILK DELIVERED PER FARM DAILY —1939 COMPARED WITH 1937-38 AVERAGE*				
Month or week	Pounds per farm, daily		Increase or decrease	
	1937-38	1939		
January	187	201	÷ 8%	
February	193	210	÷ 9%	
March	214	232	÷ 8%	
April	243	251	÷ 3%	
May	291	289	— 1%	
June	313	314	No change	
July	253	246	— 3%	
Last week of July	229	213	— 7%	
First week of August	221	201	— 9%	
Second week of August	212	199	— 6%	

*Based on reports of the Dairymen's League Cooperative Association.

Of course, not all the changes can be ascribed to the drought, but apparently the dry weather did not pull down the milk flow more than about 10 per cent at any time. (Editor's Note: That figure of course is for the entire state. In certain counties, production dropped much more). The amount of effort that farmers make to keep up their output of milk at such times is indicated by the change in proportion of feed the cows are estimated to get from pastures. Ordinarily in New York State the cows get 90 per cent of their total feed from pasture during June, and 80 to 85 per cent during July and August. This year, the crop correspondents estimated that on August first only 60 per cent of the feed was furnished by pastures. Forty per cent has to be supplied in other ways. (Editor's Note: A few dairymen have already fed practically their entire supply of hay.)

At the time this is written there has been enough rain to break the drought in most sections, but the final effects will not be seen for a long time. Whenever the costs of producing milk are raised without a corresponding increase in returns, farmers begin to make changes that affect the supply of milk not only for the immediate future, but for several years ahead. It's a safe bet that fewer heifer calves will be saved this fall. That will have some effect on the milk supply two or three years from now.

Unfortunately summer droughts affect not only the feeding and production of the cows, but also the attitude of dairymen toward the milk problem. Except for the distress caused by the recent drought, it is unlikely that there would have been so much support for a milk strike at this time.

Small Cabbage Crop

The late domestic cabbage crop in New York is estimated at 65,200 tons as compared to last year's crop of 147,300 and the ten year average of 87,900. Over the entire country the production of this crop both for marketing fresh and manufacturing kraut is set at 300,400 tons which is 41% below the record crop of 1938 and 1% below the ten year average.

A decrease of 12% in acreage of Danish cabbage is indicated in the late states of Colorado, Indiana, Michigan, Minnesota, New York, Ohio, Pennsylvania and Wisconsin. In general, Danish cabbage has gotten off to an unfavorable start because of hot dry weather.

Bean Crop About Average

The crop of dry edible beans, which to some extent competes with potatoes, is expected to be about 20 per cent below last year's bumper crop, but only

3 per cent below the ten-year average. The indicated crop on August 1 is 12,252,000 100-lb. bags, compared to last year's figure of 15,268,000.

The following table shows previous yields and expected 1939 yields for important bean growing states:

DRY EDIBLE BEANS—100-lb. Bags (Thousands)		Average	Indicated	
		1928-37	1938	1939
New York	-----	979	1,449	1,088
Michigan	-----	3,861	4,567	3,504
Montana	-----	290	216	184
Idaho	-----	1,482	1,566	1,387
Wyoming	-----	374	470	448
Colorado	-----	1,079	1,498	797
New Mexico	-----	545	531	539
California	-----	3,736	4,563	4,000
Other	-----	292	408	305
United States	-----	12,638	15,268	12,252

Egg Markets

August 1st usually marks the peak of eggs in storage. Reduced to shell basis, eggs in storage including frozen eggs on August 1st was 11,103,000 cases as compared to 10,278,000 a year ago and the five year average of 5,620,000. On August 1 shell eggs in

storage were 7,017,000 cases and last year 6,411,000.

Due to hot weather which has resulted in some scarcity of nearby top quality eggs, some of the better eggs in storage have been taken out.

The United States Department of Agriculture points to an interesting development. In 1938 dried egg products in the United States amounted to over 6,000,000 lbs., the largest amount ever produced in this country since the egg drying industry began production on a commercial scale in 1927. 1937 dried egg production totalled 2,391,382 lbs.

The big reason for the increase is the unsettled situation in China. In 1927 we imported nearly 9,000,000 lbs. of dried egg products in China while in 1938 the amount dropped to about a million and a quarter pounds.

On July 1st the number of young chickens on farms was estimated as 2.6% larger than a year ago. The indications are that turkey production is about 30% higher than 1938.

Northeast Has Good Apple Crop

THE PRODUCE NEWS estimates a total U. S. apple crop of between 150,000,000 and 160,000,000 bushels. There is a bit more uncertainty than in past years about the condition of the crop because the Department of Agriculture has discontinued estimating the total apple crop and has confined its estimate to what has commonly been called the commercial crop, which on August 1 was put at 102,630,000 bushels.

The other day Professor Harper of the Department of Agricultural Economics and Farm Management at Cornell pointed out that the term "commercial production" has in the past been influenced by consumer demand. In other words, it is not a measure of the apples satisfactory to be sold, but it is to some extent an estimate of what the public is willing to consume.

At any rate, there is no doubt that a larger than normal proportion of the commercial apple crop this year is located in the Northeast, while the proportion in the Northwest is the smallest, except for 1937, since 1920. To emphasize this, four important northeastern apple producing states—New York, Maine, New Hampshire and Massachusetts—expect an apple crop 42 per cent above last year and 17 per cent above the five-year average. Four states—Pennsylvania, Maryland, Virginia and West Virginia—expect a crop 22 per cent above last year and 11 per cent above the five-year average. The Ohio-Michigan crop is expected to be 103 per cent higher than last year and 56 per cent of the five-year average. Four western states—Arkansas, Missouri, Kansas and Illinois—are looking for a crop 168 per cent higher than last year and 25 per cent above the five-year average; while five far-west states—Washington, Oregon, California, Idaho and Colorado—are looking for a crop 6 per cent below last year and 15 per cent below the five-year average.

More Apples Early

In studying the marketing of apples, remember that a large orange crop is expected to be on the market about the first of the year. It is, therefore, considered essential that a good proportion of this year's apple crop be moved before that date. One man who is in close touch with the situation says that there should not be over 32,000,000 bushels of apples stored on December 1.

Another point to consider is that the prospects for export of apples of this year's crop are by no means rosy.

Business activity is a big factor in the price of any farm product. Consumer demand for all products is now considerably below the average of

1936-37, and somewhat below the marketing season for the 1937 fruit crop. Compared with a year ago, incomes of industrial workers and business activities are higher, but prices of all raw materials are lower. In fact, there have been few times since records have been available when there was so great a spread between the incomes of factory workers and the prices of all basic commodities.

Growers Help Themselves

Recently there was a meeting in Rochester attended by fruit growers and representatives of retail stores. It was agreed there that Western New York stores would feature apples and peaches. At the same time, there will be committees in fruit growing communities who will make regular reports on the condition and size of the crop. These reports will all clear through one man, and this information will be available to stores so they will know about what supplies are to be moved each week.

At that meeting it was pointed out that fruit growers have not used all available means of keeping the public informed, and plans were made to use the facilities of the Farm Bureau, the State Department of Agriculture, the College of Agriculture, newspapers, *American Agriculturist* and radio.

F. A. Harper of Cornell has been studying figures on past crops. He states that the size of the U. S. apple crop has not been a reliable basis for forecasting seasonal changes in apple prices. He has divided figures for the past 21 years into three groups—7 years of small crops, 7 years of large crops and 7 years of medium crops. The 7 years when crops were large showed less rise in price from December to May than either of the small or medium crop years. He found that in 2 of the 7 years when the crops were big the advance in price in that period was among the largest on record. At the same time Professor Harper points out that the size of the crop is a fairly reliable guide in judging what type of fruit will justify an investment in marketing costs.

In Ulster County figures for 1937 show, for example, that McIntosh, Red Delicious and Northern Spy returned a bigger net to growers than other varieties; that Fancy and "Tree Run" returned the biggest net of any grade of McIntosh; and that 2 3/4" up made the best net returns of any size of McIntosh.

Professor Harper points out that in any year when the prospect is for low prices, very little marketing expense is justified for poor grades and sizes of all varieties, or for all grades and sizes of low priced varieties.

FRUIT GROWERS

Visit STATE COLLEGE

FRUIT growers who attended the summer tour of the New York State Horticultural Society at the College of Agriculture on August 18 spent the afternoon looking over the experiments being conducted in the University orchard.

One of the exhibits which attracted much attention was made up of several samples of McIntosh apples which had been stored under different conditions. Some had been in cold storage at various temperatures, and even those that had been taken out of storage the day of the tour looked far from marketable as might be expected at this late date. Among the exhibits, however, were two lots of McIntosh apples—one lot taken out of storage that day and one that had been out of storage 12 days. These Macs had been in storage in a modified atmosphere containing less than the normal amount of oxygen and more than the normal amount of carbon dioxide. They looked and tasted good.

It has been found that care and management allows a natural building up of the carbon dioxide in the air in storage as carbon dioxide is given off by the fruit itself. Those who saw the exhibit agreed that storing apples in a "modified atmosphere" offers distinct possibilities of lengthening the season for Macs and perhaps for other varieties as well.

Another point in the orchard which proved unusually interesting was an

experiment in the use of quack grass for orchard sod. It has been found that a rather heavy application of nitrogen is essential to get the quack started, but after it is started, moderate applications of nitrogen will keep it growing. Quack grass has several advantages for orchards. It makes a very heavy growth, it mats down easily, and during periods of heavy rainfall in the fall will make use of the available nitrogen in the soil so that the trees do not continue growth late enough to cause trouble.

For the past few years some exhaustive tests have been made on soil atmosphere. While we may not think in those terms, it is true that any soil not completely water-logged contains air. It has been found that where apple trees do not make thrifty growth, the soil air usually lacks oxygen. Earth has been built up to form a circle around one tree in the orchard, and the soil has been kept completely water-logged all summer. As you might expect, the leaves are a sickly green and the tree looks decidedly unthrifty. That situation doesn't occur in many orchards, but the fruit men at Cornell are convinced that many orchard soils do contain too little oxygen. Thorough drainage helps, but with a rather heavy soil, it has been found that a line of tile between each row of trees is not adequate. Part at least, of the answer is to set trees only on soil that is favorable for apples.

Mrs. John Wooden first prize winner of bread contest held by Hopewell Grange, Ontario County.

AA-Grange Bread Baking Contest News

Pomona chairmen of Service and Hospitality committees have received the prizes for distribution to winners in the coming Pomona bread contests. These prizes are well worth winning and are being donated by the following companies: Cooperative G.L.F. Products, Inc., Ithaca, N. Y.; International Salt Co., Scranton, Pa.; Perfection Stove Co., Cleveland, O.; Pillsbury Flour Mills Co., Minneapolis, Minn.; Russell-Miller Milling Co., Minneapolis, Minn.

Pomona contests have just begun and we will probably have some Pomona winners to report next issue. Meantime, Subordinate Granges are winding up their contests. Pike Grange, Wyoming County, has a special note of interest this time. Chairman Mrs. Clifford Cronk reports that their winner, Mrs. G. N. Arnold of Bliss, N. Y., also won the first A A-Grange baking contest in 1933. That was a bread contest too! Evidently Mrs. Arnold has lost none of her skill as a bread baker in the past six years.

Chairman Mrs. Howard DeMun of Troupsburg Grange, Steuben Co., writes that their contest was won by one of their youngest members, a High School student, Miss Vivian Minard. Academy Grange, Ontario Co., had a very enjoyable contest. Chairman Mrs. Edson Ward reports that it was held in connection with their Grange picnic at the home of Mr. and Mrs. Howard Mansfield and that about 65 members attended.

Mrs. Louis Kufin, Jr., chairman of East Pembroke Grange, Genesee County, writes that their members had a lot of fun auctioning off the bread after the judging, and one loaf sold for as high as 40 cents. McGrawville Grange, Cortland County, had their bread judged by a man, Floyd Hollister, who conducts a large baking concern in Cortland. Chairman Mrs. Lizzie McGinnis writes

that Mr. Hollister considered all of the entries excellent but gave a few suggestions for improvement of each loaf. And now here are the Subordinate Grange winners since last time:

Subordinate Grange Winners

COUNTY	GRANGE	WINNER
Allegany	Little Genesee	Mrs. H. R. Burdick
Broome	Bartonville	Mrs. Ward Barton
Cayuga	Cato	Edith L. Mott
	Weedsport	Mrs. William Ott
Chautauqua	Busti	Mrs. H. W. Ayers

	Wyoming	Harriet Jeffes

Onions in Limelight

The Orange County, N. Y., first Onion Harvest Festival was an unqualified success. Weather was favorable, and it is estimated that 20,000 visitors were there. There was a motorcade which traveled through the muck area and then to a farm between Goshen and Florida, where a pageant was presented.

Orange County has 9,000 acres of muck, $\frac{2}{3}$ of which are planted to onions. This year the crop is expected to top 2,000,000 bushels, with a value of more than \$1,000,000.

The Central New York Forestry Field Day held recently at Arnot Forest, Schuyler County, was a big success. The picture above shows Edwin and Charles Wright of Reynoldsville, Schuyler County, New York. They are 7 and 8 years old and put on a sawing demonstration indicating that they will furnish stiff competition in sawing contests in coming years.

Below are the winners for sawing contests for juniors and seniors. At the left is Grover Barr and Harold Heeman of Chemung County who won the junior event by sawing through a 12½ inch green beech log in 26.8 seconds. At the right are Arthur Bombay of Cayuta and Ellsworth Earl of Odessa. They represented Schuyler County and won the senior contest by tearing through a 16 inch beech log in 32.5 seconds. The juniors were each presented with a saw given as a prize by Henry Diston and Sons and the two seniors each received saws given by the Simonds Saw and Steel Company.

If you are entered in the

AMERICAN AGRICULTURIST

BAKING CONTEST

Increase your chances of winning by using Occident Flour . . because Occident gives you:

13 to 28 ozs. MORE BREAD
(PER 49 LB. SACK)

14½% MORE PROTEIN

100% MORE FRESHNESS

These facts proved by comparative tests with two other widely sold flours. Tests made by W. E. Lang Laboratories, Chicago . . . nationally-famous cereal testing organization.

OCCIDENT FLOUR Better Baking Guaranteed

Occident Flour as awards for all County and State winners.

COOPERATION . . .

NOT COERCION!

Dairymen's League Farmers Also Wanted Higher Milk Prices, **BUT—**

1. We do not believe in strike methods of getting higher prices when a better and more permanent method is at hand.
2. We will not sell our birthright of a sound, long-time, fair-price program of orderly procedure, for a mess of Farmers' Union-C. I. O. pottage in the form of a temporary higher price with no way of maintaining it.
3. We do not believe in the disorderly, unlawful, coercive method when there is a lawful, orderly, and permanent way of raising prices which we have helped to establish.
4. We do not believe in using the crude tools of 25 years ago when through cooperation, at great cost and with great sacrifices, we have forged better tools for this very purpose.

THESE are some of the reasons why Dairymen's League farmers who supply milk to the New York City market did not support the strike. We tried the strike method more than 20 years ago because we were sick and tired of being shoved around by dealers. THERE WERE NO SUCH THINGS AS MARKETING ORDERS AT THAT TIME. There was no other way of getting our demands. EVEN COOPERATION WAS UNLAWFUL.

Last spring when the State-Federal order was temporarily invalidated, we joined with other dairy farmers in a peaceful withholding of our milk in an effort to stabilize prices and markets. The same group who opposed our program and refused to withhold their milk at that time, now that we have a lawful method established, is again opposed to us.

The one and only purpose of the Dairymen's League Cooperative Association has always been to find an orderly, lawful, permanent way of getting a living price for milk. We worked for the Rogers-Allen Law, for the Bargaining Agency, for the State-Federal orders, because we believed this program would give farmers of this milk shed stabilized markets and higher prices.

We were the first to ask the Bargaining Agency to petition for a higher price for milk

because of drought conditions, and the machinery to accomplish this was already in motion before the strike started.

The State-Federal marketing program has now been tested. It works. It has the support of the great majority of dairy farmers of this milk shed. The Supreme Court says it is constitutional. AND IT IS COOPERATIVE—NOT COERCIVE.

The Farmers' Union-C. I. O. strike was a direct challenge to this whole program—backed by the same interests that opposed the plan in the beginning and that have attacked it at every opportunity.

In this last attack the C. I. O. furnished money and men. Neither C. I. O. nor Communist methods are needed in farmers' affairs.

• • •
League farmers need higher prices just as badly as anyone else. We fight just as hard as anyone else for higher prices. We propose however to make that fight for an orderly, lawful, fair program that will protect markets and preserve higher prices after we get them.

We prefer COOPERATION with our fellow farmers to coercion by Farmers' Union-C. I. O.-Communist methods.

THE DAIRYMEN'S LEAGUE

BY GORRY, We've Got 'Em

(Continued from Page 1)

disputed territory from Canada. That's the reason why Maine is so much farther North than the rest of the United States, and that is the reason why it gets so cold up there in the long winters that they can't keep cast iron bulldogs because it freezes their whiskers off.

Barns Hitched to Houses

THE long, cold winters, are probably the chief reason also why most of the farm houses of Maine and other northern parts of New England are joined to the barn. When it is 40 degrees below zero, and you have just got out of bed at 5 o'clock on a cold winter morning to do the chores, it's nice to walk right into the barn without having to go outdoors, but it seems to me that the barn might be too close in fly time or in case of fire.

The Maine growing season is a short one, but some crops like it that way. Take oats, for example. Maine farmers think nothing of 50 and 60 bushels per acre. And, believe me, those oat fields, just turning golden when I was there, were something to marvel at.

Potatoes, also, like the Maine climate and soil. I have seen potato fields in most of the potato growing sections of the United States, but I have never seen anything equal to the potatoes of Aroostook County. In fact, they can grow them like nobody's business in almost any part of Maine. When I was a youngster we used to grow four or five acres of potatoes. So did the neighbors, and I spent many a weary hour hoeing and digging potatoes for 50c and 75c a day. But as my Maine friends would say: "By Gorry, it would be some job to hoe by hand some of those hundred acre fields in Aroostook County, to say nothing of digging them by hand and picking them up!"

UP there they live and die by potatoes, and to one who loves to see anything growing, they are a grand sight, especially this year when they give every promise of a big crop with a very fair outlook for a good price. Potato growers of Maine have had hard going for several years, but the situation certainly looks better this year. One of my friends who goes to Maine to hunt, says he can tell whether they had a good or bad year without talking to them. If potatoes are good and prices high they smoke cigars and the corners of their mouths turn upward. But if it is a bad year, there are no cigars and their mouth corners turn downward. I'm hoping this is a cigar year!

In raising the crop, of course, practically all the work is done by machinery. Many Maine growers practice a three-year rotation: potatoes, followed by oats, and then by clover. Clover is plowed under for green manure, and the cycle starts over again. Some shorten the rotation to two years by sowing crimson clover and plowing it under the second year. There is nothing that grows that is more beautiful than one of those great fields covered with crimson clover in bloom.

500 Bushels to the Acre

POTATO yields in Maine are astonishingly large. Everything is handled in and measured by barrels holding 2 3/4 bushels. One authority told me that the average yield of potatoes for Maine is 275 bushels, and that there is at least one record of 550 bushels per acre on a thirty-acre piece. The average number of acres of potatoes to a farm in Aroostook County is fifteen. That seems low to me, for I have personally seen many fields running from 50 to 100 acres. Heavy applications of a complete fertilizer are used.

All potato acreage in Maine is under the control of the AAA. Every farmer has his "goal", or limit to the number of acres which he can plant. Any

farmer who does not conform and get in step with the rest of the army is just out of luck. His neighbors will loan him no tools, cooperate with him in no way, and hardly speak to him. I am told that Maine growers are supporting this crop control plan, which seems to me to be the tightest kind of regimentation. I hope I am wrong, but I cannot help feeling that some day they will be sorry.

The potato varieties chiefly grown are Cobblers, Green Mountains, Katahdins (named after Maine's highest mountain, of which everyone in the state is justly proud), and Chippewas. Much credit is due to the Maine State College of Agriculture, under the leadership of Dean Arthur L. Deering and his associated scientists who have worked with farmers to obtain the varieties best suited to Maine.

What is a "Tie-Up"?

WHILE Maine potato growers are among the best in the world, I cannot work up much enthusiasm for Maine dairying. With exceptions, of course, Maine dairy cows do not average up with the dairy sections of the Northeast, and I did not see but one or two really good dairy barns on the whole trip. Maine novelists and other writers who know their Maine always speak of the cattle stalls as "tie-ups". That is an accurate term, for instead of fastening the cows in a stanchion, they are tied in their stalls with various chain and rope devices.

The cold weather and deep snow make it difficult to draw out the manure in the wintertime from the barns. Then the spring work comes with a rush, with the result that the manure is not drawn out usually until after haying. Most of the barns are not inspected for the fluid markets, not at least in the way they are inspected in the Boston and New York milk sheds, and those Maine farmers who are in the dairy business are not well paid for their product. Milk producers in other parts of the Northeast complain about low market prices. But I met one group of dairymen who thought they were being well paid when their local cooperative creamery paid them 28 to 30 cents per pound for butterfat, or at the rate of a little over \$1 a hundred for milk.

Remedies for Maine Farm Troubles

AS one travels across this grand old State and visits its people, of whom there are none better, he wonders why the farmers of Maine have been having so much financial difficulty for years, particularly those farmers who live in the good river valleys or on the splendid lands of Aroostook County. I don't want to be too positive, but with the kindest of intentions I am going to suggest some reasons for the troubles of Maine farmers, with the hope that Maine readers will come back at me hard if I am wrong.

First, the one-crop farmers of America are those who have been hardest

hit in the last ten years, and Aroostook County farmers carry most of their eggs—or rather their potatoes—in one basket. That is fine when yields are good and prices high; it is ruinous when the market for potatoes continues the way it has been during the past five years.

NOW, potatoes should always be the chief crop in Aroostook. But it needs to be supplemented by something else, and I am glad to see that Aroostook farmers are coming to this conclusion. There is a tendency toward more dairying in Maine, toward experimenting at least with the growing of beef cattle as a sideline, and especially in growing canning crops like peas. I saw hundreds of acres of clover and alsike that would make a New York dairyman green with envy. To be sure, Maine is a long way from fluid markets, but there is increasing interest in cooperative creameries, and I don't see why some cheese factories wouldn't succeed.

There is even a better chance to run a small herd of beef cattle as a sideline supplement to potato growing. On the farms of J. S. Doyle and George Stone & Son in Aroostook County, large and successful potato growers, I saw moderate sized herds of beef cattle, as fine looking stock as one could see anywhere, and their owners were very well satisfied that these herds made successful supplement or diversification from potato growing.

THERE is nothing new or wild about the idea of growing beef cattle in the State of Maine. At Vassalboro, Paul Burleigh formed a partnership with Governor Bodwell in 1879 for the importation and breeding of Herefords. He visited all the principal herds in the United States and Canada, and then visited England to buy from leading breeders there. His first importation consisted of 67 breeding animals, and was soon sold to rapidly increasing western trade. In the five importations he made, he brought over between 800 and 900 head of stock, and his sales between 1880 and 1890 amounted to a total of more than a million dollars. I was very interested to learn what Burleigh did with those dollars. He had eleven children, ten of whom lived to maturity. He gave every one of the ten a liberal education, and he always stood squarely behind every movement for the advancement and extension of Maine schools.

More Sheep?

MAINE, like the rest of the Northeast, was once a big sheep and wool state. What is there impractical about bringing some sheep back to Maine? To be sure, neither dairy, beef cattle or sheep will bring in money like potatoes do in a good year, but a few dollars of steady income with these livestock enterprises will come in mighty handy during those skinny years when potatoes are a drug on the market.

I saw one large field of alsike clover which was being cut and threshed by a combine. The clover straw went back on the soil and the seed saved from it was worth at least \$20 an acre. With the production of clover and of grass seed, it seems to me Maine potato growers have another possibility for diversification without interfering much, if any, with the regular job of growing potatoes.

While I am interested, of course, in the agriculture of these northeastern states, I am always more interested in the farm folks themselves, and in the next issue I hope to tell you some stories about Maine folks, their history and environment which have made them the great people they have been and are.

"You mean I spent a whole week of day-in and day-out rootin' only to end up in just another pig yard?"

By J. F. (DOC) ROBERTS

THE MOST encouraging situation from an agricultural standpoint that I have seen in a long time is in New England. While the people do not seem to have any more money than they do in any other agricultural section, they are not so discouraged as they were a few years ago, and their farm buildings, fields and roads show it. Everyone seems to be working; in fact, there is a scarcity of labor, particularly in the "hurricane zones" where lumbering, of course, is taking a good many men.

Some of the pasture improvement work that they are doing on old brush, moss and rock pastures is almost startling. Three years ago, Ralph Chaffee of East Andover, N. H., showed me a pasture which was absolutely worthless, and by just ordinary, good pasture methods, lime and super-phosphate, he has converted this into almost a clover bed. The rocks on this mountain pasture are still there, but eight acres are supporting eleven head of cattle, and he is going to have to put on more cattle to keep it down.

After-feed is going to be comparatively short in this country, the same as it is all over the Northeast, but he and a good many other men by the increased use of electric fencing are going to be able, particularly with the recent rains, to handle their fall feeding situation almost as well as a year ago, and this is really going to be one fall where the electric fence will again prove its worth.

I attended the Vermont Horse Show at Windsor, where they show the Morgan horses, and again I am convinced that in spite of tractor uses and the place for tractors of all types and kinds, there is still and probably will always be a very definite economic place for the horse. This is particularly brought out on these smaller New England farms. At this Horse Show, Mr.

Moon from Woodstock, Vt., showed a six-horse-hitch of Suffolk-Punch horses which were a real treat and a real sight. They are a big, sturdy, compact, short-legged breed, which are very rapidly meeting favor in that country, and from an economic standpoint will continue to be very popular. It was also surprising to me to find the number of horses and oxen, which of necessity are being used in lumbering operations.

Artificial insemination is receiving a great deal of attention and enthusiasm throughout that entire section. In fact at Claremont, New Hampshire, the dairymen have been working together, have built a bull barn, where they have some of the finest bulls I have seen in a long time, and it is built most ingeniously. At no time is any attendant in the same alley or the same pen with the bull, and he can be handled with absolute safety to everyone. Another very important feature in connection with their artificial insemination work is that they are doing it all through reliable veterinarians. In fact, Dr. L. R. Haubrich was instrumental in getting this bull barn. It was built on his land, and under his guidance; the bulls and the cows are always under his supervision, and there is no chance of disease or fraud. Everything is handled expertly, which I believe is going to spell success or failure in all artificial insemination work.

After all these trips of the past month, I am convinced that there is not going to be a shortage of feed this winter, except in isolated localities like some of our Southern Tier counties in New York State, sections of New Jersey and Pennsylvania. I am also convinced that grain is going to be very cheap, which will tend to offset costs on carrying livestock due to any increase in the price of hay. There is going to be a lot of livestock fed all over the Northeast this coming winter, in fact all over this country; but with New England woolen mills running night and day, with improved building in the larger cities, I am convinced that livestock is not going to sell appreciably lower than it is at the present time, but also I cannot see where it is going to sell much higher, and I believe any and all feeding operations should be based on present prices or possibly a little lower.

FOR SALE: VERY CHOICE GROUP OF

50 JERSEY First Calf Heifers

T.B. and Blood Tested. Due to freshen from October to December first. Good size and color.

The National Bank of Andes

Firestone Host to Farmers at World's Fair

In a New York sight-seeing bus, a reporter is interviewing "Uncle" George McKerrrow, 87-year-old sheep breeder from Pewaukee, Wisconsin, one of the men who appeared on a Firestone radio program. Sitting just back of Mr. McKerrrow is Jay Gelder of Chazy, N. Y.

DURING National Farm Week at the New York World's Fair, the **FIRESTONE TIRE AND RUBBER COMPANY** of Akron, Ohio, was host to 100 farmers representing many states and many types of agriculture. These were the men—in some cases boys and girls—who during the year had appeared on Firestone radio programs, telling in interviews what had been done on their farms.

Among the younger guests present were Paul Stiefbold of Illinois, last fall's winner of the Wheatland Plowing Match (see page 16 of March 18 issue of *American Agriculturist*); and Irene Brown, also of Illinois, who fed Mercer, the champion Aberdeen Angus steer that was purchased by Firestone and is being exhibited at the Fair (see page 18, January 21 issue).

The group spent a day seeing the sights of New York and a day at the Fair, where they visited the Firestone exhibit, General Motors, Ford and the Electrified Farm. The group enjoyed lunch at the Ford exhibit and afterwards saw a demonstration of the new Ford tractor.

In the evening a banquet was served in the garden of the Firestone exhibit. Leonard K. Firestone was host, Samuel R. Guard toastmaster, and talks were given by Wheeler McMillan, Dean Carl E. Ladd, and Grover Whalen, President of the Fair.

Weyerhaeuser July Contest Winners— Still Time for September Contest

COMMENTS from the seven prize winners in the monthly Weyerhaeuser 4-SQUARE Genuine White Pine Contest stress the fact that it was surprisingly easy to win. All contestants had to do was read over the copy of the free eight-page Genuine White Pine Booklet and write their opinion on the official contest entry blank which is the back cover of the booklet.

A total of \$2,000.00 in prizes is being awarded in the four monthly contests. The June and July contests have closed, but the August and September contests are open and all are invited to compete for one of the seven worthwhile monthly prizes.

The winners for July are as follows:
First Prize, \$250.00 — Neil H. Tasker, 32 So. 6th St., Shamokin, Northumberland County, Pennsylvania.

Second Prize, \$100.00 — Alexander M. Kennedy, 1256 Kansas Avenue, Akron, Summit County, Ohio.

Third Prize, \$50.00 — Jessie Rockefeller, 4 Clinton Circle, Cobleskill, Schoharie County, New York.

Fourth, Fifth, Sixth and Seventh Prizes, \$25.00 each — Robert H. Leslie,

Sarver, Butler County, Pennsylvania; Irving A. Heywood, Batavia, Genesee County, New York; Charles M. Squire, Lindsey, Sandusky County, Ohio; Harry D. Parker, Holland Patent, Oneida County, N. Y. (Powell Road R.F.D. 1).

A White Pine booklet is worth having. It is interesting and informative for anyone who is planning building or remodeling or in working with "The Wood of our Pioneer Ancestors", Genuine White Pine. The booklet which contains the Official Contest Entry Blank can be obtained from the local Weyerhaeuser 4-SQUARE lumber dealers or by writing direct to the Weyerhaeuser Sales Company, Saint Paul, Minnesota.

If you have attended previous World's Fairs, you realize how tired your feet can get. At the New York World's Fair farmers will find a spot to rest in the hay loft in the barn on the Electrified Farm. It is outfitted for that purpose, and is not open to the general public but is maintained for the farm friends of THE ELECTRIC UTILITIES EXHIBIT CORP.

Readers of *American Agriculturist* may write to the Research Department of the DR. L. D. LEGEAR MEDICINE CO., 4161-4175 Beck Ave., St. Louis, Mo., for advice on problems concerning care of livestock, poultry or dogs.

SEARS, ROEBUCK & CO. of Chicago, Ill., has a very helpful bulletin called "Instructions for Installing Water and Pumping Systems." It is well illustrated, and contains a wealth of information for the man who plans to do his own installation.

PAPEC MACHINE CO. of Shortsville, N. Y., will be glad to send "More Profit per Acre," a bulletin which gives information on making and feeding hay silage, stacking chopped hay, filling silos, and handling straw. It is illustrated with 74 pictures.

TIOGA MILLS, Dept. AA-839, Waverly, N. Y., have four new bulletins — one on dairy cows, one on turkeys, one on poultry and one on hogs. Send requests by post card, or use the coupon on page 8 of the August 19 issue.

THE SISALKRAFT CO. of 205 West Wacker Drive, Chicago, Ill., has been interested for some years in giving suggestions to those who wish to erect temporary silos.

They will be glad to send you the little pamphlet "How to Build a Sisalkraft Temporary Silo."

NEARBY MARKETS for NEARBY POULTRYMEN

PULLETS with a PEDIGREE

By H. L. COSLINE.

"IF WE EXPECT to make any progress in breeding hens for higher production, I am convinced that we must do it by keeping family records."

The speaker was Eli Bodine of Chemung County, N. Y., when I visited his poultry farm recently. He was not expressing a theoretical belief, but a conviction based on experience. On his farm are well toward 15,000 birds, including between 6,000 and 7,000 layers, 5,000 pullets and 1,500 cockerels.

In a card index file are pedigree records of the breeding flock of 2,500. In fact, every bird, including pullets, is leg banded and a pedigree, in some cases going back ten or eleven generations, is available for every bird on the farm.

Records kept on hens and males in the breeding flock show not only the egg records of daughters, but mortality as well. Mr. Bodine finds that the mortality is much higher in some families than in others, and it is his aim to weed out the families that die. At first thought, you might feel that they will weed themselves out, but as Mr. Bodine points out, there are always enough survivors, some of them high producers, to perpetuate the family.

The immediate reason for my visit to Mr. Bodine's farm was to get firsthand information about his experience in raising pullets on a separate farm. Last year he purchased a 200-acre hill dairy farm about three miles from his main plant.

This step was taken after a lot of thought. "I wasn't forced to do it," said Mr. Bodine, "because our records show that last year our mortality on chicks up to July 1 was 3.1 per cent, which I do not consider bad. However, for the past five years, up until this year, I felt that I had not been growing pullets that were quite as good as I had in the preceding five years. I decided to do something about it before I had to."

"I do not feel that there is much advantage in moving pullet ranges to the back of a farm so long as the same men care for both pullets and hens and so long as the food is trucked out from the poultry house and poultry manure put on that land. On the hill farm I bought there was a good substantial dairy barn. We remodeled it, putting in three floors and eighteen pens, with capacity for 7,000 chicks. We built the pens crosswise of the barn, 10 ft. wide and 32 ft. deep, with a hover at the back end of each pen. The hovers are heated with a central hot water heating plant, and we can regulate the temperature in each individual pen. The advantage of this ar-

While Dad looks on, Miss Janet Bodine is sorting into family groups wing bands taken from all of the chicks that died on the farm up to July 1. It looks like a lot of bands, yet the mortality is around 3 per cent, which every poultryman will agree is low. This is being done to determine what families have high livability.

range is that the front of each pen is cool. The chicks range all over the pen, and when they get a little chilly they move back to the hover.

"We take chicks to the hill farm as soon as they are hatched, beginning the first of March and continuing to the first of June. When the first ones are ten weeks old, we move them out on range. Later in the season they go out when they are six or seven weeks old. We have 77 range shelters, and now have 5,000 pullets and 1,500 cockerels. Early in the spring two men are required to care for them, but I intend to keep one man there the year around and there will be plenty of work in cleaning up, repairing and doing odd jobs after the pullets are brought down to the main farm."

Part of this story was told in the office at the main poultry farm. Then we climbed the hill to see the pullets. They certainly are a beautiful, uniform bunch. Some of them are already laying on range, and will soon be taken down to the main farm and put in houses. They are not allowed to range after they are once put in the laying house.

Mr. Bodine feels that the pullets raised this year on the hill farm are just a little better than any he has had for the past five years.

"What are you planning to do with the rest of the land up here?" I asked Mr. Bodine.

"We are planning to do most of our farming down in the valley," said Mr. Bodine. "I recently bought a few Aberdeen Angus beef cattle to use some of the pasture and roughage on this place."

Interesting as chickens are, I always find people more so. Mr. Bodine is conducting a real breeding program. His

(Continued on opposite page)

Part of the range shelters which give shade to 7,000 pullets.

(Continued from opposite page)

hens in his breeding pen have all produced at least 200 eggs a year. He has built up this business over a period of years until he now hires an average of eight men the year around to do the work.

Every poultryman can find several things about the poultry business that he wishes were a bit different, yet here is a poultry farm that has provided funds for expansion and has given a fine home with modern conveniences. It is sending a fine family of ten children through school. Janet has a full time job doing the office work and keeping the records on the hens. One son will enter Cornell next year, while another manages a local farm supply store.

Here is a farm where definite constructive plans have been laid out and are being followed with an efficiency and accuracy in details seldom found.

Obviously the man with a small or medium sized poultry business cannot afford to own a separate farm on which to raise his young stock. Mr. Bodine does not recommend that everyone should necessarily adopt his plan, and I am reporting it as an interesting development which may grow.

Just for fun we discussed the possibilities and agreed that in years to come we might find that men located on hill farms would specialize in growing pullets. Mr. Bodine has demonstrated that, with the exception of a few weeks in the spring, one man can care for over 8,000. He believes, also, that poultrymen interested primarily in market eggs would be glad to pay a reasonable price for pullets raised under those conditions.

With that number of pullets, simple arithmetic shows that a modest profit per pullet would enable a man to make a comfortable living. The whole idea, of course, is not to keep laying hens, but to raise pullets on what we might call a quarantine basis and to have the pens and range shelters empty for several months during the year, during which time they will be entirely cleaned and disinfected.

Anyway, the idea is something to think about.

Grange Gleanings

(Continued from Page 7)

bership, all blood relatives of Joseph W. Roy, who was the founder of Lakeview Grange in 1906. He was assisted in the work of institution by former Governor Charles J. Bell, who was for several years master of the Vermont State Grange and an influential member of the executive committee of the National Grange. At a recent meeting of Lakeview Grange the Roy family "took charge", filling all the officers' stations and providing the complete program of the evening.

* * *

AN IMPRESSIVE MEETING of Win-nipisaukee Grange at Meredith, New Hampshire, August 4, had the unusual

opportunity of seeing a State Master present a Golden Sheaf certificate to his own father, attesting the latter's continuous Grange membership of 50 years. The recipient of the certificate was William H. Neal, who joined Win-nipisaukee Grange half a century ago in a class of 48 candidates, and the presentation was made by State Master William J. Neal, his son. A large assembly of Patrons witnessed the unusual event.

* * *

THE NEWEST subordinate Grange in Connecticut, located at Redding, with a charter list of 53 signers, is making a promising start. Recently a benefit dance was staged, and won such hearty support that \$62 in net profits swelled the Grange treasury.

* * *

PORTLAND HAS BEEN selected as the meeting place of the 1939 session of the Maine State Grange, scheduled for three days the first week in December. The biennial election of State Grange officers will be an important feature of the convention.

Johnny Is Growing Up

Do you remember Johnny Steinbrugger, the kid who had 21 operations and who wanted to grow up to be a good chicken farmer? Johnny still

wants to be a farmer, but lots of things have happened to him in the past two years, since his family got discouraged with trying to make a living in the East and headed West in their old Ford.

Out in California, Johnny had the good fortune to get a free course in Miss Meglen's famous Dance School, and in spite of his operations has become an expert dancer. An invitation to be on Major Bowes' radio program has just brought him clear back across the country to New York City—hitchhiking all the way. Incidentally, Johnny doesn't like this picture of himself. He writes: "Please don't think I've gotten to be a sissy. Honest that darn dimple don't show only in the picture, and the darn waves I keep wet down with water."

Running Water

(Continued from Page 3)

College of Agriculture, power companies and companies manufacturing water systems are cooperating to emphasize the importance of running water and to supply information that will help to install running water in a way that will give satisfaction. Meetings have already been held in several western New York counties. Bulletins are being furnished, a program of radio talks is being considered, and stories on running water are being sent to local papers.

Helpful Bulletins

Here is a list of bulletins containing information on water systems. The U. S. Department of Agriculture bulletins cost 5c each, and can be obtain-

ed by writing the Superintendent of Documents, Government Printing Office, Washington, D. C. (send coins). In general the bulletins of state colleges are free so long as they are available to residents within the state. A charge, usually 5c, is made where these bulletins are sent outside the state.

U. S. Dept. of Agr., Washington, D. C.—Farmers' Bulletin 1426—Farm Plumbing; Farmers' Bulletin 1448—Farmstead Water Supply.

N. Y. S. College of Agr., Ithaca, N. Y.—E-392—The Shallow Well Water System; E-145—The Farm Water Supply.

Maine College of Agr., Orono, Maine.—250-B—Running Water for Farm and Home.

New Hampshire College of Agr., Durham, N. H.—Circular 34—Electric Laundry

Equipment on the Farm.

Connecticut College of Agr., Storrs, Conn.—Bulletin 115—Water at the Kitchen Sink; Bulletin 183—How to Build a Septic Tank.

Massachusetts College of Agr., Amherst, Mass.—A-143—Septic Tanks for Farms.

New Jersey College of Agr., New Brunswick, N. J.—E-127—Pollution of Wells and Its Prevention; C-381—A Septic Tank Disposal System.

Electric Water Systems Council, 420 Lexington Ave., New York City.—Your Magic Key to Running Water Profits; Getting Running Water First.

Pump and water system manufacturers will be glad to supply catalogs on request, and in some cases they also have helpful pamphlets on the installation of running water and sewage disposal systems.

BABY CHICKS

All chicks produced from flocks tested for Pullorum Disease (B.W.D.) by the Official State testing agency of one of the six New England States, with NO REACTORS FOUND. Tube Agglutination tested within the preceding calendar year.

"WELL BRED from WELL BREEDERS"

"Never a week without a hatch" since 1927. Pullorum Free by State Test since 1928. Quality chicks since 1911. Catalogue free. We ship prepaid, and guarantee 100% live delivery.

HALL'S Chicks have been selected by the Agricultural Committee for the POULTRY FARM OF TOMORROW at the New York World's Fair, 1939.

Hall Bros. Hatchery, Inc., Box 59, Wallingford, Conn.

Last Call for Jams and Jellies

By
MRS. GRACE WATKINS HUCKETT

IF you haven't been taking full advantage of summer's rich store of fruits to stock cupboard and cellar shelves with row on row of shining glasses filled with tempting jams and jellies, it is not too late yet to do something about it. Quinces, crabapples, pears and apples, peaches, and grapes are still with us and are rich sources of such delights.

Remember that in order to make good jelly a fruit juice must contain acid and pectin in the proper proportion; sugar is added and also should be in the proper proportion. Apple, crabapple, and partly ripe grapes are among the fall fruit juices that make good jelly when used alone. Peaches, pears and ripe grapes need to be combined with other fruits rich in pectin, or should have extracted pectin added to them. Since the pectin in slightly underripe fruit is developed in cooking and may be lost entirely in overripe fruits or too long cooking, it is important to bear this in mind when making jelly.

The concentrated pectin which may be bought in liquid or powder form has been subjected to much heat in preparation; hence it is neither necessary nor wise to heat the fruit more than the few minutes the directions advise. The directions given with the package should be followed carefully since they have been developed to give the most satisfactory results with that particular pectin. Several types of combined fruit juices and pectin are now in the market for use in making quick jellies.

PEACH JELLY

To make peach jelly, using concentrated pectin, take 3 cups juice, $6\frac{1}{2}$ cups sugar and 1 cup pectin. For elderberry jelly, use $3\frac{1}{4}$ cups juice, 8 cups sugar and 1 cup pectin. In both cases the juice is extracted in the usual way, the necessary amount of sugar is added, the mixture brought to the boiling point, then the pectin added and all boiled vigorously for 1 minute. The jelly is then removed from the heat, skimmed and poured into hot glasses.

QUINCE JELLY

Quinces have too little acid and too much pectin to make a desirable jelly when used alone. An equal amount or twice as much tart apple improves the flavor and the texture. Quinces require long cooking either under steam pressure or in the fireless cooker. They should be cut in small pieces and enough water added to float them. When fruit is tender, drain off the juice and combine with $\frac{2}{3}$ as much sugar. This is cooked until it sheets from a spoon or reads from 219° to 221° on the sugar thermometer. The pulp may be used for conserve or butter.

APPLE JELLIES

Apple juice alone makes good jelly or, because of its bland flavor, combines well with others which may lack pectin. Good combinations are: apple and rhubarb, apple and pineapple, apple and cranberry, and apple and wild grape.

Juice is extracted from fruit which has been looked over carefully, washed, and blossom ends and decayed parts removed. It is not necessary to peel or to core the fruit, since these parts contain much pectin.

The firm fruits should be cut in small pieces and covered with water, about 1 pint of water per lb. of fruit. The fruit is cooked just long enough to soften it and then strained through a wet jelly bag. The juice is then measured and $\frac{2}{3}$ as much sugar as fruit is added, stirring slowly until sugar is dissolved. The mixture is boiled rapidly until it gives the jelly test. Attractive, fancy jellies may be made from various apples by making the following combinations:

Geranium Jelly: Put a rose or pineapple geranium

leaf in the glass of apple jelly and leave until jelly is almost cool.

Rosy Pink Apple Jelly: 5 lbs. red Astrachan apples, 1 quart strawberry juice, juice of 1 lemon.

Dark Red Apple Jelly: 5 lbs. Gravenstein apples, 1 quart blackberry juice.

Crimson Apple Jelly: 5 lbs. Spitzenburg apples, 2 cups canned pineapple juice.

Bright Red Apple Jelly: 5 lbs. Newtown Pippins and juice of 2 oranges.

Amber Apple Jelly: 5 lbs. Northern Spy apples, juice of 1 lemon.

Mint Apple Jelly: 5 lbs. White Pearmain apples, 10 stalks crushed, fresh mint, juice of 1 lemon. This should be made in small quantities because it is apt to fade.

Many-Colored Apple Jelly: Fill glass $\frac{1}{3}$ full of 1 jelly, allow it to set, add another color to fill glass $\frac{2}{3}$ full, and when it is set fill with another color. A good combination of colors is amber, mint and rosy pink.

BARBERRY JELLY

Another unusual jelly is made from barberries which should be picked before frost. To each quart of berries allow 1 cup water for cooking until tender, strain through jelly bag and use $\frac{3}{4}$ as much sugar as juice. Cook until it gives the jelly test. An equal amount of apple juice added to the barberry juice gives a lighter colored jelly.

GRAPE JELLY

In extracting juice from grapes, no water need be added for the first extraction. Just crush the fruit and cook it in its own juice. For a second extraction, water to cover may be added to the pulp, mixed well and simmered for 30 min. and again strained. If any fruit is pressed while straining, the juice should be strained again to prevent cloudiness.

If ripe grapes are used it is necessary to add pectin, either in the commercial form or in some other fruit juice. Ripe fruit adds flavor and in most jellies it is wise to combine a certain amount of ripe fruit with the underripe for jelly. Wild grapes give a tanginess which is very pleasing to jams, jellies and juices. It has to be a rare occasion when I bring out my wild grape juice.

GRAPE JUICE

For juices, the extraction is made in exactly the same manner as for jelly. One-half to 1 cup of sugar per gal. of juice is added, depending upon tartness,

stirred until it is well dissolved, the juice reheated to the simmering point, put into bottles or glass cans, sealed and processed in a hot water bath for 10 min. at the simmering point. Water should be 2 inches over the tops of jars. Store in cool, dark, dry place.

If grape juice is made into jelly, allow $\frac{3}{4}$ cup sugar per cup of juice and cook a small amount in a shallow pan until the jelly point is reached.

WILD GRAPE AND APPLE JAM

Wash grapes, discard all poor ones, but do not remove good ones from the stem. Add cold water to one-third the depth of the fruit. Boil mixture rapidly about 30 min. Drain fruit as for jelly, measure the juice, and add an equal quantity of tart diced apples. Crabapples are excellent for this jam. Next add two-thirds as much sugar as apple and grape juice combined.

Boil mixture rapidly until it is thick and clear. Pour the jam into clean, hot jars and seal them; or pour it into clean, hot glasses and, when cold, cover jam with hot paraffin. If glasses and paraffin are used, mixture should be cooked to a jelly-like consistency.

COMBINATION RIPE GRAPE JELLY AND BUTTER

Stem about 7 lbs. fully ripe grapes and crush thoroughly. Add $\frac{1}{2}$ cup water; cover and simmer 5 minutes. Place fruit in Canton flannel jelly bag to drip. To hasten dripping, turn pulp over about every 5 minutes, without opening jelly bag, by holding bag on each side and stretching cloth, thus bringing up bottom of bag. Drip until 4 cups juice have run through. Use juice for ripe grape jelly. Sieve pulp left in bag to remove skins and seeds. Use sieved pulp for ripe grape butter.

RIPE GRAPE JELLY

$7\frac{1}{2}$ cups ($3\frac{3}{4}$ lbs.) sugar
4 cups (2 lbs.) juice
 $\frac{1}{2}$ bottle fruit pectin

Measure sugar and juice, as prepared above, in to large saucepan and mix. Bring to a boil over hottest fire and at once add bottled fruit pectin, stirring constantly. Then bring to a full rolling boil and boil hard $\frac{1}{2}$ minute. Remove from fire, skim, pour quickly. Paraffin hot jelly at once. Makes about 11 glasses.

Peaches, pears, and ripe grapes need to be combined with other fruits rich in pectin, or should have extracted pectin added to them.

15 requires 3 1/4 yards of 39-inch material, 3/4 yard binding.

JACKET DRESS PATTERN No. 2735 is highly useful for fall with its simple frock and extra jacket. Later, both may be worn under a top coat. Choose the one of the three necklines which is best for your type. Pattern sizes are 14 to 48. Size 36 requires 3 3/4 yards of 39-inch material, 1 3/4 yards 35-inch contrasting for short sleeved dress with contrasting waist and jacket.

TO ORDER: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our fall and winter fashion catalog.

Confession

By DONA C. PECKHAM.

This daily life becomes so real
I reach my hand out and I feel
The mighty, ceaseless, warm pulse-beat
Of all that makes my *Here* complete.

Will I be happy — can it be —
In Heaven, now You've given me
This earthly home, Love glorified?
Dear God, will I be satisfied?

Today in Aunt Janet's Garden

Can Already See Next Year's Buds

DURING the past summer I have watched with interest dates on which our shrubs set flower buds for next year's bloom. Naturally the early flowering shrubs showed theirs before the later flowering ones did. By mid-July the lilacs showed bud formation plainly at the end and sides of stems, as did the mountain andromedas which bloom in March. The fragrant May-flowering Viburnum (V. Carlesii), whose flowers look and smell like trailing arbutus, ran true to form by showing pronounced buds as early as the lilacs. The little daphne had a cluster of buds at the end of every stem.

Rhododendrons, variety Boule de Neige, had well formed buds, while dogwoods began to show theirs later, the Chinese variety showing later than the native. Incidentally, the buds of the Chinese dogwood are pointed, the native being round.

The shrubs which bear berries are always attractive to our feathered friends as well as to ourselves. The Tartarian honeysuckle, with its translucent red berries appearing in summer, is extremely decorative on the bush and in flower arrangements. Later in the season Regel privet will be covered with clusters of purplish berries, equally attractive outdoors and in.

We are advised not to prune any deciduous shrubs later than September 1st, since pruning tends to stimulate new growth which later might be winter-killed. It is also obvious why we are advised to prune lilacs and other early blooming shrubs immediately after blooming, instead of waiting until mid-summer. Any shrub has to be held within bounds by judicious pruning if it is to keep a good shape and thrive, but its habits have to be considered.

Perhaps our most colorful shrub in autumn is the barberry with its leaves showing autumn tints and its bright red berries. We like it with the stretch of green grass in the foreground and a background of privet hedge.

The single bush roses yield red or orange hips for autumn accent in addition to their colorful flowers earlier in the season. Their foliage is also most interesting with its crinkly and sometimes spiny surface. These roses are better for landscape effects than for cutting.

Swing for FALL

FALL FASHION news indicates a nipped-in waist with skirt fullness which gives plenty of swing. Foundation garments which lace like an old-timer are indicated (but the newer ones are far more comfortable).

Dress materials are full of interest and color. Lightweight woolen fabrics may even be shirred and draped, while velvety textures, hairy surfaces, plaids and velveteen are offered for more tailored types.

DRESS PATTERN No. 2629 is right up to the minute in line and particularly suitable for the lightweight woollens or crepe silks. A touch of white binding tends to give a fine, wide shoulder line. Sizes are 11 to 19. Size

"We drew straws with our daughter, to see who would get the parlor tonight and we lost."

Old Home Week at Waynor

I. Nathaniel Morrill's Bonfire for Buchanan.

EDITOR'S NOTE: "Old Home Week at Waynor" will run in four installments, but each story is complete in itself.

TWO HUNDRED and eighty-three towns are said to have celebrated Old Home Week in August, 1903, and the published programs of their addresses of welcome, orations, poems and odes make interesting reading. But I do not believe that there was anywhere a grander bonfire than the one we had at Waynor, on Wilkins High-top. There may have been more eloquent orators, more rhythmic poets, and perhaps finer dinners and better brass bands—for we are not saying much about our brass band or our poet. But our bonfire was our strong point, and we are ready to match it against anything else that blazed that year.

We had a rick of old pine stumps, roots, logs and small wood as large as a two-story house, five tar-barrels, twenty pounds of "red fire", four dozen bomb rockets, and the venerable brass cannon that has been in town sixty-five years—and not burst yet!

Eighteen of us worked two days with axes, teams and a stump-machine to get that rick of combustibles together; and we kept it burning all night long, with salvos at intervals of an hour. And the purport and significance of it was to light all wanderers home to Waynor, however far any of them had strayed away.

Our Home Week committee started with enthusiasm, resolved to bring back every son and daughter of the old place.

Our "long call" was heard. We had no idea there were so many who claimed Waynor as their birthplace. Generally speaking, things are rather quiet with us. On any ordinary August day or evening one can almost hear corn grow in Waynor. For our people are nearly all farmers, and most of the wide-awake boys have been in the habit of leaving us, for the city or the West, ever since 1850.

The youngsters wanted more room and a wider field for money-making. They went everywhere—to Kansas, to Minnesota, to California, and even to Mexico and South America. We had little idea how many the old town had lost in that way till Home Week opened. Then the town filled up, and we realized why we had been so lonesome.

I am sure that the reader will cheerfully take the public exercises at the town house for granted: the address of welcome, the speeches in reply, the oration, the poem, the hymn, "Old Waynor", and all the rest of the "heavy business" of the opening day. We had it, of course, but there is no need of dwelling on it here.

The more interesting part came in the evening. For although many had then dispersed to the homes of friends and relatives, a hundred or more remained at Waynor Center—formerly Dennett's Corners—to talk over old times together, tell stories and watch the bonfire, now flaming high and bright.

The long piazza at Dennett's faced Wilkins High-top, and here, after dinner, sat the old boys of the town—John Palmer and "Wash" Baker from Ogden, who had not been in Waynor for twenty years; Morris Washburn from Galveston, still longer away; Judge Henry Swett from St. Paul, Hon. Maxwell Cole from Lincoln, Nebraska, Prof. Marcellus Brooks and his sister Statira from Providence, Frank Long

from Portland, Oregon, and his brother Charley from Seattle; Will Larabee, railway conductor on the Great Northern; Orrington Gurney, ranchman from Oklahoma, and Schoolmaster Hubbard, eighty-five years old, who had taught ten winters at the Center long before the Civil War—these and many more, with their wives and numbers of young people.

"What does that bonfire remind you of, Wash?" Palmer called out from the far end of the piazza.

"Presidential election!" was the instant reply.

"Thought it would," said Palmer. "Seems to me I can almost hear them there shouting, 'Hurrah for Fremont! We'll give 'em Jessie!' When you old residents were laying your bonfire yesterday you didn't happen to

By C. A. STEPHENS

notice any white spots up there on the ledges, did you?"

In truth we had.

"Well, those were where we had our presidential bonfires away back in 1856 and '60 and '64 and '68; and they do say that our fathers before us had one there when Andrew Jackson was elected. But the Fremont and Buchanan election is the one I remember best."

"Yes, that was the greatest of all presidential elections for me," said Baker. "I was fourteen then. I never expect to be so excited over politics again. It seemed to me then that if Fremont and Dayton were not elected, this country wouldn't be worth living in another day. Remember that campaign, Judge Swett?"

"I should think I do! But I was a Buchanan man, you know, or at least my father was. It was 'Buck and Breck' with us."

Then silence fell, the silence of many busy memories, until Palmer remarked

that he would give a great deal if only Nathaniel Morrill could be with them there.

"So would I!" exclaimed several voices at once, and a sigh stirred the hearts of the old boys.

"If political disappointment could kill, Nat Morrill would have died that fall," Charley Long remarked, at last.

"That was the first time that Nat voted," Professor Brooks said, reminiscently. "He was twenty-one that October, and if ever a young fellow acted from principle, he did. Uncle William Morrill, his father, was an old-time Democrat. But after Hannibal Hamlin came out a Republican, Nat did the same. Uncle William was savage against it. He called Nat a turncoat; and they say the old gentleman even tried to thrash him!"

"It was so all over the state," Palmer remarked. "That was the time when the youthful conscience of the nation broke away from old parties."

"The word Republican had not come to be used much then. Nathaniel called himself a Free-soiler at first. Political feeling ran terribly high that fall in this state. Old neighbors came to blows over it. A new national party was being born. Nat did not dare to say much at home; but outside, in the school district here at the Corners and throughout the town and county, he worked like a missionary, both before and after Fremont and Dayton were nominated. Didn't the Buchanan men hate him!"

"Well, didn't we, though!" said Judge Swett. "His father and my father talked it over and had it planned to have Nat shut up for a lunatic. I believe Uncle William Morrill really thought that Nat was crazy."

"A good many thought so," said Palmer. "Nat had a little money, and there was a 'Life of Fremont' just published, describing all his expeditions across the continent to California. It was these expeditions, you know, that gained him the name of the 'Pathfinder.' Well, Nat bought thirty of those 'Lives' at a dollar apiece, and gave them away to be read in families where he thought they would do good. And he bought a lot of torches on his birthday, for evening processions. Uncle William was furious over that. He tried to break up the sale of them to Nat, but was a little too late; Nat was just twenty-one. It was a matter of

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines and poem must be original and written by an amateur. \$2.00 will be paid to the author of each one printed. Check will be mailed on or about first day of month following publication.

Loneliness

I wonder if the pansies by the wall
Are ever weeded? And the tall
Young maple standing near the garden
pool—

Does someone ever in the cool
Of evening lean on it and think of me
Who used to dream beneath the tree?
I often wonder when the lights are low
How things are going. I loved it so,
And now I can no longer go back home.
I can't forget the scent of loam
New-plowed, and often I smell again
The hillside drenched in cooling rain.
I left last spring, and summer scarce
has fled—

God, I'm so tired of being dead.

—Emily Clark,
New Milford, Pennsylvania.

conscience on both sides. Each was quite honest in his way of thinking, and that made it all the harder for them both.

"After October there was a rally nearly every night in Waynor, by one party or the other, and as election day drew on, the political caldron seethed tremendously. Both sides seemed about equally confident. The Buchanan men were burning with resentment toward the many deserters from their ranks, and the Free-soilers were fired with enthusiasm for what they deemed a great moral revolution to insure equal rights for all.

"At school we had a good many hot discussions; but Master Hubbard kept us in order, for the most part.

"Then one day, I think it was the first day of November, Nat Morrill put forth a challenge to all the Buchanan men in town to go up to Wilkins High-top with the Fremont men and build the biggest bonfire rick ever known, to celebrate the presidential victory. Not a union bonfire, by any means, but a challenge! Whichever party won was to burn the rick in token of victory. It was a 'dare', and intended as a test of confidence on the part of the opposition. 'You don't dare go up there with us and do half the work on a rick!' Nat said to them.

"Truth to say, the Buchanan men hung back a little at first, for if they were defeated it would be gall and bitterness to see the rick which they had worked to collect, burn for that 'gray mustang,' Fremont.

"The gray mustang's too much disguised, du-da, du-da,
To run where folks are civilized, du-da, du-da-day!

"That was part of a campaign song that fall.

"But a day or two later Uncle William Morrill, Nat's father, who of late had received an encouraging letter from a brother Democrat out in Pennsylvania, accepted the challenge, as much out of spite as anything, I surmise. Uncle William got together thirty-eight Whigs and Democrats, and Nat had to do some lively work to collect as many Free-soilers who wanted to put in a hard day's work on the High-top. But he got them, and the seventy-six of us went up there and fell to work, building a rick, collecting dry stumps, logs and brush. We felled as much as two acres of spruce growth back of the hill. Axes rang merrily. We dragged all the mass of combustibles up the hill and laid a pile thirty

The Song of the Lazy Farmer

SINCE we got back home from the fair Mirandy's had no time to spare, she's got an idee that some dust got in the house and so she must go over it from stem to stern, and tear it up, and overturn the whole blamed place for fear a speck of dirt she'll miss, and so, by heck, she's beatin' rugs and dustin' chairs, that woman's got more work and cares than any president or king, she has to upset everything, she'll never stop until she can be sure this house is spick and span. I like to have her clean and neat, but she could take time out to eat, or else to cook, at any rate; I'm tired of sittin' with my plate upon the steps, where I must hunch my shoulders over my cold lunch.

I'd rather have a little dirt upon the floor or on my shirt than not have half enough to eat, because when night comes she's too beat to cook me up a sirloin steak with onions and a chocolate cake. If this keeps up, the first thing she knows there won't be nothing in my clothes except a pile of bones, may be when that is all that's left of me she'll realize that cleanliness is overdone, and that a mess of ribs and sour krout now and then is what it takes to keep us men a-goin', even if the floor ain't scrubbed each afternoon at four. It's nice to have things clean and neat, but it is nicer yet to eat!

feet high and forty feet in diameter, with a draft hole at the center.

"In all my life I never heard so much chaff or so much jeering and taunting passed back and forth. And it was far from being good natured chaff. There was a great deal of hard twitting on facts in dead earnest. The two sides kept a little apart and by themselves. But when either side dragged a large log or stump up to the rick some one would yell, 'That will burn good for Buchanan!' or 'That will dazzle your eyes for Fremont!'"

"Well, we built the rick, and at sunset we all stood round and cheered it. Master Hubbard made a little speech, and pledged both sides to fair play. The rick was to stand there till after election, and then be burned for whichever candidate was lawfully elected. There was not much harmony, but a kind of agreement to that effect was made.

"Election day came, and the result is now a matter of history. We did not succeed in giving them 'Jessie'. The 'Pathfinder' did not find the path to the White House. The 'gray mustang' did not prove a match for the 'old white hoss' on the presidential track.

"Election tidings did not then travel as fast and accurately as at present. In New England the news at first was to the effect that Fremont had won. We did not sleep much that week. Nat spent Tuesday night and Wednesday at the telegraph office in the railway-station, five miles from Waynor; and Wednesday afternoon, just at night, the telegrams were all so favorable to Fremont that Nat had no doubt whatever that the Free-soilers—as we still called the Republicans half the time—were victorious. Home he came, running his horse, hurrahing all the way. Frank and Charley Long were with him. We heard them coming while still a mile below the Corners."

"No doubt that's so," Frank Long remarked. "We yelled ourselves so hoarse that we could hardly croak. It had begun to rain, too. Nat didn't stop to unharness, but got matches from the kitchen, ran for the High-top, and touched off the bonfire. Uncle William rushed out, took a look at the sweaty horse, and shook his fist after Nat."

"It did not make much of a blaze," Palmer resumed, "for, as Frank says, it had set in rainy. The fog shut down on the High-top. Not half of us knew that the rick was burning, and all any one saw was a red blur in the mist. The next day Pennsylvania and Indiana were heard from, and then the Buchanan men began to hurrah—and they kept on hurrahing! Uncle William fairly raised the roof at the Morrill homestead.

"Nat left the house. He came round to see the rest of us, pale as a ghost. He seemed stupefied. 'It can't be! It can't be!' he kept saying, 'It can't be!'"

"But it was."

"Then began a pretty rumpus about

the bonfire! Nat was in an awful fix. He knew not what to do or say. Uncle William and all the rest of them 'rubbed it in' to Nat pretty hard. 'Where's our bonfire?' they demanded. 'Where's our bonfire? What kind of man are you?'"

"The rest of us Fremonters tried to brazen it out. We put Nat up to give the Buchanan men the laugh and bid them help themselves if they could. But Nat was nearly sick. He left home and stayed at Nathan Palmer's at night. Uncle William was giving him 'Hail Columbia' every minute.

"Some time before, Nat had engaged to teach a small school in a rustic district called Pisgah, in an adjoining town. He went there the following Monday, and we saw nothing more of him for two weeks. Matters quieted down a little. During the fortnight he had time to think the affair over, with the benefit of a change of scene, and made up his mind what to do. He said nothing to any one, but on the second Saturday, which was a school holiday, he came over to Waynor with ten men, whom he had hired to work with him.

They went up to the High-top and set to work building a new rick.

"It was noised around among us what was going on, and in the afternoon we rallied and went up to help Nat out. And if you will believe it, along about two o'clock nine or ten of the Buchananites made their appearance with their axes, all laughing, and took hold with us,—Judge Swett here was one of them,—and I never saw a better-natured crew working together. We put up a rick well-nigh or quite as good as the first one; and that evening, before he went back to Pisgah, Nat called at the homes of the Buchanan men and said:

"Your bonfire is all ready for you, gentlemen; sorry for the delay. I hope it will burn well."

"That was Nat Morrill all over!" Baker exclaimed. "There was good stuff in Nat. Let's see, he went to Colorado, didn't he?"

"Yes," replied Palmer. "Nat was a Representative to Congress from Colorado for four years, and he was the leading candidate for Governor when he died."

the judges.

Our second prize winner, Mrs. Fannie Delameter, writes us: "I was born on a farm, grew up there, and now live on a farm, and greatly like the life. I have never written any other plays except a few little skits for assembly programs, and two church pageants. We enjoy home talent plays here and I have directed several of

Second Prize winner, Mrs. Fannie H. Delameter, of Treadwell, N. Y. "The gentleman in the picture," writes Mrs. Delameter, "is my husband."

community programs. They may be obtained from their authors. The list includes:

Quiz School, by Jane Proctor, Crescent Lake, Maine.

Old Pop's Predicament, by Mrs. Chester Partridge, Windham, N. Y.

Cleaning the Attic, by Mrs. William E. Bellen, Mayfield, N. Y.

Pigs in Clover, by Florence E. Shaver, R. 1, Cobleskill, N. Y.

The Longest Arm, by Mary S. Hitchcock, Hannawa Falls, N. Y. (This is a play which might be used by a group wishing a strong prohibition play.)

Winners of Cash Prizes in Our PLAY CONTEST

LAST NOVEMBER, *American Agriculturist* announced a playwriting contest in cooperation with the Cornell University Theatre, and offered cash prizes for the best amateur one-act plays dealing with subjects of rural or local historical interest. A very interesting group of plays were turned in by the contestants, and included more than thirty manuscripts reflecting rural or folk life in some aspect.

Judges for the contest were Professor H. W. Thompson, of State Teachers College, Albany, N. Y.; Professor A. M. Drummond, director of Cornell University Theatre, Ithaca, N. Y.; and Robert E. Gard, Rockefeller Fellow for New York State Rural Plays. In choosing cash prize winners, the judges held to the rules laid down at beginning of the contest, which specified that in addition to being about rural or folk life, plays must be long enough to take approximately 30 minutes to play. We take pleasure in announcing the following cash prize winners:

First prize of \$15.00: Mrs. Grace Smith Beers, Lanesboro, Mass., for her play *Nothing Doing*.

Second Prize of \$10.00: Mrs. Fannie H. Delameter, Treadwell, N. Y., whose play was entitled, *Yankee Makes a Bargain*.

Third Prize of \$5.00: Samuel S. Hale, Oxford, N. Y., for his play *The Antique Shoppe*.

Principal characters in Mrs. Beers' play, *Nothing Doing*, are Seymour Atkins, a wealthy widower from the city, his attractive young daughter, Evelyn, and Mrs. Parker, a capable farm woman at whose home they are staying. Atkins has come for the purpose of marrying Mrs. Parker, a widow, since he believes she will grace his city home as a competent and charming hostess. He finds, however, that she has made her country life too interesting to give up.

Mrs. Beers has been writing skits and plays for the past fifteen years for production by her local farm organizations. She also took part in the recent playwright's contest sponsored by the Massachusetts State College and County Extension Service, and her play was placed among the first ten selected by

First Prize winner, Mrs. Grace Smith Beers, of Lanesboro, Mass.

them." Her play, *Yankee Makes a Bargain*, is a good example of a play based on historical material. In it, the Catskill Turnpike and some of its lore are exploited in an interesting way. The characters include cattle drovers, an innkeeper and his wife and daughter, turkey drivers and a shrewd Yankee who drives a clever bargain for the hand of the daughter.

Third prize winner, Samuel S. Hale, tells us that he took up playwriting as a hobby last year, while convalescing in Florida from an illness. His play, *The Antique Shoppe*, takes its name from its setting, an antique shop located in the country. William, the principal character, finds his women folks and their antique shop a constant hindrance to his fishing plans. The plot is complicated by city folks who come to buy antiques.

The Cornell University Theatre is planning to produce at least one of these prize plays during the coming year.

In addition to the cash prize winners, the judges also selected five short plays for honorable mention. Although these plays do not measure up to the thirty-minute length in the contest conditions, the judges believe that they might be useful for Grange and other

Another Playwriting Contest Begins October 1

OUR AMATEUR play contest has turned out to be so worth while in stimulating interest in writing rural life plays that we have decided to cooperate again with the Cornell University Theatre. This second playwriting contest starts October 1st and will end June 1, 1940. Everyone who has an interesting idea for a play of rural or local historical interest is urged to take part. The judges will be the same as in the contest just finished, and they repeat their offer of assistance to any writer submitting a workable idea for a play.

Prizes will be the same: First prize, \$15.00; second prize, \$10.00; third prize, \$5.00; also a number of honorable mentions, and the possibility of production by the Cornell University Theatre.

Rules and Suggestions

1. Plays should consist of one act, requiring about 30 minutes to play. (This would mean about 15 double-spaced pages of typewritten script.)

2. Stage setting should be simple, making it easy for an amateur group to set it up.

3. It is suggested that the number of women characters should exceed the number of men, as usually more women than men are available as players.

4. As to kind of play, it may be tragedy or comedy, or a jolly or ridiculous farce. It should have a rural background and may be either historical or modern.

5. Plays should be submitted on plain paper, about 8½ x 11 size. They may be either typewritten or handwritten, but must be legible. Mail flat, in large envelop, to Amateur Play Editor, *American Agriculturist*, Box 367, Ithaca, N. Y., not later than June 1, 1940.

Let us know whether you plan to take part. Address all correspondence to Amateur Play Editor, *American Agriculturist*, Box 367, Ithaca, N. Y.

"You wash the dishes very well, Mr. Bryson—I could use a son-in-law like you."

Kernels, Screenings and Chaff

By H. E. BABCOCK

IN THE Midwest the government is reported to be buying and locating enough steel bins to store between forty and fifty million bushels of corn. It is also reported that farmers have been advised that the government will pay them seven cents a bushel annual storage for holding corn on their farms.

This means that our government is investing from seven to ten cents a bushel more in millions of bushels of corn which it owns, as a result of having loaned the producers of the corn more than its market value.

The net effects of the government's corn loans have been terribly unfair to Northeastern poultrymen and dairymen. Last fall when an enormous, *cheaply grown* crop of corn would have meant low feed prices to Northeastern farmers, the government stepped in and supported the market by loans to corn producers. Now, when another good grain crop appears likely, rather than let Northeastern farmers profit by it, the government is again supporting the market with taxpayers' money.

I know of no surer way to ruin the great poultry and dairy industries of the Northeast than to deny them the full, natural benefits of large grain crops.

It would be only fair for the government to make available some of the corn which it has taken over on its loans, to Northeastern farmers on a basis which recognizes the drought, the ruinously low prices of eggs and milk in the Northeast *and gives the feeders of corn the same privileges of earning storage on corn which is given corn producers.*

What the Northeast apparently needs is a good hell-raising congressman who understands Northeastern agriculture and who will see that it gets just treatment from the government.

* * *

Farm Notes

We still are suffering from dry weather around Ithaca. At Sunnysgables and Larchmont we have reseeded, mostly to alfalfa, forty acres

of new seeding we lost. The seed has been in the ground two weeks and hasn't germinated yet.

* * *

When dry weather made it apparent that we would not get any second crop of clover and alfalfa we were quite

cheerful about it. We felt sure there would be a third cutting and to prepare for it we clipped the second cutting on all our fields of clover and alfalfa. Now it begins to look as though there wouldn't be any third cutting. We are not quite so cheerful about this prospect.

* * *

All signs point to the fact that we may expect the first of our hothouse lambs the forepart of September. While this seems to be pretty early, our figures show that our early dropped fall lambs for the past two years have brought us the most money. It has been a hard summer on the ewes—hot

Our experience selling horses to date has convinced us that buyers like matched teams; also, that white faced sorrels with light tails and manes seem to be especially popular. The colt and the filly shown above should grow up to be a well matched pair and one which will please the buyers.

Several times I have mentioned that we like winter barley because it matures in time to furnish the bulk of the fattening ration for our spring pigs. This summer the boys introduced the pigs to their barley ration by using them at night to clean up the ground under the threshing machine.

This season we have harvested between three and four thousand bushels of grain, combining part of it and threshing the rest. For picking up the grain after the combine we like the low tractor-trailer shown above. The boys take it to the field with them and use it to bring out loads of sacked grain whenever they return to the barns.

The hookup shown above is our solution of the problem of handling the straw after a combine. The easy draft of the rubber mounted wagon and hay loader permit the fast walking mules to cover an enormous amount of ground in a day. While one wagon is being loaded, the straw from another is being run through the chopper and blown to convenient locations in our barns.

and dry. Nevertheless, they seem to have come through in remarkably good condition. These crossbred Dorset Merino ewes seem to have a vitality and an ability to get around and rustle a living which are lacking in larger, heavier sheep.

* * *

Grasshoppers have done a lot of damage on our farms and on neighboring fields this summer. There is a lesson to be learned from this experience. If it becomes evident that there are a lot of grasshoppers coming on next summer, the only sensible thing is to secure poisoned bait and the guidance of trained men to combat the pests.

* * *

We sold our wool last week—we finally got our price after holding our clips for three years. Hank trucked the wool directly to the mill and came back with a check running well into four figures. All in all, we feel pretty good about the way our speculation in wool turned out.

* * *

We have darkened the basements of several barns and made them available to young cattle running in pasture. We are convinced that big dividends are paid on the time and trouble necessary to darken the basement of a barn and make it available to loose cattle during fly time. Next year we shall be more thorough about the job than we were this year. The effectiveness of fly control varies directly with the amount of light admitted to the basement.

* * *

Jake has succeeded in bringing the sorrel four-year-olds, Silver and Gold, through their first season without even marking their shoulders. This does not mean that the team has had it easy. On the contrary, they have worked very, very hard. Jake, however, has been on the job and taken the proper care of their collars and shoulders.

* * *

The box we are using for freezing and storing frozen foods has worked well all summer. We still have left in it some lamb, some beef, and a couple of turkeys which we froze last fall. As we have used up the meats we froze last fall we have used the storage space they released for frozen fruits and vegetables. The fruits and vegetables we have frozen right in a quick-freezing compartment in the box itself. With the exception of one or two lots where we did not follow directions as closely as we should, we have been able to home-freeze a universally satisfactory product.

Contracts

Read the print before you sign your "John Hancock" on dotted line.

A good many people sign contracts without realizing it. I refer to what the purchaser ordinarily calls an "order" which he signs when he buys nursery stock, seeds, or perhaps a correspondence course. The purchaser's part of the contract is that he definitely agrees to buy something, paying certain sums at certain times. The company's part of the contract is that they agree to deliver certain merchandise or services. The trouble starts when, after the agent is gone, the purchaser decides that he has made a mistake and writes to the company cancelling the order. The next mail brings a letter stating that the order is not cancellable and that he will be expected to accept the merchandise and pay as he agreed.

In some cases the buyer refuses to accept the merchandise. It is returned to the sender, who likewise refuses to accept it, and it may end up in a public warehouse where it is finally sold to satisfy storage charges. The important thing to remember is that this in no way relieves the purchaser from his legal obligation to pay. The seller lived up to his contract. The buyer didn't, and if the seller wants to sue, the chances are good that he will get a judgment.

The remedy, of course, is to investigate the concern before you buy and be certain that you want what you are buying before you sign.

* * *

Gas and Oil Leases

If your farm is located in a region where there are oil or gas wells or if you are located near such an area, you are interested in oil and gas leases. The money you may get as rental for an oil or gas lease is in a sense easy money, and there is no reason why you shouldn't sign such a lease IF the lease is properly worded. It should contain two provisions which are omitted from too many leases.

First, I have seen leases which gave the company a year and a half or two years to drill the well and no rental was paid during that time. In other words, you tie your farm up for that length of time without any rent at all, and then if the company wants to

throw up the lease, they can do it and you have nothing. Six months should be ample time. In fact, I can see no reason why a company should not begin to pay rent immediately.

Second, scan the lease carefully to be certain that if gas or oil is struck, you get a royalty of $\frac{1}{8}$ of the proceeds. Frequently a lease will contain a provision that you get $\frac{1}{8}$ of the oil, but does not contain a similar clause regarding gas. Often the lease does give you a set sum for each producing well, but some leases contain the $\frac{1}{8}$ provision for gas, and we see no reason why it should be omitted from any lease.

* * *

Bad Accounts

Too many village merchants have recently been the victims of fraudulent or questionable collection agencies. We use the term "fraudulent" although most of them are operating just within the law.

Such agencies send men around the country contacting merchants in small towns and cities. Frequently they give the merchant the idea that they actually buy these old accounts for cash, which is not the case. The merchant signs a contract, sometimes paying an advance cash fee, and turns over to the agency a list of old accounts for collection.

The contract contains a clause by which the agency charges a listing fee for each claim regardless of whether or not it is collected. The merchant agrees to pay a commission on accounts that are paid to him direct. Briefly, the net result usually is that the collection agency keeps any money it is able to collect. When the merchant demands settlement, he often finds, that the "listing fee" plus the agency commission has eaten up all the money collected. If not, the collection agency claims that certain sums have been paid the merchant on which he has not paid them a commission. They may not say so in words but their attitude is, "go ahead and sue us."

We have had volumes of correspondence in trying to settle such disputes between agencies and merchants, and in no case have we been able to extract any money. The net result to the merchant is a lot of ill-will on the part of his old customers. The best remedy, in case you have already signed is to write to all debtors whose accounts the agency has, telling them under no circumstances to send any money to the agency.

* * *

In the July issue we asked for information as to the address of Mr. M. B. Hawes. We did this because we had written him a letter which the Post Office returned to us. The item brought Mr. Hawes' address. Also Mr. Hawes himself states that the note in the paper has resulted in some loss of business. This was the farthest from our intentions so we take this opportunity to state that insofar as we know our readers may deal with him with confidence.

* * *

Cows Stolen

During the summer cattle were stolen from eight farms near Gouverneur, St. Lawrence County. Through the good work of Sergeant H. Michael McCann and State Trooper Henry J. Meyn, two men were arrested, Raymond Taylor of Old Dekalb and Albert Gladle of Norfolk, and were charged with the theft of cattle from Albert Alverson and Walter Best. They are being held for action of the County Grand Jury on another charge of burglary in connection with the theft of maple syrup from the sugar house of Leland Young.

BOTH MR. & MRS. POWELL SUFFERED FRACTURES AND SKULL INJURIES WHEN THEIR AUTOMOBILE STRUCK A TREE.

Wentworth, N.H.

North American Accident Ins. Co.
Ithaca, New York

Dear Sirs:

We have just received from your agent W. O. Stark, \$260.00 in payment of our claims under our policies. We were in very bad shape from our accident and still are in misery.

Our expenses were tremendous so we certainly are very grateful to receive this help towards them.

You have been very considerate of us in requiring proof of claim and in every other way for which we are duly appreciative.

\$1.00 a year is very little to pay for insurance like this. You may use this letter in any way you see fit.

Yours very truly

Mr. and Mrs. E. H. Powell

A JOB WELL DONE ...AND ANOTHER JOB AHEAD

A New Laying Year Begins

JOHN HARSHAW looks forward to another successful year based on the three principles of good stock, careful management, and cooperation.

IT has often been said that the basis of success in the poultry business is good stock, good care, and good feed. How well this works is illustrated by the case of John R. Harshaw of North Fenton, New York.

Mr. Harshaw runs a combination dairy and poultry farm. He cooperates with the New York State College of Agriculture in keeping cost accounts. Here are some of his figures for 1938 (figures for 1939 not yet available):

	Harshaw's Farm	Average All Cost Account Farms
Number of birds	766	737
Eggs per hen	197	152
Average per bird		
Grain fed, lbs.	42	51
Mash fed, lbs.	43	41
Cost all feed	\$1.45	\$1.65
Total cost	\$2.95	\$3.36
Total returns	\$4.55	\$3.49
Per dozen eggs		
Cost	18c	26c
Value	27c	27c
Returns per hour of labor	\$1.78	39c
Mortality	11%	30%
Profit on enterprise	\$1226	\$98.00

Note the surprisingly low mortality and the high production per bird. Another striking feature is the low feed cost per bird which is reflected in the low total cost per dozen eggs. Mr. Harshaw's receipts per dozen eggs were the same as the average. His

high returns per hour of labor and his profit at the end of the year were entirely due to savings in the cost of production.

Mr. Harshaw buys White Leghorn chicks from a neighboring hatcheryman and rears his pullets on green range. His laying houses are light, clean, and roomy. His birds have received nothing but G.L.F. feed for the past 10 years, because John Harshaw is a firm believer in the cooperative plan of purchasing feed.

By using his own cooperative to do his feed buying for him, Mr. Harshaw knows that: (1) he gets the benefit of every advance in poultry feeding science; (2) he is assured of top quality ingredients and accurate mixing according to the formula shown on the tag; (3) savings made through volume purchases and cooperative distribution are returned to him either in the price of the mash or in patronage dividends.

Asked whether he would care to make a statement, Mr. Harshaw said, "I have used G.L.F. Super Laying Mash for 10 years—my cost account figures tell the rest of the story."

1 Harshaw cleans the laying house thoroughly. Dropping boards are cleaned and treated with Red Mite Killer. Walls are swept down and disinfected.

2 Old litter is removed; nests and feeders are thoroughly cleaned; the floor is swept and laid with new litter. Water cans are disinfected.

3 Old layers are culled very closely. Harshaw will carry over part of his flock.

4 A fresh lot of laying mash is ready for the birds. The final step is to drive down to the range at night and move the pullets in crates to the new quarters.

Bowls of paper white narcissi planted at ten day intervals will provide a succession of fragrant bloom during mid-winter weeks when they are most treasured.

LEFT —

For unrivaled interest in form and color we recommend the Amaryllis which is not too difficult for the average window gardener.

CIRCLE —

Philodendron with its beautiful heart-shaped leaves has a grace and beauty all its own.

LEFT —

Crassula, otherwise known as Jade plant or Japanese rubber plant, is very obliging as to requirements. It is especially at home in a modernistic setting.

WITH SUMMER'S flowers on the wane, we begin to think of indoor gardening and of the challenge which it presents to those who would be successful window gardeners. We have all heard some persons say that they have no "luck" with house plants, that they wish they had So-and-so's "knack" with them. Well, "green fingers" may be just a matter of thoroughly understanding our plant friends, of knowing that not all of them respond equally well to living-room environment; that some require direct sunlight, while others love shade; and that

some like a moist atmosphere and others thrive in dry air.

If you want to have an attractive and thriving window garden this fall and winter, first ask yourself these four questions:

1. How much sunshine may I rightfully expect on a winter's day?
2. How can I regulate air drafts and moisture with a definite fresh air bath at least once a day?
3. To what type of plants is my room best suited?
4. How can I arrange my plants so that they add to the decorative scheme of my rooms?

A south bay window is ideal for a window garden. If there is no bay window, then a span of windows is a good second best. Western, then eastern, exposures are next in desirability. We have been told for years that six hours of sunlight a day are needed for blooming plants, but the discovery that plants respond to electric light makes it possible for many more people to have blossoming plants than before this fact was (Turn to Page 2)

WINDOW GARDENS

(Continued
from Page 1)

known. Five or six additional hours under 75 to 100 watt bulbs make a big difference in the size and color of practically all blossoming house plants.

If there is no south window available, one facing north or east will take care of ferns, aspidistra, sansevieria and crassula. After canvassing the situation as to light, consider what artistic effects you can achieve with your plants. It is a good idea to make a rough sketch of the space in which the plants are to be fitted, remembering that the entire window frame, draperies, wall-paper, even the foreground of rug, all come into the picture. Glass shelves across the window, wall brackets at the sides, the pan or trough or shelf at the bottom, or the individual plant stand, are an important part of the composition. An interesting picture may be made of green plants alone, provided that they vary enough in shade and form. Blooming plants give accent to the composition and should be used as a center of interest. Vines soften harsh lines and add beauty by their gracefulness.

In the main, the same general rules which apply to making a good flower arrangement in a vase would apply to making an attractive window garden: Don't crowd; avoid crisscross lines; have a center of interest; have a plain background; remove plant material as soon as it becomes unsightly; lend variety by changing blooming plants according to season; remember that mirrors and hangings may be used to advantage behind plants on tables. Most plants, especially the flowering ones, have ugly duckling periods, and at such stages have no place in the picture which the indoor gardener tries to create. Move them to some other place where they can be nursed back to beauty once more.

Colorful pots have their part to play in the decorative scheme, especially when flowers are lacking. Yet in trying to get the traditional riot of color, be careful not to let the riot become a battle!

In choosing subjects for your window garden, don't forget the blossoming bulbs. These may well be paper white narcissi, planted at ten-day intervals, early flowering daffodils, lilies of the valley, white callas, amaryllis, oxalis or freesias. Each of these lasts for some days and will do much to enliven the mid-winter weeks. Tulips, also, may be forced but are more difficult under house conditions.

Among the blooming plants, I recommend the begonias, silverspot, scarlet, hanging, steel, perpetual and tuberous; the geraniums or pelargoniums in variety; Chinese primrose, gloxinia, patience plant, lantana, heliotrope, fuchsia, Christmas cactus and cyclamen. Of these, the everblooming begonias and the patience plant are probably the easiest for the amateur to manage.

Some begonias belong in the group of plants grown for their foliage, notably the Rex. In warm, shady spots in the house, near windows, soft foliage plants do well. Rex begonias, coleus and wandering jews belong on this list. However, they like a moist atmosphere. Plants which can stand dry air better than others are wandering jew, bracket plant, strawberry begonia, English ivy, palms, asparagus fern, rubber plant, dracaena, sansevieria

For Stay-at-Homes

By JOHN MAHER MURPHY.

A country road will carry you
As far as you'll be going.
Blue distance need not harry you:
It is no more worth knowing,
It is no more intensely blue
Than where the hazy crest
Of quiet road shows peeping through
A bit of sky at rest.

A country wall, a low stone wall,
As weathered as the hills,
Will keep out not an ounce at all
Of all the wealth that spills
At daybreak, daybright, dusk, and
night.

On such a wall close-curved
A man can have his fill of flight
And look around the world.

and aspidistra.

Everyone knows that house plants, as well as other plants, require food and water, but the trick is to give these requirements in proper amounts. A glazed pot is a safeguard against dry roots, though it is very easy to overwater when they are used. One way of providing needed moisture in the air and at the roots, besides avoiding the untidy look of a mongrel assortment of pots of all sizes and shapes in front of a window, is to have a metal trough or tray lined with peat or sphagnum moss or pebbles. The outside of the trough can be painted to harmonize with the surroundings.

Different house plants, of course, need different amounts of moisture. For example, African violets have to be kept rather moist and should always be watered from the bottom; while the old standby, the geranium, gets along very well with a moderate amount. The mistake most commonly made in watering house plants is to add frequently a little moisture to the top of the soil which never does soak down into the lower half of the pot. A thorough watering once a week is much better. It is entirely possible to water some plants too much, but there is relatively little actual danger if the pot has a hole in the bottom so that excess moisture can drain off.

To make satisfactory growth, plants need soil that is well supplied with plant food. If you have a fertile garden spot, well supplied with humus and where the soil is friable, there isn't much you need to do except to sift the soil before you put it in the flower pot. The standard recommendation for plant soil is equal parts of good loam, sand and well rotted manure.

As with all other gardening, half the fun of the indoor kind comes from experimenting, finding out how to improve, then trying again. Even if a start is made with just one plant on the window sill, it can be selected so that its size, shape and color make that window more pleasing to the eye.

"I understand they're going to attend one o' them diplomatic dinners, Annie!"

CROOKED

But "ON THE LEVEL"

Planting to Keep Soil and Moisture

Where They Will Do the Most Good

IF, ON YOUR travels in farm country, you see a crop with rows running in nice curves instead of straight as a die in the traditional fashion, do not hastily conclude that the hired man went to sleep planting it or that the boss is crazy. Chances are that the owner of that farm is convinced that one way to avoid watching rainfall run down the hill carrying valuable top soil with it is to plant crops in level rows

vines on Mr. Patterson's contour planted field are uniformly good and on the average made better growth than those on the adjoining field. On the latter field some of the plants on the lower portions where moisture drained from the higher parts are good, but

The picture at the right, taken on the farm of Schuyler Patterson, shows the growth made by grapevines planted on the contour to take full advantage of all rainfall.

The picture at the left shows a grapevine on the knoll of an adjoining field not planted on the contour. Lack of moisture has resulted in unsatisfactory growth.

on knolls there just was not sufficient moisture available to make good growth.

Mr. Patterson figures that little or no extra work will be required to care for the grapes planted on contour, and that is the way he is going to set them out from now on.

A few miles away from the Patterson place, on a rather steep slope, is the farm of William Wickham. This last spring Mr. Wickham set a new peach orchard on the contour. There has been no run-off and every inch of this summer's rainfall, small though it has been, has been kept there for the growth of the trees. Mr. Wickham is just as fully sold on the advantages of contour planting as is Mr. Patterson. Mr. Wickham grows peaches so that they begin to yield a crop when they are three years old.

We predict that erosion control is going to attract more attention in many hilly areas in the Northeast. It sounds logical and it has been tried by enough farmers to show that its merits are not mere theory.

Mr. Wickham and his granddaughter standing in his young peach orchard planted on the contour. There is no evidence of any run-off from this field and the trees have made exceptionally rapid growth in spite of the dry weather.

*"I plow 2 inches deeper...
USE 31% LESS FUEL
with high compression"*

*says M. L. Pace, of
Owego, N. Y., who
also filled 21 silos at
a cash profit last year*

"We would never return to the old low compression type of tractor," says Mr. Pace, shown here with his new high compression Massey-Harris 101.

IMAGINE PLOWING eight inches deep and using less than a gallon and a half of fuel per acre... filling silos with corn and using 1.2 gallons of fuel per hour!

That's the kind of performance O. L. Pace and Son of Owego, N. Y., are getting from their new high compression Massey-Harris 101 tractor, mounted on rubber and burning regular-grade gasoline. Compared with their former low compression tractor, designed to burn all fuels, this performance represents a 31% fuel saving in plowing, a 52% saving in silo filling.

Here's what M. L. Pace says: "To give an example of how the new tractor works, we plowed 15½ acres of loam ground about eight inches deep in 11 hours on 22 gallons of regular-grade gasoline. The old low compression tractor used 32 gallons for the same job and we plowed only 6 inches deep.

"Also, we do our own farming so much faster that we now have time to use our new tractor to bring in additional revenue from outside work. Dur-

ing silo filling time last fall, we filled 21 silos with corn. That cash income made the difference between profit and loss on our farm last year. In 145 hours of filling, besides many moves, the high compression tractor used 174 gallons of gasoline—about 1.2 gallons per hour. The old low compression tractor used 2½ gallons of fuel per hour for the same work."

You can do more work faster and save on fuel with a high compression tractor. Here's how most low compression tractors can be changed over to high compression: Install "altitude" pistons or a high compression cylinder head. Change the manifold setting or the manifold to the "cold" gasoline type and use "cold" type spark plugs. Use regular-grade gasoline (containing tetraethyl lead).

When you buy a new tractor, be sure the engine is of the high compression type designed to give you extra power and economy when using regular-grade gasoline. Ethyl Gasoline Corporation, Chrysler Building, New York, N. Y., manufacturer of anti-knock fluids used by oil companies to improve gasoline.

No Blackout of American Peace

SUPPOSE you were the mother or father of two or three little children, and in order to save their lives the government was forced to take them from you and distribute them in country homes, as in England, or in great tented camps as in France! That's exactly what is happening in England and France with millions of children from all of the very large cities.

Suppose you lived in London or Paris, and some night when all the lights were out you heard explosion after explosion, and rushing out you heard the groans and screams of innocent women and children killed in modern warfare! Or suppose you were the parents of boys of war age and saw them marching away, realizing that the chances were about equal that you would never see them again!

My father, both grandfathers, and several uncles were veterans of the Civil War. I grew up in the war tradition. As a small boy I remember well the hysteria that swept the country when the Spaniards sunk the "Maine" in Havana Harbor. I had friends in the minor war with the Philippines, and I remember all of the wild excitement when the World War broke out, all of the sizzling hatred for Germans as they attacked and sunk neutral ships loaded with innocent non-combatants. In particular, I remember the tremendous enthusiasm that swept the world and America when peace was declared. In New York City I saw the marching columns of enthusiastic boys before they went "over there", and I saw the hard-bitten men who came back.

So I know what war means, and I know, as all of my generation knows, that that last struggle, with all its cost in blood and money, gained absolutely nothing. We are still paying for it and will continue to pay for it for a hundred years to come.

But the trouble is that we of the older generation forget, and the new generation, moved by a sense of adventure and of ideals to save the world, is all ready to fight again.

From the beginning of this Republic, it has been our fundamental principle, and rightly so, to stay out of European affairs, to mind our own business. Let us continue to do so. Let us stand on the principles of America for Americans, of war to the last penny and to the last man only to defend America. Nothing else is worth the ghastly cost of war. Peace, next to liberty, is mankind's greatest blessing. Let us keep it.

Too Much Lifting

WITH all of the progress that has been made in the use of labor-saving machinery, comparatively little has been done to save the farmers from heavy lifting. That may not bother the young farmer, but the constant lifting of heavy fertilizer and feed sacks, barrels of produce, etc., is a positive menace to the health and happiness of men of fifty years and over. How they continue to stand it is beyond my understanding, and it excites my sympathy and admiration for their courage.

Many times I have suggested to fertilizer and feed manufacturers that it would be a blessing to farmers if they would invent some way to put their products in smaller packages. The chief hold-back on this is the increased cost.

Some farmers prevent much lifting by ingen-

ious use of hoists and by unloading feed on upper floors and using the force of gravity to get it to the stock without much carrying. In order to pass on suggestions to other readers, *American Agriculturist* will pay \$1 for any letter we can use received in the next few weeks, describing some way or ways by which you made your head save your back.

Taxes Multiplied Eight Times

AN OLD friend of mine, owning a small home in a village with a comparatively low valuation, told me the other day that when he bought this home, some forty odd years ago, the taxes on it were only \$6 a year. Last year they were \$50.

No better illustration can be found than this of one of the chief reasons why farmers are having such hard times. The hard times

of the 1890's were bad enough, but they were not as difficult as they are now, because farmers did not have to pay so many taxes and other expenses requiring so much cash.

One solution to the farmer's tax problem is a wider base of taxation, that doesn't put so much burden on real estate and more on other sources of income. Another fundamental solution is less government.

Famous Trees

THIS interesting old, harp-shaped tree, designated by Robert Ripley as "the greatest lyre" in the world, is growing in the Elm Grove section of Colrain, Massachusetts. It is well over

100 years old. Ninety-two years ago it was felled to make part of a brush fence, and instead of dying it started to grow in its present shape. Picture by courtesy of Mrs. Fannie E. Stafford, Shelburne Falls, Mass.

OUR PLATFORM

1. BETTER PRICES FOR FARM PRODUCTS.

3. A GOOD LIVING FOR EVERY FARM FAMILY.
4. MORE FUN ON THE FARM.

To Bring Back Burned-Out Pastures

SOME dairymen, looking at their burned-out pastures, may be so discouraged that they wonder what is the use of trying to do anything with them again. But grass is just about the most marvelous stuff that grows. Walk on it, tear it up, burn it out with hot sun and drought, it still comes back. So we may be sure that our burned-out pastures will show green again in the spring, or even before winter closes in. But of course grass will come back quicker and better with help.

Here are three good pasture rules recently given to me by a man who has made a lifetime study of grasses:

1. Take the cows off early, by the end of September if possible, so that the grass will have a chance to make some growth and build up its root system before winter.
2. So far as possible, keep the weeds out of it.
3. Use lime and superphosphate generously.

Those three rules will go a long way toward insuring your pasture for next year, and if you are to have good pastures then it is more than ordinarily necessary because of the drought to give some special attention to them.

This Used to Be Chestnut Time

I HAVE never got over my feeling of direct personal loss at this time of year, or a little later after the first frosts, for the chestnut trees that used to dot the woods, hills and pastures of this old Northeast country. What fun it was on a Saturday afternoon or Sunday to roam the hills in the mild Autumn sun to hunt for chestnuts. What a lot of romance went out of country life in the Northeast when the blight destroyed the trees.

Occasionally a report comes along that the chestnut is coming back, because scientists have found a blight resistant variety. Here's hoping!

Eastman's Chestnut

I AM INDEBTED to E. C. Moss of Trumansburg, New York, for the following story, which Mr. Moss said he first heard more than fifty years ago.

A tramp stopped at a farm house one evening just as the farmer and his family were eating supper.

"I hear you are overrun with rats, and I have come to your aid!"

"Yes", replied the farmer, "we have more rats than we need. What can you do about them?"

"Give me my supper", answered the tramp, "a place to sleep, and my breakfast, and I'll kill every rat on your farm."

To this the farmer quickly agreed, and after a hearty breakfast the next morning, the tramp said:

"Now I'm ready for business. Come with me."

Going out to the woodpile he selected a stout stick about three feet long, sat down by the chop block, and spitting on his hands, said:

"Now, bring on your rats!"

"We Love You Because YOU'RE MAINE - and HOME"

OH! they chew tobacco thin
Down in Maine! Down in Maine!
They chew tobacco thin
Down in Maine!
They chew tobacco thin
And it trickles down the chin
Down in Maine!

WHEN I was with a group visiting Maine farms and farmers recently, someone in the car I was in began singing that dignified little ditty which in turn set some of the Maine members of the party to telling Maine stories.

One of them was about one of those jolly, loveable Frenchmen, Acadians who settled along the St. Johns River in the northern part of Maine. A farm bureau man was attempting to tell this French farmer something about glacial action. Said he:

"These great big mountains of ice moved through this country, gouging out great valleys and hollows, and when they melted they left mountains of stones."

"By gar!" said the Frenchman. "It was one tam hot day when she crossed my farm!"

One of the mornings after we had started out to visit farms I noticed that David Agans, Master of the New Jersey State Grange, who was with the party, was very quiet and absent-minded. I finally got out of him what was the matter. He had called for two extra strips of bacon for his breakfast, and he had figured out that at the rate which he had to pay for that bacon, an average-sized hog would sell for about \$400. Dave said, and rightly, that that illustrated what made the hard times. Marketing and distribution of everything cost too much.

Four Kinds of Time

In Aroostook County I asked a farmer what time it was, and could not make his answer agree with either Standard time or Daylight time. He said: "It isn't supposed to. It's farmers' time, just halfway between, and that gives us three kinds of time." Somebody else spoke up and said: "No, you really have four: Standard Time, Daylight Saving Time, Farmers' Time, and a h—of a time keeping track of all the rest!"

In our last issue I tried to give you my impressions of Maine agriculture. This time I am trying to set down some reasons why I am enthusiastic over Maine folks and over the great contribution which they have made to America.

No understanding of Maine people can be had without knowing something of their history. It is interesting to know that all Maine, in fact all of New England and the middle states as far south as Virginia, was once claimed by the French under the general name of Acadia. And it is also interesting to speculate as to what this country would be like now if the French instead of the English had finally prevailed. In 1622, two years after the Pilgrims landed, Gorges and Mason obtained an indefinite grant of land (all those early boundaries were

indefinite) which included what is now Maine and New Hampshire. Gorges and Mason finally divided their territory, Gorges taking Maine and Mason taking New Hampshire. Later, Maine became part of Massachusetts and remained so until 1820, when she became an independent state of the Union.

"They Went Down to Sea"

While the importance of Maine farming should not be minimized, shipbuilding and lumbering have always been more important. Since earliest times Maine has been famous for its shipping interests, and its tall pine trees have always sailed the seven seas. Many were the sons of Maine who "went down to the sea in ships!"

At one time Maine led the entire world in lumber production. In 1830 she led all the states of this nation,

Longfellow in "The Courtship of Myles Standish", shared an office in 1634 with John Holland, who was in command of the post. It was up this same Kennebec River that Benedict Arnold in 1775 led his little army, composed of Maine and other New England boys, against the British at Quebec. If you want to read a great story founded on facts, read "Arundel", by Kenneth Roberts, a famous author now a resident of Maine.

They Sleep Side by Side

Some years ago I had a little time to spare in the city of Portland, Maine, and wandered into the old home of Henry Wadsworth Longfellow, now carefully preserved in much the same condition as it was when the poet lived there. From there I walked down to where I could see the great sea roll-

**SOMEWHERE IN MAINE IN JANUARY.

"But if this is your barnyard, where in blazes is the train tracks?"

and that this industry is still a tremendous one is shown by the fact that in 1930 the state cut nearly 111 million board feet of white pine, and produced 13½ million board feet of birch and hardwoods. As editor of a farm paper using large quantities of paper stock, I was very much impressed on this trip with the tremendous amount of pulp wood in the rivers. Having had too much acquaintance with the bucksaw when I was a boy, it made my back ache just to look at some of the great piles of cordwood containing many hundreds of cords. In 1930, Maine had 36 mills to grind wood pulp, which consumed 1,200,000 cords.

But back of all the cold dates and facts related by the history books, there are always the men and women who made that history, and much more that never got into the history books. The sons and daughters of Maine have always played more than their part in the building of America. They suffered during the old French and Indian wars, they fought and sacrificed valiantly during the Revolution, and in the War of 1812, in particular, Maine suffered grievously. During the War of 1812, raid upon raid was made by the English men-of-war upon the cities on the Maine coast. Several of these were taken, and held by the British, and Falmouth, now Portland, was bombarded and burned. It was at Fort Western on the Kennebec River that John Alden, immortalized by

ing in, and thought of the battle that Longfellow witnessed as a small boy. This was the engagement between the Enterprise and Boxer in the War of 1812 off the harbor of Portland, in which both captains were slain. They were buried side by side in the cemetery on Mountjoy. Both this battle and Deerings Woods, where Longfellow played in boyhood, are vividly described in his poem "My Lost Youth", from which I quote two verses:

"I remember the sea-fight far away,
How it thundered o'er the tide!
And the dead captains, as they lay
In their graves, o'erlooking the tranquil bay,
Where they in battle died.
And the sound of that mournful song
Goes through me with a thrill:
'A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts.'"

"And Deering's Woods are fresh and fair,
And with joy that is almost pain
My heart goes back to, wander there,
And among the dreams of the days that were,
I find my lost youth again.
And the strange and beautiful song,
The groves are repeating it still:
'A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts.'"

The Old Squire's Farm Was in Maine

Speaking of writers, Maine has contributed her full share. Old-timers will recall a writer by the name of Browne, a Maine humorist who wrote under the name of Artemus Ward. Browne was a great favorite and friend of Abraham

Lincoln. Still remembered, also, are the fine home stories by Holman Day, a Maine writer who for many years contributed to the good old Youth's Companion. *American Agriculturist* is now reviving and printing for another generation of readers the stories of C. A. Stephens, who for many years entertained and instructed boys and girls of America through the columns of the Youth's Companion, with his stories of the Old Squire's Farm down in Maine. Mr. Stephens lived in Norway, Maine, where his widow still resides.

A present-day Maine author is Robert P. Tristram Coffin. His Commencement Address at the University of Maine, entitled "Maine: A State of Grace", is a beautiful tribute to the old state which every lover of New England ought to read.

Of course, it is impossible here even to list the writers, statesmen and other leaders who have made Maine famous. No one can compile such a list anyway, because no one knows the names of the great rank and file of Maine and other New England folks who were great because they met the tests and responsibilities of everyday life, enabling their sons and daughters to go forth from their homes and leave their mark on the life of almost every American community.

In company with Dean Deering and Wilfred W. Porter, fellow-directors of the Farm Credit Administration for the Northeast, I climbed onto an airplane on the conclusion of our automobile trip at Caribou, Maine, and flew almost the entire length of the State to Boston. At the beginning of our airplane trip we could see the beautiful productive farms of Aroostook County stretching to the distant horizon, with hundreds of potato fields, bordered by the lighter green of the clover, and golden fields of thousands of acres of oats ripening in the August sun. Shortly after starting, to our right loomed Maine's highest mountain, Katahdin, according to the encyclopedia 5,200 feet high—according to a Maine friend, 5,262.6½ feet high—take your choice! Anyway, it is so high that one can travel along for a great distance and still keep it in sight, and Maine folks are so proud of it that they have named a variety of their potatoes after it.

Where Paul Bunyan Got His Start

As we continued south we began to cross the wild Maine woods, thousands of acres of them, the "black woods" as they are often called because of the preponderance of evergreens, giving Maine its nickname of "The Pine Tree State". Set like diamonds in these black woods are hundreds of small lakes, which made me think of Paul Bunyan stories. You will recall that Paul Bunyan got his start as a woodsman in Maine. His great Blue Ox made such big holes in the soil with his huge feet that when the holes filled up with water they made Maine "the land of lakes". Paul later took his Blue Ox west, where they cleared and logged off North and South Dakota in one winter! Paul was quite a boy!

Vacationland

Maine is, indeed, as the license plates on the automobiles advertise, "A vacation land", where lakes, woods, fish

**A friend writes that Maine is not as far North as I said in my last article. All right—my mistake. I'll admit that there is a week or so of bare ground in July.

Remember last winter?
Enjoy Happy Heating
next winter!

Before the fall rush starts, take care of your winter heating requirements. You can now enjoy the warmth, comfort and convenience of a **UTICA HEATING SYSTEM** for as little as \$10 per month.

FIRST PAYMENT NEXT JANUARY

No down payment is required—the first payment is in January—and you have as long as three years to pay. **UTICA HEATING SYSTEMS** are economical both in first cost and in the amount of fuel they use. They will assure you complete heating comfort.

STEAM or HOT WATER Burn Coal, Oil or Wood

You can secure any type of heating system you desire . . . and a **UTICA HEATING SYSTEM** is just as efficient with any type fuel and is especially adapted for using the cheaper grades of coal.

Authorized Dealers EVERYWHERE

UTICA dealers are skilled heating men and they will gladly make an analysis of your heating conditions to determine the best type of heating system for your particular home. **Your present heating system is not disturbed and you are not left without heat during installation.**

All **UTICA HEATING EQUIPMENT** is backed by a **Guarantee Bond**. Don't miss this opportunity to investigate. Without obligation, you may learn how reasonably a new Utica Heating System can be purchased on terms to suit your convenience.

CHARLES M. GARDNER

Editor of the National Grange
 Monthly and High Priest of De-
 meter of the National Grange.

FEW FARMERS yet realize the value to their industry of the new legislation passed in the closing days of Congress, to protect them against fraud and deception in the purchase of seeds. This is the Coffee Bill, which requires the labeling of seeds shipped in inter-state commerce, with a statement as to their germinating qualities, their weed seed content, and the kinds and amounts of weed seeds present; together with the state or country of origin and with effective penalties against false labeling and advertising of seed, as well as the importation and shipment of seed containing noxious weed seeds detrimental to agriculture.

One of the strongest influences in securing the passage of the Coffee Bill was the National Grange, which for years has conducted a persistent campaign to insure the quality of farm seeds. This is in line with similar Grange effort in behalf of pure food and drug laws, the labeling of contents of fertilizer, patent medicines, etc.—all designed to protect the public against deception and fraud. Likewise the Grange has been fighting for years for a truth-in-fabrics law, and is now heartily backing the Schwartz-Martin Bill, which passed the Senate by a vote of two to one and remains on

the House calendar. The latter is aimed at preventing shoddy deception in the manufacturing of clothing.

THREE GRANGES, Northwood, Mountain Laurel and Bow Lake, in New Hampshire recently combined in a novel event. A three-course "progressive" supper was served, one each in turn at the respective Grange halls, but with sufficient time and distance in between so that the Patrons were just as hungry at the second and the third stop as they were at the first. The amount of food consumed was beyond estimate, but hardly to be compared with the sociability and fun which the plan supplied.

CATTARAUGUS COUNTY, N. Y. patrons have been greatly interested in the journey of the "Little House", a very unique project typifying home and country life, which has just completed a tour of all the subordinate units in the county and returned to the Delevan Grange hall, from which it started out five months before. A delegation from Freedom Grange carried the "Little House" back to the Delevan hall and a great rally meeting was the accompanying event.

IT WILL BE difficult to find many

Grange families in the United States boasting three 1939 masters within their circle, but Connecticut presents such a case. In the town of Morris, Sherman K. Ives is master of Mountain County Pomona, No. 4; his wife is master of Morris Grange, No. 119; the oldest son, Alden, is master of Morris Juvenile, No. 32. Furthermore, Mr. Ives is overseer of the Connecticut State Grange; Mrs. Ives is secretary of

(Continued on Page 14)

"We Love You Because You're Maine"

(Continued from Page 5)

and game abound. One farmer told me, however, that it was the outsiders that got the vacations—Maine farmers are too hard put to make a living! Nevertheless, the vacationists bring a lot of much needed money into the state, and the Fish and Game Commissioner, Mr. George Stobie, and State government are to be commended for the good conservation job they have done.

As we passed a little to the west of the State Capital, Augusta, I could see the State House in the distance, and then finally, to our left out of the haze came the shore and the sea, while to our right low in the west gleamed the afternoon sun. As night came up from the horizon on every side, we followed the "stern and rock-bound coast" until the twinkling lights marked the crooked streets of the Yankees' great-city, Boston.

My friend and associate, Mr. Gordon Thomas, New England Manager of *American Agriculturist*, wrote me after this trip and sent me a poem describing his own feelings when he flew recently from Portland to Boston. Here it is:

"We drone through wideness, while the afterglow
 Of late sun splendor fades at evening's rim.
 Against the East, the sea, remote and dim,
 Is gathered into shadow. Far below
 A world fills up with dusk. Dark rivers flow
 As effortlessly over earth's vast brim,
 Man's fragile towns, and all things built by him,
 As tide floods some low marsh where thin reeds grow.

"When we exchange this interval of flight,
 This space, for narrow walls, we shall have known
 Such peace as comes to those who, at the sight
 Of mountains shining in a distant zone,
 Speed with a hum of wings across the night,
 As toward some high-towered Camelot, alone."

Anyone who has the privilege that I had of spending several days among Maine folks, ending with a bird's eye view from the clouds of their great state, would have to be totally without appreciation not to be almost as enthusiastic as a State of Maine man himself. By gorry, he would!

I close this little piece with another verse, which might well be called Maine's theme song. It was written by Lester Melcher Hart and set down for me by Dean Deering from memory in the plane while we were "somewhere over Maine":

You're just a rugged, homespun state
 Perched on the nation's edge,
 A stretch of woods, of fields and lakes,
 Of ocean pounded ledge.
 But rugged deeds and rugged men
 You've nurtured for your own:
 Much good the world has harvested
 From broadcast seeds you've sown.
 And so, we love you, rugged state,
 We love your smiling skies,
 We love you for your deep-piled snows,
 Your jagged coast we prize.
 We love you for the lofty seat
 You've reared 'neath Heaven's dome:
 But best of all, we love you, Maine,
 Because you're Maine—and Home!

"Hello, Wasson hardware? Send a box of .32 shells to the Smith grocery—and HURRY with them too!"

FREE CARTONS to Producers on the Layena Egg Plan!

THERE'S A WAY that you can get top prices for your eggs all year round. It's the Layena Egg Producing and Selling Plan. Not only does this plan enable you to produce eggs of the finest quality, but it helps you sell them for top prices.

When you put your hens on the Layena Plan, your Purina dealer will furnish you without charge with beautiful Checkerboard cartons. By packing your eggs in these cartons, you immediately identify them as Layena eggs, which are known throughout the East as market eggs of the highest quality.

In addition, your Purina dealer will furnish you without charge a rubber stamp bearing your name so that you can personalize each carton, a book entitled "49 Ways to Sell Eggs for More Money," an attractive fiber road sign. Also other sales helps, at actual cost.

On every Layena carton is printed a money-back guarantee, assuring the customer that Layena eggs are uniform in yolk color and of the highest quality in every respect. This guarantee is backed by Purina Mills. It gives you an added selling point on your eggs

that will help you get top prices for them.

Stop in and see your Purina dealer. Let him tell you more about the Layena Egg Producing and Selling Plan!

LAYENA EGGS are on the Air!

The Purina radio program, "Checkerboard Time," on the air over more than 20 outstanding stations in the East, is constantly telling housewives about the fine quality of Layena eggs. This helps you get and hold a ready market for your eggs. Listen for "Checkerboard Time" over the following stations:

PART III—SHALL WE SURRENDER TO "ISMS"?

IN previous columns I wrote of our adventures in the Balkans and our escape from Albania. When we finally arrived home to our own Fair America, a prayer of thanksgiving went up from our hearts. We left behind tottering Europe, shaken by threatening clouds of war.

On our ship were many immigrants who were to see America for the first time. Husbands and wives embraced each other as we neared the land of Opportunity and Freedom. When our daughter landed in America recently she told us that some foreigners even got down on hands and knees and kissed the ground. In America, with their families safely about them, they can live and work, unrestrained and uninterrupted by the threats of war.

The events of those weeks in the Balkans pass before my eyes in quick succession. I still picture Prime Minister Chamberlain on an Easter week-end holiday; King Zog anxiously at the bedside of Queen Geraldine and their day-old son; long processions of Pilgrims winding their way to sacred shrines or stopping for prayer and meditation through those long three hours of remembrance of Christ's suffering on the cross on this Good Friday. On this day, of all days, for Italy to pounce down on poor little helpless Albania!

Is the world to be dominated by force? Everywhere about us we see the cross-currents which are forming today's alliances. Does any Power really want Communistic Russia as a bedfellow? Hitler hates Communism, hates the Jews, hates the Church. Italians don't like Germans and, desiring a peaceful Mediterranean, don't want to fight England, which would probably mean the destruction of Rome, Naples, Florence, and priceless treasures, to say nothing of the sacrifice of countless lives. The Balkans—Rumania, Bulgaria, Turkey, Greece, Yugoslavia—with recollections of the World War, fear to take either side. We realize the mess Europe is in when people fear to talk in the lowest whispers.

I didn't meet a single person on my whole trip who wanted war. Everyone passionately wanted peace. And peace we can have, provided we bend our every thought, yes every dream, to Peace.

We all hold our personal opinions of the men in power today. After all, some type of ability put each man in his place to meet the problems peculiar to his people. The personality and achievements of Mussolini command respect. He has gotten rid of beggars and cleaned up Italy. May he not be drunk with power to become another Caesar. May service to his people be his highest aim!

When we think of the injustice of the Versailles Treaty and the hopelessness of the German people, surely a Hitler was needed. But may the thirst of power not so craze his mind that he will lose all sense of righteousness.

The world is sick. In personal and community and national and international affairs, the doctor it needs is One who will not only cure physical ills, but lift all humanity to a great brotherhood. These are testing days when we as individuals need to be much in prayer that we may measure up to our responsibilities.

Milk Prices Advance in Rochester Milk Shed

ANOTHER victory for orderly marketing of milk is seen in the price increase in the Rochester market and the probability that another increase will go into effect shortly. As a result of action by all groups of dairy-men, the Rochester Milk Producers' Cooperative Bargaining Agency announced that Class 1 price had been increased 47 cents per 100 pounds and fluid cream 40 cents per 100 pounds as of Sept. 1. Previously the Class 1 price had been \$1.90 and the cream price \$1.20. Prospect is that another increase of one cent a quart will be effected during the month.

United action came on the heels of a call to organize an independent bargaining agency. Rumors flew thick

the bargaining agency, denied that the bargaining agency had bogged down and said the real issue was that some of the minority groups were trying to block equalization. From his sick bed in a hospital Levi A. Higley of Elba, president of the independents, urged them to cooperate. At the last moment the meeting to form an independent agency was called off and the following night all groups met at the Rochester Bargaining Agency.

Consumers Go Along

After it was all over, and after the price increases had been passed on to consumers, with the intimation that there would be another one, there was no protest by consumers. Their attitude seems to be that they were satisfied if the money was to go to farmers. Some expressions were that in view of drought and other factors they thought farmers were entitled to more money.

Milk Marketing Agreement for Chicago

A Federal Order regulating the handling of milk in the Chicago, Ill., area became effective September 1. About 15,700 dairy farmers ship milk to that area, and preliminary reports on the referendum show that 11,960 votes were cast, 11,261 (about 94 per cent) being in favor of the Order.

The Order was signed by the Secretary and approved by the President, and is binding on about 200 handlers distributing milk in that area. The Administrator of the Order is N. J. Cladakis of Washington, who has been Marketing Specialist with the Agricultural Adjustment Administration for six years.

and fast. One report was that if a milk strike was called the American Federation of Labor would call out milk wagon drivers. Another was that one dissatisfied party was negotiating with the CIO.

Unity Prevails

Last spring and early summer retail milk prices dropped two cents a quart and the drop was passed back to farmers. Steps were taken to form a bargaining agency and to obtain a milk marketing order. Representatives of practically all of the cooperatives supplying the market agreed to form a bargaining agency. There are about 1,800 producers in the milkshed. Of these about 350 independents belonged to no marketing organization. It was decided at a meeting of independents to organize the Rochester Independent Milk Producers' Association, to be represented in the bargaining agency.

At meetings of the independents, considerable sentiment was expressed for united action. However, independents were slow to sign contracts with their organization and the bargaining agency had many problems to solve.

Drought and continuing low prices prompted one faction to talk strike. A call for the meeting to form the independent agency was issued and hot words were uttered. One charge was that the Dairymen's League was blocking a move to obtain an increase from dealers September 1. This was refuted by League officials, who said they merely wished to be protected against raids on the market. They contended that if all of the groups would act together the price increase could be obtained.

Harvey Way, president of the Community Cooperative and chairman of

At the present writing it appears that the united action by the producers has had salutary effect. It appears to have demonstrated to them that by working together they can achieve their aims. An application is being written for a state order.

* * *

Institute Moves

The New York and New England Apple Institute has moved its main office from Poughkeepsie to New York, where it is located in the Herald-Tribune building. A branch office also is being opened in Boston. Ever since the institute was started five years ago it has operated from Poughkeepsie, but need of being located nearer the trade promoted the moving.

Tom O'Neill, institute manager, has been so busy on the road that he spent only one day at the State Fair this year. "We are glad to have an exhibit wherever we can," said Tom, "but this year we are spending a minimum of personal effort on these and concentrating all of our time and energy on trade channels."

* * *

Drought Retards Peaches

Cumulative effect of drought has been more apparent recently in Western New York, one result being that what looked like a large crop of peaches a few weeks ago has been "standing still," as one well posted grower put it.

Early peaches came through pretty well and some of the newer varieties brought good prices. Among these

the Golden Jubilee enjoyed a quick turnover, with the demand strong right up to the last. This is a New Jersey peach. It is ideal for local markets, but does not ship too well and has the further liability of freezing occasionally in a severe winter. Veteran, a Canadian peach from Vineland, has the old Crawford taste and is said to bear well, in contrast to the Crawford.

The fine quality of the early peaches appears to have given consumers a taste for the fruit, so that there are hopes the late crop may move well. One thing is sure, and that is that unless there is rain it will be a smaller crop than estimated earlier. Frank Beneway, chairman of the growers' state peach committee, reports that both chain and independent store groups are doing considerable promotion to help the peach movement.

Conference Board Re-elects Officers

At a recent meeting of the New York State Conference Board of Farm Organizations at Syracuse, Fred Sexauer of Auburn, President of the Dairymen's League, was re-elected Chairman. Also re-elected were: Herbert King of Trumansburg, President of the State Farm Bureau Federation, as Vice-Chairman; and Edward Foster of Ithaca, as Secretary-Treasurer.

At the meeting a committee was appointed to draft a legislative program to be considered when the Conference Board has its next meeting at Ithaca in December.

Harrison of Rensselaer Wins Horseshoe Title

ON AUGUST 29 and 30 at State Fair, Syracuse, 34 county horseshoe champions fought it out for the state championship. This is the 15th year that this contest has been conducted by the Farm Bureaus of the state and *American Agriculturist*.

The winner was Harry Harrison of Rensselaer County. Harry is 21 years old, has pitched horseshoes since he was 10 years old, and has represented Rensselaer County for the two previous years. This year he came through by winning all his games in the finals, making 250 points to 151 points for his opponent. Out of 324 shoes pitched, he made 185 ringers and 55 double ringers. Ringer per cent was .571.

Harry received a gold medal awarded each year by *American Agriculturist*, and \$50 in prize money given by the State Fair. Other prizes given by the Fair were: 2nd—\$40, 3rd—\$30, 4th—\$20, 5th—\$10, 6th—\$5, and 7th—\$5.

The game between Harry and Mike Belsky of Queens County, winner of second place, was an unusually long one because time after time both Harry and Mike would throw double ringers for no score. Mike, however, lost one other game in the finals and so tied with Lewis Thompson of Onondaga County for second and third. In the pitch-off Belsky won.

Clarence Baker of Chautauqua County, who has pitched in several previous contests, won fourth; and Charles Secord of Westchester County and Joe Kellner of Orange County tied for fifth and sixth, with Secord winning the pitch-off. Seventh place went to A. Holzhauer of Schenectady County who finished seventh in the round robin.

The winners of the Farm Bureau-American Agriculturist Horseshoe Pitching Tournament at the State Fair. In the front row, left to right, are: Dr. H. H. Turner, manager of the Tournament; Harry Harrison, Mike Belsky, Lewis Thompson and Clarence Baker. Back row, left to right: Charles Secord, Joe Kellner, A. Holzhauer and Edward McGuire, Auburn, official referee.

As usual, the contest started off with a qualifying round in which each contestant pitched fifty shoes. The result was the highest number of points made in any qualifying round in any tournament yet held at the Fair Grounds. Charles Secord was high in the elimination round with 108 points.

Interest in the tournament was increased by the presence of two ladies—Miss Ruth Allen of Nassau County and Mrs. Marian Warner of Broome County. The crowd was rooting for

them, but due to the exceptionally stiff competition neither of them qualified for the 16 player round robin.

An added feature of the tournament was an exhibition game pitched in front of the Grandstand Wednesday afternoon. Contestants were Miss Allen and Jimmy McGuire of Auburn. The exhibition was received with enthusiasm and should result in a few more enthusiasts for the game.

As usual, the contest was well managed by Dr. Harry Turner of Syracuse, with Ed McGuire of Auburn acting as official referee. Mrs. Turner assisted in keeping the records.

Contestants who were unsuccessful in surviving the elimination were: Stephen Babick, Broome County; Glenn Wallace, Cattaraugus; James McGuire, Cayuga; James Miller, Chemung; Dorman Clapper, Chenango; Robert Van Valkenburgh, Greene; Leonard Ackerman, Lewis; Paige Trew, Madison; Miss Ruth Allen, Nassau; Elmer Zoss, Niagara; Gordon Brown, Ontario; Edgar Wells, Orleans; Claude Armlin, Schoharie; Herbert Hitchcock, Schuyler; Willard Smith, Steuben; Robert Crary, Sullivan; Donald McCloud, Wayne; Lewis Patridge, Wyoming.

On this page are tables showing the results of the 16 man round robin, the 6 man finals, and the pitch-offs to decide the ties.

RESULTS OF ROUND ROBIN

Num- ber	Name	County	Games Won	Lost	Ring- ers	Double Rngs.	Shoes Pch.	Per Cent Ringers

A NEW MENACE *over Every Dairy Home!*

"THE MOST TRAGIC AND DEPLORABLE THING THAT HAS EVER HAPPENED IN THIS MILK SHED IS THE COMING OF THE C. I. O." a dairy farmer said the other day. And this same statement is being voiced by thousands of other farmers all over the milk shed.

Yes, the C. I. O. is here. It has left the brand of its tactics on many of our dairy farms—tactics which have been a shock to our peace loving farmers. **POISON BRAN LEFT IN PASTURES—WIRE FENCES CUT OR PULLED DOWN WITH TRUCKS—FARMERS AND THEIR FAMILIES THREATENED—KEROSENE PUT IN MILK AND WELLS. VIOLENCE—VIOLENCE—VIOLENCE,** from the time the C. I. O. started the sit-down strikes. All this happened after farmers had approved and established a peaceful and a sound method of adjusting milk prices.

What dairy farmer would like to have C. I. O. guards at the door of his barn telling him he couldn't milk his cows. What dairy farmer would like to have them tell him what he shall pay his help. These things happened in California. What dairy farmer wants a **SIT-DOWN STRIKE** on his farm.

These things may come. Already the C. I. O. are claiming they have won benefits for the farmers with the milk strike.

But here's a very hopeful sign. Dairy farmers are already asking: "Did the C. I. O. effort really gain anything for the dairy farmer?"

"Is this C. I. O. method a sound substitute for the State-Federal Order?"

"Hasn't the C. I. O. really helped the milk dealers further divide farmers and really put off United Farmer action?"

"Hasn't the C. I. O. caused dairy farmers to lose much of the great gains we have made during the past three years?"

If farmers are ever to unite on *anything*, let it be this—

WE WILL KEEP OUR INDEPENDENCE—WE INTEND TO RUN OUR OWN FARMS—WE WILL CONTROL THE MARKETING OF OUR MILK THROUGH THE MEANS PROVIDED BY STATE AND FEDERAL LAWS—WE WILL NOT LET THE C. I. O. RUN OUR FARMS OR DOMINATE OUR INDUSTRY.

Published by

THE THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

Potato Growers in No Hurry to Sell

HERE are some facts for potato growers to keep in mind in determining their potato marketing program.

First, the Bureau of Agricultural Economics in Washington report recent seasonal declines in prices, but many of the best informed growers believe the trend of potato prices from now on will be up. The states that grow the intermediate potato crop, most of which is marketed fairly early, grew 10,000,000 bushels less than a year ago and about 8,000,000 less than the ten-year average. That situation is mainly responsible for better potato prices than were secured a year ago.

The second fact is that the late crop is also going to be shorter than a year ago. It is practically certain that the supply of late potatoes will be 3,000,000 bushels less than last year and 16,000,000 bushels less than the ten-year average, and there are those who believe that the late crop will be even smaller.

The third fact is that there is a war in Europe, and no one seems willing to predict just what effect that will have on our general price level. The chances are that if all prices do go up, potatoes will be affected less than some non-perishable crops such as grains. That, of course, is just a guess.

In order to find what farmers think about the situation, we asked for reports from a number of them. Vincent Canham, our Maine correspondent, writes that growers have begun digging potatoes in Aroostook County and that one or two carloads had been shipped by September 1. The price growers received was \$1 a barrel (2½ bu. or 165 lbs.).

As most of you know, the Maine crop is good this year. They have had abundant moisture, and the last crop report estimated the yield at 49,300,000 bushels, as compared with last year's crop of 39,600,000 bushels and a ten-year average of 44,968,000. Of course, later reports may show a drop in the estimate, but unless blight becomes very serious, the crop harvested will certainly be way above last year's.

Harold Evans (known to all of his friends as "Red"), who is Secretary of the New York Cooperative Seed Potato Association, says:

"The bulk of the New York State crop of potatoes will undoubtedly be disappointing to many potato growers. This fact, together with recent reports from Maine which indicate that the estimate from that section will be materially reduced before digging is completed, would indicate that there would not be too many potatoes and that the market should be healthy all winter. The farmer who has good storage facilities will undoubtedly find this a good year to house them. People who study the potato business seem to think that we can expect an increasing price as winter advances."

In New Jersey growers are holding off on marketing their crop, and Amos Kirby of Mullica Hill reports that fewer potatoes had been dug up to the first week in September than at any similar date in history. He estimates that 40 per cent of the New Jersey crop was out of the ground on Labor Day, whereas commonly from 60 to 90 per cent of New Jersey potatoes are dug by that date. The prevailing price is \$1.00 to \$1.10 a 100-lb. sack. If the price should go up to \$1.25, New Jersey potatoes would be sent to market considerably faster.

Many New Jersey growers feel that they can make money by holding potatoes, but few growers have storage space that will keep potatoes after severe weather sets in.

C. E. Moore of Daretown, N. J., says that not over 10 to 15 per cent of the crop in that area has been harvested. Yields are poor, with 75 sacks per acre about tops.

Alfred Sloan of Shirley, N. J., believes that about ½ of the potatoes in that area have been dug, with yields ranging from 50 to 60 per cent of last year.

Russell Probasco of Allenton, N. J., says:

"Potato harvesting has been at a standstill, and growers are digging only one or two days a week. If prices do not advance, they will hold part of the crop for fall marketing."

Mr. Probasco has space for storing about 7,000 sacks.

Staats Stillwell of Freehold, N. J., says:

"Dry weather caused heavy reduction in the crop. Acreage is between 25 and 30 per cent dug, with some growers finished and others just started. Digging will have to be speeded up during the next few weeks."

Around Cranbury, N. J., the bulk of the crop has been harvested, while in the vicinity of Dutch Neck digging will continue for another two or three weeks. The estimate is that the crop there is about ¾ harvested.

Roy Porter of Elba, N. Y., President of the Empire State Potato Club, says: "The light production of potatoes in New Jersey, Long Island and other early districts, has created a supply situation justifying higher prices than prevail at present. The latest developments in Maine indicate a decided reduction from earlier estimates, thus removing the threat of surplus which has been bearing down the market. The best Maine authorities now predict a crop of between 42,000,000 and 45,000,000 bushels, or from 5,000,000 to 8,000,000 less than was forecast earlier."

"Dry weather, general through late producing areas, promises average light yield. The present undercurrent indicates better prices and happier days for potato growers."

Orange County, N. Y., Expects Big Onion Crop

Orange County, N. Y., expects one of the largest onion crops on record, with an average of nearly 400 bushels from 6,700 acres planted this year, or approximately 2,680,000 bushels. This is in marked contrast with the tragic history of 1938, when nearly the entire black dirt area of the county was flooded as the result of the continuous rains in late July and August, with the crop badly hit in the fields.

"With a price averaging seventy cents a hundred, even this year's good crop, however, is not going to aid many of the farmers who were forced in debt by last year's disaster," said Wheeler Jessup, who has about seventy acres operated on shares in the Florida area. Mr. Jessup reports an average yield of about 500 bushels to the acre this year, the sowed onions having done better than those grown from sets.

He plans to sell a good part of his crop immediately, even though the price is low, as he has not had any too good luck in past years in storing. He says, however, that he may store more this year as he expects higher prices later on, particularly if the European war continues.

"We have nearly a record crop," reports Joseph Wiececk, one of Orange County's largest growers, who had approximately 100 acres in onions this year. "We expect to average 800 bushels to the acre from our 100 acres, which will give me 80,000 bushels to sell. I plan to store about thirty per cent of the crop and would store more if I had the facilities."

"The crop is of excellent quality this year, as onions always do better in a dry year than a wet one. There was

little or none of the root rot which did us so much damage last year and the year before—a disease which flourishes in wet weather—although there was considerable mildew. The large onions seem to be the ones most damaged, while the bulk of the crop is of excellent quality—well grown out and firm. I think they will keep very well this year."

Cabbage Crop Light

Charles Wilson of Hall, Ontario County, N. Y., says: "Around here the cabbage crop appears to be much smaller than a year ago—in my opinion, less than half. The dry weather and thrips, worms and aphids caused heavy losses during the growing period. Consequently, the market outlook is much better than a year ago."

"In the years of my experience, I have tried to find an answer to the question 'Should I hold or sell early?' I have missed it as many times as I have guessed right, and now I am content to follow the plan, so far as I am equipped to do so, of distributing the sales over the entire market season,

and also I like to 'begin to sell on the rising market."

Art Estey of Tully, Onondaga County, N. Y., reports that the acreage of cabbage in that section is 80 per cent of the five-year average and that the crop is about 25 per cent of normal for this time of year.

J. L. Salisbury of Phelps, Ontario County, N. Y., states that the Domestic cabbage acreage is short and the crop light due to dry weather. Many fields, he states, will not be worth cutting if they do not get rain soon. Some cabbage has been sold in that area at prices of from \$15 to \$35 a ton. The kraut factory started operation September 6 at \$15 a ton.

Shipments of apples are reported light, although due to increased truck shipments it is difficult to get an accurate estimate.

Recent quotations at New York City were \$.75 to \$1.00 for New Jersey 2¾" to 3" Wealthies. Fancy McIntosh brought \$1.12 to \$1.25 for 2½" to 2¾", and a few from the Hudson Valley brought as high as \$1.50.

The Causes of Milk Strikes

By LELAND SPENCER.

THE *American Agriculturist* dealt so thoroughly with the milk strike in the last issue that I feel no obligation to fulfill my promise to discuss it in these columns. There is, how-

Leland Spencer

ever, something I might add with reference to the causes of milk strikes.

It is a fact that New York farmers have participated in strikes only when they became desperate. And usually the feeling of desperation among our dairy farmers has come to the point of boiling over only when their incomes were entirely too small to pay expenses and maintain even a minimum standard of living. This is shown conclusively by a comparison of the prices that New York farmers have received for milk and the prices paid for sup-

INDEX OF RETAIL PRICES FOR THE THINGS FARMERS BUY, FOR THREE MONTHS OR LONGER, THERE WAS A SERIOUS MILK STRIKE. It will pay the dealers, milk control authorities, and all of us to watch these price relationships in the future, and to make every possible effort to prevent a recurrence of conditions that drive dairymen into radical, destructive action.

Of course, low milk prices have not been the only cause of strikes. In 1916, and again in 1919, the farmers withheld their milk to support the demand by their leaders that the dealers recognize their organization and negotiate prices with them. That was the end of dealer dictation of milk prices in the New York milk shed. Considering the favorable prices for milk that preceded the strike call in January 1919, it is remarkable that the men who directed the Dairymen's League at that time were able to muster enough support to make the strike effective. It is a tribute to their efforts, as well as to the loyalty of the League members, that they were able to compel the dealers to continue the policy of

PRICES RECEIVED FOR MILK AND PRICES PAID FOR COMMODITIES BOUGHT BY FARMERS, IN RELATION TO MILK STRIKES IN NEW YORK

Date of strike	Average of prices for 3 months prior to strike (1910-14=100)*		Difference	Contributing causes
	Milk sold	Supplies purchased		
Oct. 1916	104	124	-20	Dealers' refusal to negotiate with farmers' organization.
Jan. 1919	210	183	+27	Dealers' refusal to negotiate with farmers' organization.
Feb. 1933	75	104	-29	General depression.
Aug. 1933	86	102	-16	Severe drought.
Aug. 1937	110	134	-24	Leasing of Sheffield north country plants.
Aug. 1939	81	120	-39	Severe drought, and C.I.O. agitation.

* Based on United States average prices for commodities purchased by farmers. No similar index available for New York.

plies that are necessary for the household and for operation of the farm in the months just preceding each of the important milk strikes we have had since 1916.

In the past 24 years there have been six milk strikes in the New York territory that were serious enough to attract general attention. With one exception—that is, the strike of January 1919—each of these strikes was preceded by several months during which milk prices were very low in relation to the prices farmers had to pay for the things they bought. Likewise, IN EVERY INSTANCE DURING THIS 24-YEAR PERIOD, WHEN THE INDEX OF MILK PRICES FELL AS MUCH AS 20 POINTS BELOW THE

collective bargaining which had been established following the successful strike of October 1916.

In August 1933, and again in August 1939, severe droughts in the milk shed were partially responsible for the strikes. In July 1937 the Sheffield Farms Company announced that several of their plants in the north country were being leased to a manufacturing subsidiary and would be taken out of the Company's fluid milk pool. That was the spark that touched off the strike in August of that year, but the farmers were already in a desperate frame of mind because the returns they had been receiving for milk were wholly inadequate to pay their expenses.

Both Sides of the Milk Strike

FOLLOWING the recent milk strike, an investigator, representing an organization in no way connected with farming, spent several days visiting with farmers and farm leaders on both sides of the controversy in order to get an impartial view and in particular to find out what was the real connection between the C.I.O. and the Dairy Farmers Union.

We are fortunate enough to have a copy of the report made by this special investigator. It is impartial, except that running through it one feels the sympathy of the investigator for the conditions which dairymen have been up against in past weeks. Space will not permit printing all of this report, but following are some of the interesting comments, first, by the investigator and, second, under the heading "Dairymen's Comments", a summary of remarks made to him by dairymen, some of whom were in favor of the strike and some who were opposed to it.

"Causes of the Strike

"First, the Drought. This drought in the areas affected is the worst one that farmers can remember. Hay and corn, prime necessities for the dairyman, are especially short; pastures are burned dry, and great percentage of new seedlings have failed, many farms are without water, creeks are dry, in many cases water for thirsty cattle and for human needs must be carried several miles. Supplies meant for the winter are being used, so that during the winter farmers will have to buy shipped in hay at a high price. At the present price of milk, most farmers cannot afford to do this, and the strike is the expression of many of them protesting against low prices.

"The Second Cause for the Strike is Misunderstanding. Many did not know that there was to be a hearing to raise milk prices, many did not understand the way the milk marketing order operates.

"Third Cause of the Strike was Propaganda. There are many self-seeking men in the dairy business, and they make it their business to spread false reports, to issue misleading statements, as often as not to their own immediate benefit. For some reason milk seems to encourage hot tempers.

"The Dairy Farmers' Union

"Calling this strike was the Dairy Farmers' Union, headed by Archie Wright, a former C.I.O. maritime organizer. The Union claims a membership of 15,000. There are apparently many members of the Union who sincerely believe that the Union can change conditions for the better, others are members who do not know of any other means for settling their problems. The Union is set up like a labor organization.

"The Dairy Farmers' Union and the C.I.O.

"There seem to be many connections between the Dairy Farmers' Union and the C.I.O. The C.I.O. sent William Gandall of the Transport Workers' Union to Utica, where the strike headquarters were located, to aid in organizing the strike. The C.I.O. is alleged to have brought in out-of-state men to support the strike, but I can find no direct evidence of this. Many C.I.O. unions did support the strike with publicity statements, and it was said that even John L. Lewis was interested. There seems to be little doubt that the heads of the C.I.O. want to make the farm vote pro-labor.

"On the other side of the picture, I found that the majority of the farmers are anti-labor union, and especially anti-C.I.O. Most substantial farmers

Dairymen, Both For and Against, Give Their Views

are especially "anti", but even the members of the Dairy Farmers' Union do not care for any alliance with the C.I.O. The leaders of the Dairy Farmers' Union are wise to proclaim that no connection exists. If there is any agreement, I am sure it is only at the top.

"I have a report of a man who attended a meeting of C.I.O. delegates at which each local was encouraged to vote funds to support the strike.

"The Milk Strike Itself

"How can the Dairy Farmers' Union, with no great percentage of the dairymen in the milk shed, keep almost half of New York City's milk from reaching the city?

"In the first place, the strike was confined to those counties which have suffered most from the drought, and where the farmers' distress is most acute; these are in large part the same areas which produce most milk.

"Secondly, the large majority of the farmers were not striking, did not want to strike, but intimidation, violence, and the hope that this might really be the answer to the problem of low prices, kept much milk at home.

"Third, many plant managers closed their plants rather than risk the possibility of damage.

"Fourth, certain independent plants were closed by dealers who have encouraged the strike as a means of spreading dissension among farmers and as one way of rendering ineffective, or destroying, the Federal-State Milk Marketing Order.

"Dairymen's Comments

"FARMER A: 'Farmers in this area have been visited by an organizer by the name of Porter who is claiming a victory for the Dairy Farmers' Union and attempting to rush farmers into signing.' The first this farmer knew of the strike was when the man who trucks his milk brought his milk back to him and refused to take any more. He did not want to strike and understood that the milk marketing order would have made the same gains without violence. Some milk was dumped, but otherwise there was no violence.

"FARMER B: The drought was very bad in this neighborhood; wells are dry; new seedlings making a poor showing. He delivers milk to a cooperative creamery nearby; 30 out of 35 patrons voted to close the plant in the hope of higher prices. Most of the

other milk in the neighborhood, he thinks, was kept back by fear. He feels that there was no victory. No suggestion of C.I.O. in this neighborhood.

"FARMER C: This man was shot by a farmer deputy sheriff who was protecting his own milk. I talked with this man at length. He could not get enough returns for his milk to live, so worked four nights and Sundays in a paper mill, and still had a hard time. He has a small herd of nine cows, with poor land and buildings run down. His theory is that price of Class I or fluid milk is too high, and price of manufactured milk too low. He was an ardent Dairy Farmers' Union man. He feels the milk order is unfair because it is administered from the top, rather than democratically. He thought the vote establishing the milk order was not representative. Unfair, also, he thought, were the high salaries of the milk trusts. He feels that the Dairy Farmers' Union is really democratic. He knew very little about the milk marketing order.

"FARMER D: This man is a leader in his community. He was strongly against the strike and hauled his milk to the plant as long as it was open. He reports that much damage was done in the neighborhood by irresponsible men. Town loafers and subsistence farmers pulled such tricks as putting ground glass in one farmer's cow feed, cutting fences, letting out stock, dumping milk, throwing kerosene, and putting sand in motors. He saw nothing or heard nothing of out-of-state cars; there was no report of C.I.O. work in the neighborhood and no pickets were paid for their work. He claimed that in his neighborhood the responsible folk were against the strike, and many kept their milk home through fear.

"FARMER E: He had always made a living until the past seven years, and then things had become steadily worse until now he was in debt two thousand dollars and thought he would have to give up. He could see hope in the work of the Dairy Farmers' Union, and he had freely supported them. He admitted that those who opposed the Dairy Farmers' Union program in his neighborhood had been threatened, and if they had not complied with Union demands, their milk was dumped, fences cut, and stock let out.

"FARMER F: This man is a Master Farmer and a member of the Dairymen's League. The drought has been bad in his section, and he as well as most of his neighbors must draw water from a distance. He tried to take his milk to the plant, but it was dumped and he was beaten and dragged through it. The men who attacked him were not C.I.O. men but farmers from the neighboring county. After his experience he did not try to take his milk to the plant. He reports no other outbreaks of violence.

"FARMER G: This man and his brother own a farm together; they are strong Dairy Farmers Union men. He struck when the first word went around and so did almost everyone in his neighborhood. The price increase represents one-third of his milk check if he gets it. There is a strong resentment against the Dairymen's League in his neighborhood because it opposed the strike. There was nothing seen in his area of C.I.O. activity and pickets.

"FARMER H: He held milk at home because of the roving pickets. He did not believe in the strike. He felt the Union was to blame for the low prices because the Union did not approve the voluntary agreement to keep prices up when the marketing order was declared unconstitutional by Judge

Cooper's Federal District Court. He believed that the Jetter Dairy encouraged the strike. Men from the adjacent county were pickets in his neighborhood, and he also saw some from the Ogdensburg shipyards.

"FARMER I: Members of WPA gangs were active among pickets. No violence that he knew of. (Others in neighborhood report milk dumping).

"FARMER J: Reports that those active in the strike were share-croppers and village people. Most milk in the neighborhood was held back through fear. Much milk was dumped, kerosene was thrown, and spiked planks used in the road.

"Other Comments

"George Oppen, Chairman of the Communist Party in Oneida County is a Brooklyn Jew sent to Utica to help with the strike. He states that no out-of-state cars were brought into the country. He says that he knows that the State ILGWU sent the Dairy Farmers' Union \$300, and many other gifts from unions were received. The Communist party actively supported the strike and gained many members. He says that he was in close contact with the Dairy Farmers Union during the strike. He says that the releases of the Dairymen's League during the strike were Nazi inspired, since he held that they were aimed against the Jewish independent dealers. He denies that the C.I.O. will attempt to organize the farmers, but he does see the eventual formation of a farmer-labor party. He says, 'This strike has laid the base for important gains.' The Communist party has 100 members in Oneida County, of whom 15 are farmers."

How to meet the DROUTH CRISIS

This summer's drought has brought about a serious short roughage problem. The situation calls for special feeding strategy or you'll pay and pay for high-priced hay to carry through the winter, and pay in low milk production.

Here's how to save on feeding bills. "Piece-out" your hay and silage with TI-O-GA BIG BAG Dairy Feed, the ideal succulent feed when pastures are poor, hay is short, or silage is low.

TI-O-GA BIG BAG, a very bulky feed (5 bushels to the bag) contains 35% roughage consisting of high grade Alfalfa Meal and quality Dried Beet Pulp. BIG BAG fed now will help you take advantage of better milk prices. New booklet describes complete profit-making program. Send for it TODAY!

NORTHEASTERN Slants ON THE National NEWS

Causes of the European War

IN THE PAST fortnight, the worst has happened. Twenty-one years after the close of the war "to end all wars", the world finds itself faced with another terrible conflict. Line-up so far is Germany on one side, and on the other the British Empire, France, her colonies, and Poland.

Present storm has been brewing since last March, when Hitler, breaking his word given at Munich last September, gobbled up what was left of Czecho-Slovakia. Shortly afterward, he forced Lithuania to surrender to Germany the seaport of Memel (taken from Germany after the World War). Next in Hitler's path was Poland, a state re-created after the World War, partly out of German territory.

In 1919, in order to give Poland an outlet to the sea, the Peace Conference made the city of Danzig (which had been the German capital of West Prussia) a free city, in which Poland was given special economic rights. This city has a 96 per cent German population and has been agitating for reunion with Germany. In addition to rights in Danzig, Poland got in 1919 a strip of land called the Polish Corridor, which has been a special grievance with Germany because it divides Germany proper from East Prussia. (See map on this page.)

Leading Up to the Crisis

For months, Germany has brought pressure to bear on Poland to agree to return of Danzig and the Corridor, although in 1934 Hitler signed a ten-year friendship pact with the Poles. On Apr. 28 of this year, Hitler tore up the treaty with Poland and demanded Danzig and a route through the Corridor from Germany to East Prussia. German newspapers began a violent press campaign, charging that the Poles were mistreating their German minority. The Poles, fearing the same fate as Czecho-Slovakia, refused to negotiate with Hitler unless the threat of force were removed. Instead they mobilized their army and stood guard along their frontiers.

Meantime, Great Britain and France determined to "stop Hitler" if possible by forming a "peace front" to include Poland and other European countries in Hitler's path. Military guarantees were given by them to Poland, Rumania, Greece and Turkey. Britain also tried to bring Russia into the "stop Hitler" bloc, but last month that country made a right-about-face and signed a non-aggression pact with Germany. All this time, the German army was mobilizing, chiefly along Poland's frontiers. With Britain and France completely committed to de-

fend Poland if attacked by Hitler, all Europe prepared for the crisis.

Before the final collision, Hitler was asked "again and again" by British Prime Minister Chamberlain to negotiate directly with Poland as an equal nation and to drop the use of force as a means of gaining his ends. Britain urged that both Poland and Germany refrain from any aggressive military moves during negotiations. Poland agreed to this, but Germany made no reply. Finally, deaf to all warnings from France and Britain that a German attack on Poland would bring them to her defense, Hitler invaded Poland on Sept. 1, his last excuse being that he had offered the Poles a 16-point plan for settlement of the Danzig dispute, and that they had rejected it. Records show that this plan was never transmitted by Germany to the Polish Government.

War Blame

Hitler has placed full blame for war on Poland, and on England for supporting her. "Danzig was always, and still is German," he declared, "and the Corridor always was and still is German." But British Prime Minister has placed responsibility for new World War squarely on Hitler's shoulders. "The German Chancellor has not hesitated to plunge the world into misery in order to serve his own senseless ambitions," he said, and added: "There can be no peace so long as the Ger-

man government pursues the method which it has so persistently followed during the past two years. We are resolved that these methods must come to an end and if, after the struggle, we can reestablish in the world the rules of good faith and the renunciation of force, then even the sacrifices entailed upon us will find their fullest justification."

One of Britain's first acts after declaring war was to drop leaflets in Germany from British airplanes. These were addressed to the German people and stated that Britain was prepared to "make peace with any German government which is sincerely peaceful."

Hitler's Record

During the six and one-half years that have passed since Hitler became Chancellor of Germany, Europe has gone through a succession of crises. Here are some of principal events leading up to climax of the latest World War:

- Oct. 14, 1933 — Germany withdrew from Disarmament Conference at Geneva.
- Oct. 21, 1933 — Germany resigned from League of Nations.
- Jan. 26, 1934 — Germany signed 10-year friendship pact with Poland.
- June 30, 1934 — Hitler ordered "blood purge" in Germany.
- July 25, 1934 — Nazis assassinated Chancellor Dollfuss of Austria.
- March 16, 1935 — Hitler tore up military provisions of Versailles Treaty and announced German rearmament.
- March 7, 1936 — Hitler tore up Rhineland provisions of Versailles Treaty and Locarno Treaty. German troops entered Rhineland.
- March 12, 1938 — Hitler seized Austria.
- Sept. 30, 1938 — Britain, France and Italy agreed to Hitler's demand for Sudeten area of Czecho-Slovakia. Hitler said that this would be his last territorial demand in Europe.
- March 14, 1939 — Hitler marched his

troops into what was left of Czecho-Slovakia, bringing it under German domination.

March 22, 1939 — Hitler took Memel from Lithuania.

April 28, 1939 — Hitler scrapped Polish non-aggression pact and British naval pact.

Sept. 1, 1939 — Hitler invaded Poland.

American Neutrality

Two days after war was declared against Germany by Britain and France, President Roosevelt proclaimed neutrality of United States and put into effect Neutrality Act which places embargo on munitions shipments to warring countries. Discussed is probability of Congress being called back to amend neutrality law, so that warring countries could buy munitions from us on cash-and-carry basis. Law as it now stands is considered by many to favor Germany, because it prevents France and Britain from getting munitions here. Law will not affect Germany, as French and British blockade of her shipping would make it impossible for her to get supplies from United States anyway.

As we go to press, it has been announced over radio that a Pan-American conference is being called to discuss ways and means of keeping this hemisphere out of war.

On the European Fronts

Since Britain and France made their formal declarations of war against Germany on Sept. 3, German Army and air force have redoubled their efforts in Poland, evidently hoping to conquer quickly there and then bring all their strength to bear against France and Britain. Another guess is that Germany hopes to subdue Poland in short order, and then force a peace with the allies, leaving her in posses-

The map at right shows some of the factors involved in the European War. Immediate cause of the conflict was the German-Polish dispute over Danzig and the Polish Corridor (indicated by arrow on map). Note how Corridor separates Germany proper from East Prussia. Heavy lines on map along German-French border show where Germans and Frenchmen face each other behind their great fortified lines — the French Maginot Line and Germany's Siegfried Line. Cut this map out and keep it for future reference. It will be helpful in following war news. For a concise record and clear picture of the causes behind Europe's terrible conflict, read the article on this page.

sion of Poland. However, Britain and France are not expected to play this game. Their people are tired of "annual mobilizations" and of war scares, and prefer the certainty of war and the chance of putting an end to the fear and anxiety to which they have been subjected in late years. France has announced that she has begun attacks on Germany's Siegfried Line (see map). Britain has begun her blockade of Germany and attacks on German ships.

Most harrowing news received so far has been sinking of the British ship *Athenia*, with loss of over 100 passengers. Ship, which was carrying 1400 passengers from Scotland to Canada, was torpedoed by a German submarine without warning. Germany government has denied this, and suggested that ship may have struck a floating British mine. British government, however, states that there were no mines in those waters, and officers and passengers of the *Athenia* have testified to seeing the German submarine, which apparently rose to the surface and again shelled the ship after she had begun to sink and passengers were being taken off. If a German submarine was responsible for this tragedy, it means that Germany has broken her solemn pledge, under London naval treaty, not to sink merchantmen without warning, or without first putting passengers and crew in a place of safety.

SLANT: There is little doubt that if Hitler and Nazi Germany had a better record—a record of straight-dealing, of respect for international law and for the rights of individuals and small nations, instead of a record of broken promises and of ruthless aggression—there would have been no great crisis over the German-Polish dispute about Danzig. This territory was German and peaceful negotiations could have brought about a settlement more or less satisfactory to all concerned. The war is being fought not over what Hitler wanted in this case, but over his methods. The real issue is whether permanent European peace is possible while Nazi rule exists in Germany.

See editorial "No Blackout of American Peace," page 4.

■ Farm War Council Appointed

ONE OF first results of European War in this country is appointment by U. S. Department of Agriculture of an Agriculture Advisory Council to assist in formulating policies for production, distribution and marketing of foodstuffs under new conditions which now exist. Council members will include representatives of most groups involved in producing and distributing food.

Secretary Wallace, in announcing new farm war council, said that this country has abundant food and fiber supplies and that "by working together, farmers, business men and government can make these supplies available at prices fair to consumers and producers alike. New and difficult problems will confront us, but they can be solved without resort to the methods of dictators. We are going to work together to solve them, and we are going to do it within the framework of our economic democracy. We can, if we will counsel realistically and democratically together, avoid the economic turmoil which produced the regimentation that is now found almost everywhere in Europe."

First meeting of new Council is set for Sept. 19. Other meetings will be held from time to time as problems come up.

SLANT: Secretary Wallace has chosen a strong Council. The list of men representing the Northeast are

John D. Miller, president of the National Cooperative Council; Beardsley Rumf, of R. H. Macy and Co., New York City, and Paul Willis, president of the Associated Grocery Manufacturers of America, New York City.

■ Panama Canal Quarter-Century Old

LAST MONTH, 25th birthday of opening of Panama Canal to commerce was celebrated. First ship to traverse waterway, and now about to be scrapped, the Ancon, made one last trip through it in honor of occasion, bringing number of ships of all nations that have traveled it in past 25 years up to 155,131. Brig. Gen. Clarence Ridley, Governor of the Canal, praised friendly relations existing between Panama and the United States, stressed value of canal to United States Fleet and in promoting greater accord in Latin America, and pointed out that in spite of its half a billion dollar net cost, it is now paying its way with interest.

Good Books to Read

BACK ROADS, Katharine Haviland-Taylor. The story of a country doctor, Ezra Winters of the gallant heart. A character study of a good, simple and faithful man. Lippincott Company, Philadelphia, Pa. \$2.50.

Good Movies to See

STANLEY AND LIVINGSTONE. Dr. Livingstone, born in Scotland in 1813, was destined to become one of Africa's greatest explorers. His travels covered one-third of the continent, extending from the Cape to near the equator, and from the Atlantic to the Indian Ocean. In the countries where he travelled his memory is cherished by the native tribes. This screen version of Stanley's search for the great explorer will appeal to all ages.

See Puffiness Go

Quick Relief Saves Horse for Next Day's Seeding . . .

Puffy knees mean time lost during the busy planting season. You must give your horse quick relief if you want to use him next day. Absorbine does this. It sends an increased blood supply to the sore muscle area where puffiness shows. And the blood carries off the congestion quickly. Use Absorbine before and after the day's work. Will not blister. Used by farmers for over 40 years! \$2.50 a bottle. W. F. YOUNG, Inc., Springfield, Mass.

Absorbine's action goes direct to sore area

—ABSORBINE—

For relief of Your Own Strains, Muscular Aches and pains, use Absorbine Jr.

Say you saw it in AMERICAN AGRICULTURIST.

Here's Long Hard Mileage ..and Savings Spread over the Years

Left: The International Model D-30, for 1½-ton loads. Also available—as Model DS-30—with two-speed axle which doubles the number of forward and reverse speeds.

● When you invest in a motor truck, what is going to be its condition at the end of a year of hard service? Or two years, or three?

A demonstration and a ride, when the truck is brand new, can't tell you what you're going to find out after long mileage. And that's what you want to know when you buy. Satisfactory performance is common enough in most new trucks today, but not all trucks can keep on giving you trouble-free, dependable, low-cost service for long.

By far the greater part of a truck's economy is in lasting stamina—a steady procession of

ton-miles delivered over a period of years. That is being proved by these *all-truck* INTERNATIONALS in the hands of thousands upon thousands of owners.

Investment in International's lasting quality will give you liberal savings spread over many years. Sizes from Half-Ton pickup trucks to powerful Six-Wheelers. Ask any International dealer or Company-owned branch to show you the right truck for your hauling.

INTERNATIONAL HARVESTER COMPANY

(INCORPORATED)

180 North Michigan Avenue

Chicago, Illinois

INTERNATIONAL TRUCKS are built for low-cost operation in all classes of field and farm-to-market hauling. Some are available with a two-speed rear axle. This means *extra pulling power* when you need it in tough spots, and *speed* when you want it over good going. If you need a heavy-duty truck, here's a fact that will interest you: International Harvester sells more heavy-duty trucks—2-ton and up—than any other three manufacturers combined.

Right: International pickup trucks are available in three wheelbase lengths. Capacities ½-ton to 1-ton.

DOWN THE

By J. F. (DOC) ROBERTS

ARE THE County and State Fairs, which we have all been attending the past few weeks, "girlie" and "razzle-dazzle", shows or are they of real value to agriculture? In spite of the midways and the clamor, there is no doubt that they are offering opportunities that cannot be found anywhere else.

How can any individual who is at all livestock-minded, or who has been associated with animals, see a two-minute, trotting or pacing race and not be impressed with the smoothness of movement, the power under motion, the soundness and the endurance of a true race-horse, and who can help but get an inspiration from the improvement that good breeding, good training, and good care have brought about in our standard race horses?

Is there anything more beautiful than a class of draft horses being shown at any Fair? And perhaps the educational value of such a class was best expressed when a good judge said this week, "Any real livestock man has a picture in his eye of the ideal animal, no matter whether it be horses, cattle, sheep or hogs, and should rate the particular animal in front of him according to how nearly this animal approaches the perfect, or the ideal". So, while the average farmer may not desire to own one of these wonderful show animals, it does give him a picture which is invaluable to him.

Incidentally, it appears to me that the big horse weighing a ton or over is very rapidly on its way out, and that the horse weighing from 1300 to 1600 pounds is very rapidly coming in. There is no real argument today for the great big overgrown animal, but neither is there a real argument against at least a team of good 1400 or 1500 pound horses for every farm; and it is my opinion that the draft horse, as it is appearing at the Fairs, is an illustration of the interest, the demand, and the economic value of such horses on any farm.

The man who will spend even a little while among the sheep pens will see the difference in the size of the breeds at the same age, will see the difference in the type of wool, the difference in their ability to convert food into flesh, as shown in their general conformation. You do not have to be an expert to see these things. In fact, I walked into the sheep pens with a man who had just told me that he didn't "know a sheep from a billy-goat", and he hadn't been there ten minutes before he had become interested, was pointing out to me the differences in the various breeds, and applying them to the conditions on his own farm.

When it comes to cattle, whether dairy cows and heifers, bulls, or beef breeds, there is no city woman who cannot very quickly see the difference between the angular Holstein and the round Hereford or Angus. This has value from that woman's consuming standpoint, to say nothing of the value to the man who is about to fatten an animal for his own use this winter, or whether he is going to fatten animals for sale.

To leave out the opportunities that Fairs are offering to the boys and girls would be the biggest mistake of all. These boys and girls are giving the old heads an awful run to keep up with them, and if they can get that sort of enthusiasm and education by producing something to show in competition, then the Fair is worth all that it is costing, and all the tired feet and buzzy heads that it is giving some of us who have outgrown the thrill. Young people are the ones who are

making up the bulk of the attendance at these Fairs, and are really showing the interest, and that's the way it should be.

War and its relation to livestock prices is, of course, anyone's guess, but with the generally improved conditions in this country, there is no reason to believe that livestock prices will collapse, and I believe there is no justification for the thought that they will pyramid. If this horrible thing should go on for a matter of three or four years, it might have a very decided influence on prices, but I even doubt that, because we are so regimented now that to hold prices would not be a very long step.

Grange Gleanings

(Continued from Page 6)

Mountain County Pomona; the oldest daughter, Virginia, is secretary of Morris Juvenile, and the youngest son, Bradford, is its treasurer. There are two other youngsters in the family, farther down the line, the youngest only five, and if a more loyal Grange family can be found anywhere their names should be inscribed upon the tablet of fame.

THE NEW ENGLAND Lecturers' Conference recently held at the State College at Kingston, R. I., brought together nearly 800 enthusiastic Grange hustlers and proved a four-day event of rare value. This was the 28th annual gathering of New England Grange workers. Vermont was unanimously selected as the meeting place for next year's conference, with the State University at Burlington the point of assembly.

TWO MEMBERS of Green Mountain Grange, No. 1, at St. Johnsbury, Vermont, were recently presented with Golden Sheaf certificates by State Master Henry A. Stoddard. Of special significance was the fact that both were initiated into the Grange the same night, have worked side by side continuously for exactly 50 years and both are still hard workers and loyal boosters for the Grange.

HOOKSETT Grange in New Hampshire is very proud of the fact that in its officers' list this year are triplets—Sylvia, Samuel and Gilman Poor—who hold the respective offices of Flora, steward and gate keeper. Their father, the late Samuel Poor, was master of Hooksett Grange and for some years deputy of the New Hampshire State Grange, while their mother is a past master of Suncook Valley Pomona.

VERMONT has another new Grange, located at Lunenburg. State Master Henry A. Stoddard was the organizer. There are well-founded rumors of still more new Granges in Vermont before the annual session of the State Grange, which is due at St. Albans three days beginning October 17.

"Next time I ask whose little pig you are, I want you to say 'Mamas'—not 'Farmer Jones!'."

NEARBY MARKETS for NEARBY POULTRYMEN

The Measure of Value

By J. C. HUTTAR

IT IS SAID that if you repeat a thing often enough it either sinks in or else it becomes pretty tiresome. In a dozen different ways I (and others too) have tried to impress egg producers with the importance of interior quality. Not so much because of what we have said, but because market men have been willing to pay an ever increasing premium for eggs of fine quality, the message has definitely sunken in with a larger and larger proportion of our northeastern poultrymen.

J. C. Huttar

I started to write this article two weeks ago. At that time I was in New York for about a week and it was intensely hot and "muggy". If there's anything that will bring out the weaknesses in an egg it's a combination of heat and high humidity. The humidity angle of this statement may confuse you a little because I have talked a lot about the importance of moisture in the holding of eggs. There is a difference though. Having the air in a cool holding room, fairly moist does not seem to bring on too much activity in those germs that cause eggs to spoil, at least for a short time.

When it is hot and humid, however, we have the conditions that are ideal for the activity of these germs. Furthermore, those are the times when eggs tend to pile up a little bit in wholesale markets.

This combination of weather and time wilts the inside of an egg just like it did my clothes two weeks ago in New York. First, the egg white loses its stiffness and appears to thin out and become watery. Then that thin but tough membrane, which holds the liquid contents of the yolk together and makes a nice round ball of it, loses its strength and stretches so that the yolk flattens out when an egg is broken on a plate.

Let's not get too far away from our original idea which is the measuring stick of egg prices. Two weeks ago the best quality eggs, weighing 59 to 60 pounds gross to the case, were selling for 28 to 29 cents. The grade called "Mixed Colored Firsts", which come from the middle west and are decidedly lower in quality but weigh from 54 to 56 pounds, had to be supported heavily by government purchases in order to maintain a price of 16 1/4 cents a dozen. So that you can readily see that if we allow about twelve pounds for the weight of the case, flats, and fillers, we have 47 to 48 pounds of eggs selling for about \$8.50 on the one hand as against 43 pounds of eggs selling for less than \$5.00 on the other hand.

I do not believe that it costs any more per pound to produce large eggs than to produce Mediums or so-called "Mixed Colored Firsts". If that is true, you can see what I am driving at on this matter of quality. Two weeks ago the quality product brought 18 cents per pound and the average to poor product brought a little over 11 cents. In the past two weeks the government has raised its purchase prices a half cent on the Mixed Colored Firsts bringing them up to 16 1/4 cents but the quality eggs have jumped up to 36 and 38 cents or about 8 cents a doz-

en in the same time. Naturally, this is mostly due to supply and demand. In other words, these fine large eggs were coming into the market in smaller quantities against a fairly consistent demand. The supply of eggs of the quality of Mixed Colored Firsts were not dropping anywhere near as rapidly and the demand was certainly not increasing. As a matter of fact, there are a lot of eggs in the storage warehouses of the country which were of very fine quality when they were put away in the spring that can supply that demand for lower quality eggs with plenty to spare.

Nearby Eggs

Translating this into Nearby egg language it merely means this. A good percentage of our total production is definitely quality stuff and can be depended upon. Then there is another fairly sizeable chunk that is usually good but during haying and harvesting and a few other times when farmers are busy, the quality of these eggs shows the neglect which they have suffered. Finally we still have a small group of eggs which are thrown in direct competition with these hundreds of car loads of cheap eggs from other sections. I know it's very hard for a farmer who has a hundred hens that have dropped down to thirty or forty per cent production to understand how the value of his ten day old shipment can possibly be so much lower than that of his commercial poultryman neighbor. But experience has definitely proven that the poultryman who has a big stake in his chicken business produces the higher quality egg and here is something more. You walk through the wholesale market of any city at a time when the market is weak, go from store to store and find out how big an inventory is on hand and what kind of eggs make up this inventory. It's the exception if you can find any of the top quality eggs. On the other hand, lower quality eggs are in such keen competition with each other that it is almost impossible to keep them cleared in these low markets.

With war an actual fact now in Europe the possible demand for grains has already boosted the price of feed. How much higher it will go is anybody's guess. In these circumstances, with the prospect for egg prices not very bright, but the likelihood of higher feed prices, I see two very definite things in the present poultry situation. The first is that flocks must be culled very rigidly and only the highest producers kept for the coming year. This culling should be done every week so that boarders are not held on, eating high priced feed for more than a few days. The second thing is that we must do everything possible to get the very cream of these egg prices because even the cream will be none too rich.

"Don't look now — at the front window there's a Peeping Tom."

NEARBY MARKETS for NEARBY POULTRYMEN

Graduation Time for Pullets

IN THE pullet flock, Graduation comes in the fall instead of in June. It is an important event in the life of a pullet, not to mention her owner's, when she leaves the pullet range and begins to support herself and her owner as a member of the producing flock.

Poultrymen seem to worry very little these days about getting the pullets in the laying house before they begin to produce. A rather general rule, however, is to make the change before egg production gets much above 10 per cent. More and more chicken men are providing nests on the range so that the pullets will get accustomed to them. At the Rice Poultry Farm at Trumansburg, N. Y., they have a battery of movable nests which can be hung on the end of each brooder house, and in their case this seems to work very satisfactorily.

If we look at the situation from the pullets' point of view rather than from our own, we ought not to make many errors. Everyone likes to work in pleasant surroundings and chickens are no exceptions. That means that the first step to be taken before we move a pullet is a thorough house-cleaning, and we mean thorough. That will mean getting right down to the wood or concrete, a fresh coat of white-wash, and clean litter on the floor.

When that job is done, plan to move the pullets in with as little fuss as possible. Pullets will appreciate their clean quarters, but just like humans, they don't like to be crowded. Three to four square feet of floor space per hen is the standard rule. We often hear of men who get away with less space than that per hen, but they are courting trouble.

Again referring to the similarity between hens and humans, we can't logically expect them to do a good job for us unless we provide them with the working tools, which in the case of pullets means feed, water and a place to eat, roost and lay. It is frequently recommended that the ration should not be changed the day the hens are moved in. Feed them as you have been feeding them on the range, and delay the change to laying mash for a few days.

Another point, small but important, is to feed them in the same kind of hoppers. If the laying house hoppers are up on legs and the range hoppers have been on the ground, provide at least a few low hoppers until the pullets learn to use the new ones. If pullets are laying heavily when they are brought in off the range, the use of wet mash may lessen the shock of the change.

It should be unnecessary to say,

"Provide plenty of nests," but we have been in some chicken houses where this rule was not followed. One nest to five or six hens is about right. Put them high enough so that birds on the floor can't interfere with pullets when they are laying.

Pages have been written about the question of culling pullets when put into the laying house, but as yet it is difficult to get two men to agree as to just what should be done. Of course, it will be necessary to handle them if they are culled, and it is important to handle them gently, disturbing them as little as possible.

There is little disagreement over the idea that pullets put in any one pen should be about the same stage of development. In other words, pick out the finest, biggest pullets and put them in one pen and those not quite so far along by themselves in other pens.

It is not true that a pullet that is a little slow in developing is worthless. Put in a pen with other individuals like her and assuming, of course, that she has the inherited ability to produce, she is likely to develop into a profitable bird. Needless to say, there is no object in putting in a pullet that will never produce a profit, but right here is where the argument begins. My own opinion is that if pullets have been properly raised, it should be unnecessary to cull out many.

Weight changes in pullets are very important. So far as I know, there is just one way to know whether they are gaining or losing. That is to mark a few of them and weigh them once a week. Pullets should gain weight even though they are laying. The point is that they will lose weight but keep on laying for a time. Then they will go on a strike, and it will take several weeks to bring them back in laying condition.

With most poultrymen it is a case of using the houses they have and perhaps looking forward to the time when they can be improved. In that connection, it does no harm to keep in mind that unusually warm weather soon after pullets are put in may result in actual suffering from heat. The answers to the problem are insulation and ventilation. Properly insulated, a poultry house is cooler in summer and warmer in winter; but if the house isn't insulated and you can't insulate it this fall, attention to ventilation by seeing that windows are open to furnish cross-drafts will lessen the shock of change from range to house conditions. As the season progresses into the winter, one of the chief reasons for ventilating is to keep the house dry, but that is another story.—H. L. C.

A nice bunch of pullets on the farm of Ralph Space, Dryden, New York.

Their RECORD of PERFORMANCE PROVES their EFFECTIVENESS

They DON'T Knock Egg Production

NOW—worm laying hens without egg loss! The Record Of Performance back of Rota-Caps proves they don't interfere with egg production of laying hens, or sicken the birds.

They DON'T Set Back Growing Birds

Rota-Caps cause no loss of weight—no set-back to growth! See your Dr. Salsbury dealer, or order direct. State quantity and size, enclose check or money order. Dr. Salsbury's Laboratories, Charles City, Iowa.

PRICES: Pullet Size: 100 Rota-Caps—90c; 300—\$2.50; 1000—\$6.00. Adult Size: 100—\$1.35; 200—\$2.50; 500—\$5.00; 1000—\$9.00.

Covered dishes like this one simplify community suppers by helping to solve the problem of keeping food warm and fresh. This aluminum server has a vent in the cover which may be adjusted to crisp or freshen, as the case may demand.

—Photo courtesy of West Bend Aluminum Co.

for average casserole. Bake one hour. And why not have ham loaf or steamed salmon loaf for a change?

Ham Loaf

2 pounds of ham	2 eggs
1 pound hamburger steak	1 cup of milk
1 lb. fresh pork	salt and pepper
3 cups of crumbs	

Put the meat through a food chopper. Add crumbs, salt, pepper, slightly beaten eggs and milk. Mix thoroughly. Bake in greased bread pan for about 2 hrs. at 350°. Do not overcook. Makes about 24 servings. A horseradish sauce (horseradish added to whipped cream) is an attractive accompaniment.

Steamed Salmon Loaf

1 can salmon	1 tbsp. minced onion
Milk added to liquor (enough to make one cupful)	3 eggs—yolks and whites beaten separately
1 cup cracker crumbs	Salt, pepper, and celery salt

Combine all but egg whites; mix thoroughly. Fold in whites. Steam in a greased double boiler.

PERHAPS you call them pot-luck suppers or picnic dinners or covered dish meals—every section has its own name—but whatever they are called you bring the whole family, your table service (so that no one will spend the evening washing dishes in the kitchen), and every one contributes a little toward the coffee expense. The purpose of the community supper is not just money-raising, but sociability; and if there's any place in the world where good standards of cooking and table service can be spread around, it's at this sort of a meal.

It's amazing what variety of food often appears at a neighborhood get-together. A city cousin of mine remarked when he viewed the table at a Church supper: "You don't mean that you get all this in return for the dish of Harvard beets you brought!" Of course, sometimes there's not enough variety. I remember one newcomer to country ways who wondered if she were attending a macaroni contest!

In our neighborhood there is a growing feeling that covered dish meals, in order to be happy affairs, need more planning. At least a committee needs to have the kitchen stove hot. It is dampening to enthusiasm to rush over to the nearest house and anxiously wait for the coffee pot to boil. If at all possible, plan the menu and ask in your publicity that folks bring items from that menu. Or else phone all those you possibly can and ask them to bring dessert. If people are coming from several neighborhoods, often each group can furnish one part of the meal. There is the Federated Church where the farm families often bring freezers full of homemade ice cream. A crowd always turns out those nights. Somehow the news gets around.

Tables for the community meal should be as attractive as the ones for the chicken supper when the city Kiwanis club is entertained. Try lavender paper, with whatever decoration is seasonal at the time—trailing myrtle or ivy from the stone wall, colored easter eggs in heirloom baskets, cowslips and violets, apple blossoms (forced blossoms of early shrubs are fine if you allow enough time), spring flowers, fall fruits, or winter berries. Even balloons tied to flower frogs give a festive air.

Have plenty of help to serve the tables; don't let one group manage all the food. Why not let the men help with the serving, and carry heavy pitchers of coffee, water, milk, etc? Tables arranged in hollow squares, or in friendly groupings, are better than long tables spread out the length of the hall. Singing at the tables helps

Community Suppers

By MARY HEALD WILLIAMSON

break the ice and often a program can be enjoyed while the group is at the table.

From the Home Bureau comes these good suggestions for committees for all community meals:

General committee: Decide time, place and number to prepare for.

Foods committee: Solicit food and arrange for its transportation. Also arrange for fuel, and for someone to be in charge of the kitchen before the meal.

Dining room committee: Secure tables and chairs, dishes, silver, salt and peppers, creamers and sugars. Set the tables, decorate them; be responsible for ventilation; restore order in dining room after meal.

Service committee: Determine those who shall do the serving, wait on table, prepare for clean-up committee.

Clean-up committee: Be responsible for plenty of hot water for dish-washing, soap, and plenty of fresh towels; wash dishes; leave kitchen in order.

Hostesses committee: Help with seating; get conversation started.

Publicity committee: Put notices in paper, in church and in school. Get out posters.

What to Take

What shall we take to the covered dish dinner? Perhaps you are tired of meat loaf and scalloped potatoes. I heard a city man refuse an invitation to a country church dinner the other day. "No, sir," he said, "no scalloped potatoes and meat loaf for me", and he hadn't even read the menu! Why not try this kind of potatoes: Cube your potatoes and boil until nearly soft. Make a thin white sauce, add cheese and 1 pimento cut fine

tightly covered. Serve with creamed peas and carrots.

Our Home Demonstration Agent, Mrs. Marguerite Dixon, has this to say about foods for the community meal:

"It is sometimes wise when you have such variable things as meat loaf and scalloped potatoes to have them made by two or three folks working together. Some dishes that need not be piping hot to be good are: Cheese fondue, salmon loaf, ham loaf, baked pork and beans, fish fillets. Some things hold heat well, like individual meat and vegetable pies, bacon and lima beans, spaghetti and meat balls.

"Salads can be in shape of relishes or dishes to pass, strips of carrot and celery. Vegetables can be kept hot and buttered in a steamer; serve hot cream sauce from a double boiler over them. For desserts, individual pies and cakes, large cookies, cup custards, and baked apples make easy servings, and left-overs are not messy to take home to use in the children's lunches the next day."

Here are some more suggestions of good things brought in carefully packed baskets that have brought forth ohs and ahs from neighbors, and made families mighty proud of their home-maker:

A large old-fashioned glass dish filled with carrot strips, celery curls, thin dill pickle slices and a few ripe olives to accent color and taste.

A wooden bowl at a fall supper filled with choice apples and, for a rare treat in the middle of winter, with crisp greens and a few radishes and a piquant French dressing.

On a winter night, a platter of little sausages surrounded by apple rings cooked in red cinnamon syrup.

An egg noodle-corned beef casserole, put together with a rich (Turn to Opposite Page)

Give Snap to the ALL-DAY FROCK

THE princess style in some form or other ranks high in favor this fall. Shoulders are squared, but softer than heretofore, with less padding and more dependent upon tucks, pleats and cartridge effects. Necks are high with simple collars, notches or self detail.

PRINCESS FROCK NO. 8592 is an excellent all-round dress that will go any place. Sizes are 12 to 20. Size 16 requires 27½ yards of 54-inch material, ¾ yard of 39-inch contrasting.

GIRL'S SHIRTWAIST DRESS PATTERN NO. 2620 is delightful for the little girl and is as practical as the day is long. Sizes 6 to 14. Size 8 requires 2 yards of 39-inch material, ¾

yard 39-inch contrasting. Name embroidery pattern E-11171 must be ordered separately, price 15c.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our attractive fall and winter fashion catalog.

Today in Aunt Janet's Garden

Borders Furnish Surprises

LAST FALL while my mistakes and little successes were still fresh in my mind I set about rearranging most of my perennial borders. I should say I had more failures than successes with that fall transplanting, in that I lost many phlox and chrysanthemums which I moved at that time.

This I feel sure was not altogether due to their being moved but to some peculiarity of the season, because I had often transplanted both phlox and chrysanthemums practically until killing frost without losing them. My personal theory is that the mild fall encouraged tender growth which was killed by the sudden and severe weather which fell upon them at Thanksgiving. At any rate this year I am minus some of my choicest and most colorful varieties which I had depended upon to make the patterns of my borders complete. Another disappointment came when I found that the double Shasta daisies had not lived over the winter. I should not feel too badly about this, however, because they are not reliably hardy.

Another thing which spoils my plan in the phlox border is the large number of seedlings which now show themselves in the most inconvenient places, in the center of a named variety, for instance, or in the middle of a clump of peonies. A year ago I took up what appeared to be bushels of seedling phlox and this year there are almost as many to be lifted. All this only emphasizes one feature of phlox propagation, namely, that it is easy to get new plants from roots left in the soil after lifting a clump. In fact some people make a practice of getting new plants by cutting under the old clump with a sharp spade, leaving the tips of the roots still in the ground, an easy way of increasing the stock of named varieties.

Another important thing to remember in dividing phlox is to discard the woody center of the clump. This applies equally well to chrysanthemums. Last year I built up a border of azaleamums, Amelia or cushion chrysanthemums, which ever you choose to call them. In order to complete the border, I yielded to the temptation of using centers of clumps as well as the younger outside shoots. This year I am punished for my horticultural sin by blank spaces where azaleamums should be growing. Another of my garden errors was in not removing all flower heads from the phlox as soon as they faded. That probably accounts for some of the many magenta shades in my border of otherwise clear colored hybrids.

Community Suppers

(Continued from opposite page)

cream sauce with a smart flavor of thyme, parsley and celery salt.

Big pitchers of chocolate milk.

Well, after all, life itself is just a covered dish, a dash of spice, an element of surprise, the ingredients for neighborly visiting, the nourishing of body and spirit in the good things from the soil and country kitchens. Let's keep the basket packed and invite all the neighbors to bring theirs!

**I'M AN OLD HAND AT
JELLY-
MAKING
SO I ALWAYS USE THE
"TRIED AND TRUE"
PECTIN-CERTO!**

Says
May Robson

PROMINENT STAR OF
STAGE AND SCREEN

WHY 3 OUT OF 4 JELLY CHAMPIONS STICK TO CERTO:

1. Certo is the "tried and true" pectin that takes the guesswork out of jelly-making!
2. Certo alone gives you 79 recipes—a separate tested recipe for every fruit!
3. Certo reduces boiling time to ½ minute for jellies—only a minute or so for jams!
4. Certo jellies retain fresh fruit flavor—no "boiled-down" taste!
5. Certo gives you half again more glasses—makes all fruits jelly perfectly!

Look for the tested recipes under the label of every bottle of Certo—a product of General Foods.

Says Mrs. V. J. Daniels whose jams and jellies made with Certo took 7 prizes at the 1938 Midland Empire Fair.

Insist on CERTO THE "TRIED AND TRUE" PECTIN THAT TAKES THE GUESSWORK OUT OF JELLY-MAKING!

Old Home Week at Waynor

II. "The Last Panther"

EDITOR'S NOTE: "Old Home Week at Waynor" will run in four installments, but each story is complete in itself.

THE SECOND evening was wet, so very wet, that the corn roast and the moonlight ride through the town which had been planned by the young people had to be postponed.

In place of it "a dinner of ye olden time" was given at Dennett's. Roast pig, samp, squash pies, sweet-apple bannocks and other pioneer dishes were conspicuous.

There was great hilarity round the board at Dennett's that night. It was a good night for stories, and a great deal of the town's early history was overhauled and recounted. Indian stories, war stories, stories of "cold snaps", droughts and freshets followed stories of huskings, apple-bees and town meetings; and it was not till ten o'clock or past that they came to Rufus Long's adventure with the catamount. That was in the fall of 1858, the year of Donati's comet, which so many old people believe presaged the coming of the Civil War.

The first farmers who cleared land in the town occasionally saw a panther, or heard one scream at night. But panthers were never numerous in northern New England, and appear to have come at intervals from farther to the southwest. There had not been one seen in Waynor for twenty years, until this last one appeared.

The first heard of it was one evening about the middle of September, when a farmer named Brooks, who lived in the west part of the town, was astonished to see his herd of young cattle, fifteen or sixteen in number, coming on the run, with tails erect, from a back pasture.

The next morning it was discovered that two of them were badly scratched and lacerated, as if by the claws and teeth of some animal. At the time it was believed to have been a bear.

A day or two later Sally Edgecomb, a widow with children, was returning home alone in the evening, bearing a large basket of clothes. She did washing for her neighbors, and was accustomed to carry the basket on her head—a fortunate thing for her that night.

As she approached her door some animal sprang at her from behind with such force that she was knocked headlong from beneath her basket, which fell, scattering the clothes on all sides.

This so disconcerted the creature that it bounded suddenly away. The woman ran indoors, screaming loudly. People decided that a wildcat had attacked her.

It was very dry that autumn; there was no game in the woods. The ponds and lakes were unusually low, and all the small mill-streams. The farmers were obliged to send grists to "Folsom's Mills," in an adjoining town.

Rufus Long—a cousin to Charley and Frank—was sent to Folsom's Mills one morning early in October, with four bushels of wheat and two of corn. He travelled in an old "through-brace" wagon, drawn by a large red horse called Jim. The distance was thirteen miles; but he made an early start, and was expected to be back by three or four in the afternoon. Rufus was then nearly fourteen.

When he reached the mill, however, he found seven or eight other grists there ahead of him. Rufus had to wait his turn at the hopper.

Waiting was pleasant enough, however, for Rufus had the mill to see and the dam and water-wheel to look at; and later he went fishing up the river

with the miller's two daughters. When they came back the girls treated him to doughnuts, so that on the whole Rufus had a good time. But the six bushels of grist were not ground and sacked till after dark, and then Rufus had thirteen miles to drive, with the meal-bags piled in the back of the wagon.

The night was clear yet rather dark, but the weather had turned very warm, so warm that mosquitoes came out. High in the northern heavens shone the great comet with its curved tail. In the loneliness of the road Rufus fell to thinking of what people said of the comet, and watched it, as the horse plodded on, with an ill-defined sense of dread.

From contemplation of the comet Rufus was suddenly recalled to terrestrial things by a maniacal shriek off in the woods on the west side of the

By C. A. STEPHENS

road. His blood ran cold. He listened for an instant, then shook the reins over Jim. It was not the panther, however, that Rufus was thinking of, but the old madhouse on the Chandler farm; the cry had seemed to come from that direction.

Asylums for the insane were few in number then, and not much patronized. Lunatics had to be cared for at home. If mildly insane they were confined in a room of the dwelling-house, which was provided with bars for the door and windows. But when they were very violent and noisy, naught remained but to build a small, strong log house for them, at a distance from the farmhouse.

The Chandler madhouse was built for confining one Duncan Chandler, a Revolutionary soldier, who became insane in 1814, and was kept in it for eleven years. Afterward one of the

next generation was confined in it for a year. Insanity occurred in this family occasionally.

In 1846, Christobel Chandler, a woman forty years old, fell into a condition of such cunning, treacherous mania, that, after killing another member of the family with a knife, she was incarcerated in the old madhouse, which, however, was improved for her use so far as her mental infirmity rendered possible. The woman lived here for four years, but was found dead and frozen one bitterly cold February morning.

People imagined that they heard the shrieks of Christobel Chandler at the madhouse in the woods after her death, and the rumor went abroad that the old structure was "hanted" by her ghost.

That was Rufus Long's first thought when he heard that wild shriek. He started the horse at its best pace. But he soon came to the foot of a hill among the pines, where the horse could not make haste with the load; and here, glancing back, he saw the outline of some animal in the road behind the wagon, and caught the gleam of two pale shining spots close to the ground.

Rufus still thought that it was the crazy woman's ghost coming after him "on all fours," as he said afterward; and turning, he screamed, "Let me alone! You let me alone!"

His outcry seemed but to incite his pursuer. It glided nearer and jumped, striking its claws into the topmost meal-bag. But the bag gave way under its clutch and rolled off into the road behind, the animal with it. The horse, hearing or scenting the panther, went tearing up the hill at full speed.

The fall of the meal-bag stopped the animal for a moment, but it soon came after the wagon with long bounds and sprang up behind again, spite of the whip with which Rufus struck at it.

The boy's account as to what happened next was not very clear. He almost fell out, and came near going down between the wheels, for the horse was running and the wagon bumping and bounding wildly. He lost both whip and reins; and when he recovered himself he saw the form of the catamount on old Jim's back. The beast was apparently rabid from hunger. It growled fiercely and set its teeth in

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines and poem must be original and written by an amateur. \$2.00 will be paid to the author of each one printed. Check will be mailed on or about first day of month following publication.

Send poems to Poetry Editor, American Agriculturist, P. O. Box 367, Ithaca, N. Y.

Today

Today is today,
There is no tomorrow.
Laugh while you may,
Think not of the sorrow
A new day may bring.
Why bother to borrow
Trouble-birds on the wing?
By care unencumbered
Carelessly fling
Songs to the Spring.
Not one is unnumbered.
We have lived through today—
Sufficient tomorrow
Is the evil thereof.
Why bother to borrow?

—Elizabeth Webster,
Whiting, Vermont.

EDITOR'S NOTE: It has been called to our attention that the poem, "A Prayer for Courage", published in our August 19th issue, was written by Grace Noll Crowell, and not by the person who sent it in and signed her name to it. We regret this very much, and again call attention to the fact that this corner is reserved for amateurs, and that all poems sent in to it must be original—that is, written by the persons who send them in. No money will be paid to any person who sends a poem in under false pretense.

the horse's neck and mane. Jim was now running for his life, and squealing from pain and fear.

Two more of the bags were "jounced" out, and Rufus would gladly have jumped if he had dared. He clung to the seat with both arms; and after that fashion they went on for a quarter of a mile or more, till they came to the old Israel Blake farm, near Sheepskin Pond.

There the frightened horse turned in of its own accord. A little beyond the farmhouse stood three large barns, and in the one nearest the road two of the Blake boys, Mark and Lincoln, with three or four neighbors, sat husking corn. They had a lantern hung on the handle of a hay-fork, stuck in the mow; and the night was so warm that they had left the large barn door open. The frightened horse, squealing under the panther's nails and teeth, saw that open door and dashed in.

The boys heard a wagon coming fast through the door-yard; but before they had time even to get up, in bounded old Jim, wagon, Rufus, panther and all. The lantern was knocked off the fork-handle and extinguished.

Jim came to a standstill in a heap of corn shocks toward the farther end of the barn floor. He was still squealing; but the panther, frightened perhaps by the lantern, or by the sight of so many persons in the barn, leaped from the back of the horse to a low scaffold above the floor, and thence to the great beams of the barn.

"It's a catamount! It's a catamount!" Rufus shouted. "It's a big catamount!" He was still in the wagon. The barn was as dark as a pocket.

There were four or five cows in the "tie-up", also a yoke of oxen, and farther on two horses in stalls. Scenting the panther, the cattle began bellowing and bawling strangely, tearing at their stanchions, making such a racket that the boys could hardly hear one another. The two horses behaved in much the same way, squealing and pulling at their halters to break loose.

Farmer Blake and his wife, in the house, heard the uproar and rushed forth, calling out to know what was

The Song of the Lazy Farmer

MY NEIGHBOR says fall plowin' is the way to kill the weeds, gee whiz; you plow the ground and then they sprout, and start up, to be put to rout when winter comes and freezes dead, each weed before it seeds, instead of lettin' it come up in spring to raise a crop of seed by jing. If weeds would never go to seed then farmin' would be nice indeed, we wouldn't have to lame our back a-hoein' up them weeds; alack, the toil we waste, with muscles sore, a-hoein' weeds, when always more will grow in place of those we kill, because we let 'em seed and fill the soil with seed that sprout and grow before we can hang up our hoe. But if we just will plow in fall, them weeds ain't got no chance at all, they think it's spring, and each weed is no more than sprouted when it's friz.

My neighbor's scheme sounds good to me, some time I'll try it out and see if I can fool my weeds like this. yet on these nice fall days it is so pleasant sittin' in the shade that if I'd start to plow I'm 'fraid I'd spoil the finest time of year a-workin' all day long. I fear that neighbor missed lots of fun because he wants his plowin' done. If we'd appreciate this clime we've got to have some leisure time to sit and think and to commune with nature when she is in tune, I'd hate to spend the fall somehow, a-sittin' all day on the plow. So I'll let neighbor toil away, and do my work some other day.

IF NOSE "FILLS UP" AT NIGHT

Here's One Successful Way
To Get Welcome Relief

IF YOUR NOSE gives you a lot of trouble at night—fills up, makes breathing difficult, spoils sleep—just put a few drops of Va-tro-nol up each nostril.

RESULTS ARE SO surprisingly good because Va-tro-nol is expressly designed to relieve distress in the nose and upper throat, where transient congestion hinders free breathing. Enjoy the comfort Vicks Va-tro-nol brings... tonight!

going on.

Rufus gave warning that a catamount was in the barn. The other boys had seen nothing distinctly, and Mr. Blake was incredulous. He bade his wife fetch a lamp.

Before she returned, a cackling and squalling broke out among the hens and turkeys that, according to early farm custom, were allowed to roost on the beams, high up in the barn. One or more of the fowls came fluttering down. There was trouble up there; and as soon as a lamp was brought, Mr. Blake entered the barn.

For some time he could see nothing unusual; but soon the sharper eyes of Mark and the others who had followed in espied the reddish-brown fur and gleaming eyes of the panther, crouched on a beam, with a turkey in its mouth. Their excited exclamations soon led the farmer to see it; and perceiving now that it was, in good truth, a formidable animal, he bade all leave the barn and closed the door.

The Blakes had a gun, but there were neither buckshot nor bullets for it. The young fellows who were there husking now set off to raise help; and so they spread the alarm that in the course of two hours ten of the neighboring farmers and twice that number of boys had collected with firearms and other weapons. The doors and all other avenues of escape were barricaded, and the whole party mounted guard round the building till morning. They knew that the panther was there, for the cattle and horses continued to be very uneasy, and cackling broke out at intervals among the poultry.

Even after it grew light, some time passed before they were able to find the panther. Not a few believed that it had escaped beneath the hay bay in spite of all vigilance. Nothing could be seen of it on the beams aloft. But high up in the roof of the barn there was a narrow scaffold of loose poles, laid across the beams, on which was a quantity of rye straw and cornstalks. The animal was at last discovered, lying at its ease up there. It had apparently satisfied the stress of its hunger by devouring two turkeys.

After considerable discussion of ways and means, a long ladder was raised at the gable end of the barn, on the outside. None of these old barns were clapboarded or shingled on the walls. The wall boards, too, were often shrunken, disclosing cracks. Tyler Long climbed up the ladder, and could now see the catamount through a crack.

He enlarged the chink by prying off one end of a board with an ax, and then an old "United States piece," loaded with buckshot, was passed up to him. Tyler shot the catamount in the head at short range. It leaped headlong off the scaffold to the barn floor, causing another tremendous commotion among the cattle and horses; but it was nearly or quite dead when the great door was opened.

This panther measured eight feet from nose to tip of tail, and was the last one ever seen in Waynor.

"The weatherman says the creek is really up, Paw—this ain't no prank."

New Superior No. 7 Manure Spreader

OLIVER FARM EQUIPMENT CO. recently announced a new manure spreader called the Superior No. 7. It is claimed that this is the first manure spreader to be designed exclusively for rubber tires. The company states that it has more capacity per pound of weight and more capacity per dollar of spreader cost than any machine on the market. It draws easily, not only because of the rubber tires, but because of a self-aligning roller and bronze axle bearings and because of new features which eliminate excess weight.

The spreader is offered in three models—a four-wheel model for horses, a four-wheel model with tractor hitch, and a new two-wheel tractor model.

Recently Edward L. Fuller, President of INTERNATIONAL SALT CO., presented to Major Bowes of radio fame, a likeness of himself. There was nothing unusual about that, but it is interesting to know that the likeness in the form of a bust was carved from a 50-lb. block of compressed evaporated salt and was almost life-sized. The bust was carved by John Hovannes.

SWIFT & COMPANY of Chicago have just announced a new process in the manufacture of sausage. Months of study and experimentation in Swift Research Laboratories have developed the fact that the fresh juice of pineapples, when properly applied to the skins of sausages, will make them more tender. By the use of this new process, the natural casing of frankfurts become as tasty and tender as the meat they contain.

THE AMERICAN JERSEY CATTLE CLUB is conducting a "Jersey Jingle" contest for boys and girls. The prize is a trip to the National Dairy Show in San Francisco, October 21 to 30.

Farm boys and girls under eighteen years of age are eligible for the contest, and official rules and entry forms may be obtained by writing to the American Jersey Cattle Club, 324 West 23rd St., New York City.

Entitled "How to sharpen a hand saw," this is one of the illustrations in a 48-page booklet "The Disston Saw, Tool and File Manual," published by HENRY DISSTON SONS, INC., of Philadelphia, Pa. Unquestionably a good proportion of the saws on farms need attention be-

fore they will do a satisfactory job. The Disston Saw, Tool and File Manual, which is yours for the asking, gives clear and complete illustrated directions not only for filing all types of saws, but also

contains directions on the care and sharpening of tools found on most farms. It is a booklet that should be filed away and referred to frequently.

ALBERT J. NICOLA of Enfield, Maine, employs real Indian workmen who make baskets, which, says Mr. Nicola, are ideal for preventing bruises to apples, pears, potatoes and other crops which need to be handled carefully. The brown ash from which the baskets are made is not sawed but is pounded until the fibre loosens in the manner which Indians have always followed. The result is a basket of exceptional durability.

THE J. I. CASE CO. have just announced a new line of Flambeau red-cased tractors. The one shown in the picture is a Model D. Mr. F. A. Wirt of the Case Co., says: "Many owners have already used their L and C series Case tractors from 30,000 to 32,000 hours, the equivalent of from 30 to 32 years of use at 1,000 hours per year; but the D and DC models are even better."

Kernels, Screenings and Chaff

By H. E. BABCOCK

DAIRYMEN and poultrymen of the northeast are caught in a squeeze play. Milk and egg prices are low and always are much slower to adjust either up or down than grain prices. *Grain prices, as this is written, have been mounting daily.*

EVER-NORMAL GRANARY

For several years Secretary Wallace has been advocating an ever-normal granary. In August this granary was stocked at government expense with an estimated forty or fifty million bushels of corn. Chief arguments for the ever-normal granary have been:

(1) That it gives the nation a desirable backlog of food.

(2) That it prevents prices of big crops of cereal grains going as low as the law of supply and demand might send them.

(3) *That in years when crops are short the granary operates to hold down prices paid by consumers.*

TIME FOR ACTION

If the above arguments for the granary are sound, the time is here for its stocks to be used to keep down the prices which north-eastern poultrymen and dairy-men, many of whom are suffering from the worst drought in history, must pay for feed.

* * *

DROUGHT NOTES

In writing this page I have often been reminded that the climatic conditions under which we farm at Sunnysables are not common to all of the *American Agriculturist* territory. I know that this is true of the drought we are now suffering. However, there is enough other territory which is suffering from drought the same as we are to justify the heading I have used for these notes.

* * *

As the drought has progressed, I have wished I were more of a botanist so that I might know the names of certain weeds which seem to be resisting it especially well. It seems to me that the plant breeders of the United States might well consider starting out with some of the proven drought resistant weeds and seeing if they can't breed an edible plant which will grow well in dry weather.

* * *

Wild life, I imagine, suffers from the lack of rainfall even more than domestic animals. Have you noticed how far the woodchucks are traveling from their holes for forage? Some wise old farm dogs have got on to this situation and are cleaning up.

* * *

We are pasturing some alfalfa in a desperate attempt to furnish grazing for our livestock. From what I have heard and read I would expect that the close grazing which our alfalfa is

This is what the three years' clip of wool at Sunnysables looked like when it was loaded on a truck ready for market. It made the most valuable load of produce we ever moved off the farm.

getting will ruin it. However, I have been watching a field of alfalfa on a neighbor's farm which has been closely clipped for several years and it is still kicking through a good crop. I wonder if we have paid enough attention to alfalfa for pasture.

* * *

We have forty acres of grass seed sown to take the place of part of the seedlings killed out by dry weather. One of the fields has been in nearly a month, yet not an alfalfa or clover seed has germinated. I presume that when the rains do come and start up these seedlings they are very likely to

This picture was sent me by Arnold R. Fisher of Hamilton, N. Y. Arnold excuses his presence in the picture since the real purpose of it was to show me a Southdown ram lamb which he is trading me for some ewes. Arnold also bought some ewes from Sunnysables some time ago and seems to be coming right along with his sheep breeding operation.

G. N. Allen of Waite Farms, Washington County, N. Y., uses his pick-up baler as shown in the picture above to bale straw blown into it directly from his threshing machine. He writes, "We obtain very fine straw similar to chopped straw by operating the thresher with all concaves in place and adjusted close to the cylinder, thus tearing and shredding the straw into small pieces. The bale wires hold this fine straw with all the chaff securely enough for our needs. Two men operate the baler and arrange the bales on the wagon (not shown in the photo). The press pushes the bales up a board incline to the wagon, thus avoiding lifting the bales. It is a cheap, easy, and quick way to handle and store straw for poultry litter."

ment steps into the picture and offers its big stock of surplus corn at a fair price.

* * *

For pumping water we are working on attaching a centrifugal pump right to the frame of one of our tractors so that the tractor can be driven up to the edge of a water hole and used to pump water. As we have progressed with this idea the thought has occurred to us that what we are building is in effect a miniature fire engine.

* * *

A year or so ago we stirred up quite a controversy about whether or not farm horses should be shod. In fact, we got so many controversial letters on the subject that I believe I announced that there would be no further discussion of it. We can report, for the record, that we shoe the horses we work at Sunnysables, but don't shoe them on the Larchmont Farm. The difference is in the farms and not in the horses. The stony, gravelly soil at Sunnysables soon wears the horses' feet down, while at Larchmont a horse with ordinarily good feet can be worked indefinitely barefooted.

Incidentally, one of the best permanent pastures we ever put down was gotten by sowing some pasture grasses and wild white clover in a year old sweet clover field and letting the cattle tread the seed in. The next year the sweet clover disappeared and the wild white clover and pasture grasses made a fine growth.

* * *

Clipped pastures have been the worst disappointment this season. Not only did early clipping rob them of any reserve of feed but it seems to have put them in a condition where they dried out much more rapidly than did unclipped pastures.

* * *

Had it not been for the declaration of war and the subsequent boom in commodity prices, I feel sure that the most acceptable substitutes for hay, on the basis of their cost and nutritive value, would have been corn and molasses. Now that war has been declared, the prices of both corn and molasses are booming and appear likely to continue to do so unless the govern-

"Steady, Ella, it's the Boss's newest idea to speed up laying."

Protective SERVICE BUREAU

MEMBER
AMERICAN
AGRICULTURIST
PROTECTIVE SERVICE

Conducted by H. L. COSLINE

EVERY MORNING H. M. Carty, who answers most of the letters you folks send in, brings in the mail. We read it together and discuss ways and means of giving you the information and help for which you ask. Today there is the usual pile of mail, so let's see what problems it brings.

PICTURE ENLARGERS

Here is a letter from a Maine subscriber that tells of a visit from an agent of a picture enlarging company. As usual our subscriber was lucky and drew the envelop which entitled her to a big reduction in price. Reading a bit farther, however, we find that in this case the answer was "no". The writer is a consistent reader of this page and has read on numerous occasions about the unsatisfactory experiences many of our subscribers have had. She just wrote with the idea that we might warn you again that this lucky envelop scheme is merely a clever come-on proposition, and this note is the reminder she suggested.

CORRESPONDENCE SCHOOLS

We have come to expect at least one letter every day from someone either inquiring about a correspondence school or relating the troubles they have had. This one tells of a contract signed, of an unsuccessful attempt to cancel it, and wants to know what we suggest. Unquestionably the contract is legal, and in this case the school is one which is well recommended.

It is a case of signing before considering every angle, and much as we sympathize with our subscriber, we can't logically advise breaking a legal contract. We get plenty of letters about schools that we do not consider reliable, so we say:

"Investigate the school before you sign. Also, be as sure as you humanly can that you will have the money to pay for the course and that you have the ability to profit by it."

Again we say that no school can guarantee a job, and if an agent makes that guarantee, that in itself is sufficient to view the whole proposition with suspicion.

REGISTRATION PAPERS

The next letter comes from New Hampshire, and tells of sheep purchased and paid for as purebreds, but up to date the registration papers have not been forthcoming. We will try to straighten that out. I think it is a good practice to refuse to pay full price for any registered animal until you have the papers in your possession. While purebred associations have no legal authority to enter into a matter of this sort, they are in many cases able and willing to bring some pressure to bear to get them. In my opinion if papers are not available, our subscriber is morally entitled to a refund of part of the purchase price.

TRESPASSING

"A car pulled up beside the road. Three people got out and proceeded to pick several quarts of berries," writes the next subscriber. "I am getting tired of this sort of business."

Prompt action is important if you have a similar experience. If your state has State Police, and a majority of northeastern states do, I would suggest that you ask the telephone operator to get you in touch with them and report the case to them immediately. Then I would get the license number of the car so the trespassers can be traced. There has been a satisfying disposition on the part of judges to bear down on this type of offender re-

cently, and a few arrests and fines will go a long way toward increasing the respect for the rights of private property among the general public.

POSTING PROPERTY

"My father's farm and mine join," writes a New York State reader. "Can we post the two farms as one, or must we post them separately?"

The New York State law makes no provision for posting two or more farms as one. It specifically reads that each farm must be posted with signs at least 11" square, with reading matter occupying at least 80 sq. in. of space. A sign must be posted at the corners of each farm and at distances not greater than 40 rods along the boundary of the farm. Each sign must contain the name and address of the owner.

Therefore, it will be necessary to post each of these farms separately. It is important to post property strictly in accordance with the law. Otherwise, the trespasser may plead as a defense that the farm was illegally posted, and unfortunately he will get off.

REWARDS

Next are two letters claiming one of our \$25 fraud rewards. The first one, unfortunately, does not meet our regulations. In the first place, the offense was theft and not fraud; and in the second place, the man did not actually serve thirty days in jail.

The next letter comes from W. R. Reynolds, Whitesville, N. Y. This one does meet the requirements, and a check for \$25 will be made out today. It involves a protested check, and we have ruled that giving a check without sufficient money in the bank to cover it constitutes fraud. Interestingly enough, the inability of the man who gave the check to make it good won \$25 for the subscriber. The judge's sentence was twenty days in jail and the making good of the \$10 check. Failure to make it good resulted in ten more days in jail, which just met our requirement that the man actually serve a sentence of thirty days.

PATENT MEDICINES

What is this? An inquiry about a remedy which our subscriber saw advertised. In general, we know the answer because the disease suspected is one which should be diagnosed by a physician. As usual, we will check with the American Medical Association, but the answer will be disappointing to our reader.

No one will ever know with certainty how many people have had their lives shortened by pinning their hopes on some nostrum, thereby delaying a trip to their physician until it is too late.

This is by no means the end of the pile, but it is all I can tell you about this time. I just want to emphasize that we are anxious at all times to serve you. We don't guarantee results—in fact, we consider the man who does as worth looking into. But whether we are successful or whether we fail, there is no cost to you, so don't hesitate to tell us your problem.

* * *

A young married couple living in Lewis County, New York, are looking for a permanent position on a farm. They have lived most of their lives on a farm and know all about farm work and have three children. If you are interested in getting in touch with this couple, write to Box F, American Agriculturist, Ithaca, New York, and we will forward your letter to them.

ROBERT C. THOMPSON, FABIUS, N. Y.

STANDING on the highway between two parked cars Mr. Thompson's right arm was severely lacerated by the door handle of a third car that sideswiped them. He was totally disabled for six weeks and writes us saying: "I have your check in full settlement of my claim and appreciate the way you handled it."

WAR STRIKES CLOSE AT HOME

An Important Message to G.L.F. Patrons

THE EUROPEAN WAR has already had its effect on grain and feed prices. Everybody is anxious to own stocks of grain and feed. Nobody wants to sell.

Orders for G.L.F. feeds are piling up, even with the mills running at capacity.

Many ingredients have been temporarily withdrawn from the market; others are offered only at \$8.00, \$10.00, and even \$15.00 higher than two weeks ago. In the face of such tremendous speculative demand, grain processors have been forced either to withdraw from the market or to ask what may prove to be abnormally high prices for bran, distillers grains, middlings, and other by-products.

It may be days, possibly weeks, before true values can be determined—probably at higher than mid-summer levels, but almost certainly not as high as today's asking prices. Doubtless by that time the marketing efforts of dairymen in the New York Milkshed will bring the milk price into better relationship with feed costs.

Meanwhile, the management of G.L.F. accepts the responsibility of doing everything possible to protect established G.L.F. patrons against the effects of present chaotic market conditions.

War Emergency Exchange Dairy

To established patrons only, G.L.F. now makes available a new 20% dairy feed, simple in formula, using as far as possible natural grains and other ingredients still plentiful in supply, and ingredients which G.L.F.

had already contracted for. The present formula is shown below:

WAR EMERGENCY EXCHANGE DAIRY

600 lbs.--Corn Gluten Feed
180 lbs.--41% Protein Cottonseed Meal—Prime Quality
200 lbs.--41% Protein Soybean Oil Meal
300 lbs.--Wheat Bran
400 lbs.--Corn Meal
100 lbs.--Ground Barley
180 lbs.--Cane Molasses
20 lbs.--Steamed Bone Meal
20 lbs.--Salt

2000 lbs.

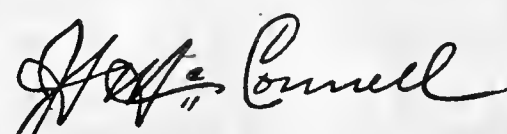

1482 lbs.--Total Digestible Nutrients

Protein . . . (minimum) 20.00%
Fat (minimum) 3.00%
Fiber (maximum) 10.00%

Digestible Protein . . . 17.20%

This formula is designed to avoid some of the by-products made in lesser volume and therefore more tightly held.

This is an announcement of a service to established patrons of Cooperative G.L.F. Exchange, Inc., as defined above. It is not to be construed as an offer of feed for sale.

GENERAL MANAGER

For Established Patrons Only

Up to and including September 16, War Emergency Exchange Dairy will be available to established G.L.F. patrons in the Rochester-Syracuse rate zone at \$30.00 per ton, cash-off-car, in 100# bags. Prices in other rate zones will be higher or lower according to delivery point. The price may have to be revised the following week.

An established G.L.F. patron is one who has received or is entitled to receive a patronage dividend on his purchases of dairy feed during the past year.

Such patrons will be able to purchase enough War Emergency Exchange Dairy to take care of their current weekly needs as soon as supplies can be shipped.

War Emergency Exchange Dairy is not offered for sale to the general public. The regular G.L.F. dairy feeds—Milkmaker, Exchange Dairy, Legume Dairy, the Super feeds, and the Cow feeds—are still available and are priced on the basis of day-to-day markets.

Watch For Announcements

Making War Emergency Exchange Dairy available is the first step in carrying out the G.L.F. policy of protecting the interests of established patrons. Further steps will be taken and announced as the situation develops. Watch for them on this page.

MARKETS for America

By

L. J. TABER

MASTER OF THE
NATIONAL GRANGE

THE FARMER today finds himself in the midst of one of the great periods of change in the world's history. Mechanical equipment, scientific information, improved transportation, mass production and similar problems affect the open country. Once, most of the farmer's markets were near at hand; today they may be a thousand or more miles away. New developments, like the quick freezing of fruits, modern methods of canning, preserving, refrigeration and standardization, all affect the farmer and his products. Just as the marvel of the radio is revolutionizing the thinking of both country and town, so modern industrial life and the machine age, science, and education are bringing the farmers of this nation face to face with one of the greatest challenges of all the years.

While the problems of agriculture are acute, the most outstanding question after all can be summed up in the one word "Markets". If we could assure the farmers of the nation, markets for the things they grow, markets for the possibilities ahead, markets for the energy and enthusiasm of the youth of the country, markets for the skill of agriculture, a great age of rural development would await us.

Agriculture dare not be selfish, however. Markets for the muscle of the men who toil, and markets for the products of industry are equally important. Also, there must be an opportunity to use the brains, the experience, and resources of our land. Now, when banks bulge with money, there must be markets for

EDITOR'S NOTE:

One of the big events in northeastern agriculture and in rural life each year is the Northeastern-New York Grange Rally and picnic, held on the farm of Assemblyman Maurice Whitney, at Berlin, N. Y. This year the date of the big rally was August 2nd, and the speaker of the day was National Grange Master L. J. Taber. In his talk, "Markets for America", Worthy Master Taber said so many things of vital interest to farmers that we asked his permission to print it for the benefit of every reader of *American Agriculturist*.

as much last year, leaving out governmental costs and wars past, present, and prospective, as did the five hundred million people in Europe, or the more than a billion people in the Orient.

The Home Market is the only market and the best market for many things that the farmer has to sell.

As we face a changed economy of soil conservation and balanced production, we create

entirely new questions in the problem of imports into our land. We cannot restrict or deny the right of the American farmer to produce, unless at the same time we assure him the right to the markets nearest at hand. I repeat that it is neither good economics, good patriotism, good arithmetic, nor good agriculture for that matter, to deny the production of commodities in the United States and permit the importation of that same commodity from abroad. The Home Market must mean vastly more than just the right to produce for our own people. It must mean efficient and low-cost production, efficient processing, and economical and reasonable distribution. It means more than this. We must have a consuming public that has both the desire and the resources with which to buy.

The Home Market is not enough to take care of the expanding agriculture that is ours. We must open up new markets for the abundance from the farm. We must find not only new plants and new crops, but new methods, and new ways to use the produce now grown, as well as the crops that can be produced in the future. We must put effort and energy into this program of new crops and uses.

And when we do, we will open new and vast avenues for employment.

This is the greatest agricultural pioneering challenge in thousands of years. Man has slowly moved from the fertile valleys of the East ever westward in search of new fertility and new natural resources. This march is over, and in its place comes the unending march forward on conserving the soil, rebuilding its fertility, restoring the wild life, improving the flora and fauna of our land, and, at the same time, gathering new plants and new crops from the four corners of the world and planting them somewhere in the vast diversified domain of our Republic. (Turn to Page 7)

"We must go forward in human relationships and better marketing methods in exploring the pathway to gain a happier rural living."

—Photo courtesy of Philip Gendreau, N. Y.

capital if the nation is to prosper. It is time to relearn the lesson that property honestly acquired is but labor in stored-up form. Property must enjoy some wages along with brains and muscle.

Our greatest need is simply MARKETS FOR AMERICA and on that challenge, I want all to ponder on the privileges and opportunities that are ours.

Markets divide themselves into three great heads, namely, the Home Market, New Markets and Foreign Markets. It cannot be said too often that the greatest and best market in the world is that of the hundred and thirty million people in the United States who spent

WAR WILL RUIN OUR DEMOCRACY—SEE PAGE 4.

NORTHEASTERN *Slants* ON THE *National* NEWS

■ Congress Back in Washington

THEIR vacation cut short by European War, Congressmen are back at their desks in Washington to consider changing Neutrality law. Present law forbids sale of American arms, ammunition and implements of war—chiefly airplanes—to warring nations, though it permits American ships to carry all other goods into belligerent ports. Administration wants arms embargo lifted, and sale of arms and other goods to belligerents put on cash-and-carry basis.

"Peace bloc" of Senators (called "ostrich bloc" by one commentator) have announced that they will fight against lifting arms embargo. They argue that such a change would be an

to enter waters near zone of combat, even if ship is bound to some neutral port. It is pointed out that these restrictions would get rid of present danger to our ships, some of which have already been stopped and searched by British and German ships, both of those countries having published contraband lists and asserted their right to stop ships carrying that trade on the high seas, and to search and even sink them if they attempt to evade search.

■ War and the Farmer

FIRST effect of war on northeastern dairymen and poultrymen was skyrocketing prices of purchased feed, followed by increases in some things they have to sell. From August 31 to

Good Milk Prices Assured for All Winter

WE stopped the presses at the beginning of the run to announce **BEST NEWS FOR NEW YORK MILK SHED DAIRYMEN IN A LONG TIME. LONG DISTANCE TELEPHONE CALL FROM ALBANY SHOWS NEW YORK STATE MILK ORDER AMENDMENT WON BY A TOTAL OF OVER 97%.**

A total of 27,963 votes were cast. Of these, milk marketing cooperatives voted a total of 23,296. 823 votes could not be counted for various reasons such as being received too late, bearing no signature, etc., but even these 823 rejected votes were mostly in favor of the order. A total of 3,849 votes were cast by individual dairymen in favor of the amendment, while only 768 individual dairymen voted against the amendment. A total of 33,000 ballots were mailed to individual producers.

Commissioner Holton V. Noyes has signed the New York State order, to become effective October 1, putting the amendment into effect. This report does not include the thousands of voters outside of New York State who will be counted in the Federal amendment. But it is expected that the favorable vote on the Federal amendment, including all states in the Milk Shed, will be fully as large as it was on the New York State amendment, and, therefore, dairymen can count on higher prices for milk after October 1.

THEY CAN BE ASSURED, ALSO, THAT THESE PRICES WILL CONTINUE DURING THE ENTIRE WINTER. There is no reason, if evidence proves that these better prices are still too low and too far under the cost of production, why they cannot be again amended and raised to where they should be.

We predict that when the dairymen begin to feel the effect of these better prices we are going to see a more peaceful and happy situation in the New York Milk Shed.

unfriendly act to Germany, and might eventually draw us into the conflict. (Germany would not be able to take advantage of cash-and-carry system because of Britain's powerful navy which controls the seas.)

Those in favor of cash-and-carry system say that present law is not neutral in its effect, because it deprives Great Britain of advantage to be gained from its huge fleet and control of the seas, which would enable it to buy in American market. Chief argument in favor of cash-and-carry system is that it would take American ships out of danger zones. Administration advisers point to losses of American vessels and American lives caused by submarines early in World War, which finally led U. S. to declare war on Germany.

Under Administration cash-and-carry plan, all types of exports would be permitted, but belligerent nations who bought from us would have to "come and get it." No American ships would be permitted to carry goods to warring nations. In addition, Secretary of State Hull favors giving President authority to forbid American ships

September 19 grain prices jumped between 19 and 39 per cent, potatoes 20 per cent, eggs 12 per cent, butter 16 per cent, livestock from 1 to 18 per cent, lard 54 per cent, sugar 13 per cent, and flour 2 per cent. These are net gains following some drop from the high point. Much of rapid price gain was result of hysteria and speculation.

Washington is concerned over rapid rise. Seems inclined to put on brakes to prevent runaway, but with little or no pressure to keep down prices of farm products.

SLANT: The fact is, farm product prices have been too low relative to supplies farmers must buy. There should be some increase. War always has brought higher prices. There is no reason to expect different situation now. But remember that in general, U. S. crops are excellent, and Europe is reported in better shape for food than in 1914. In laying plans remember, too, the headaches that follow war. Next year or two looks like excellent time to keep out of debt or to reduce debts. U. S. Department of

Agriculture has warned against big increase in production due to hope for high prices, and in light of events since last World War, this looks like excellent advice.

■ Nazis and Reds Divide Poland

SINCE first Sunday of this month, when Britain and France declared war on Germany in fulfillment of their pledge to aid Poland, events have moved swiftly. Poland, though fighting desperately to save her independence, has been quickly overrun by Nazi war machine. Her defeat became practically complete on Sept. 17, when troops of Soviet Russia's vast Red Army poured into her back door to grab their share of spoils of Germany's victory.

They came, said the Russians, to "protect" Ukrainians and White Russians in eastern and southern Poland. (When Poland was recreated after World War, 101,196 square miles of former Russian territory was included in it. Much of this territory was won by Poles after bitter Polish-Soviet warfare, which ended in 1920).

Germans and Russians, former enemies but now best of friends since their recent non-aggression and trade pact, have fixed a line in Poland beyond which their armies will not trespass on each other. Report is that best that Poland can now hope for (unless France and Britain eventually win this war) is to become a small buffer state, stripped of most of her territory and independence, between Germany and Russia.

Speaking at Danzig on Sept. 19. German Chancellor Adolph Hitler served notice on Britain and France that Poland, as created by Versailles Treaty, "will never rise again," and that Germany and Russia are masters in eastern Europe. Claiming that he had no "war aim" against Britain or France, Hitler offered the democracies peace on his terms, or a finish fight. Reaction in Britain and France to Hitler's speech was that it did not change situation, nor increase their belief in his good faith or in Germany's ability to wage a long war.

Meantime, on Western front, British and French troops are massed along German-French border, but comparatively little important action there has been reported. Bitterest warfare is on high seas, where British ships and German submarines are sinking each other as fast as possible. Worst blow to Britain since sinking of passenger ship *Athenia* on Sept. 3, was loss of British aircraft carrier *Courageous*, torpedoed by German U-boat on Sept. 19. Over 500 persons were lost.

■ Brief Farm Notes

NEW SEED LAW

New Federal law to protect farmers against fraud and deception in buying farm seeds forbids false labeling, and importation and shipment of seed containing noxious weeds. Law requires plain labeling of seeds shipped in interstate commerce, with statement about their germinating qualities, amount and kinds of weed seeds present, and point of origin.

Seeds produced by farmers on their own farms and sold directly to consumers do not come under some provisions of new law, provided seller is not engaged in business of selling seeds not produced by him, and also on condition that product complies with seed laws of state in which the seed is sold.

COWS TO FINANCE RESEARCH

Each Washington State cow is to be taxed from 25 cents to 75 cents a year, depending on how much butterfat she can produce. Money will be used to

I Am An American

WHEN I hear the roar of an airplane overhead I do not run for cover in the fear that it may be an enemy bomber.

When my wife goes to the grocers she can buy as much food as I can pay for, and not just so much of what the government says we can eat.

The fall shopping list for my family includes no item of gas masks all around.

My newspaper is as nearly truthful about conditions at home and abroad as it possibly can be, and my government does not tell it what it may print and what it may not print to keep me in ignorance.

I may belong to Rotary and as many other organizations and clubs as I wish to or have time and money to.

When I get my mail I know that it has not been opened and read by government agents, and I am sure that the government has not tapped my telephone line.

I do not have to keep registered with the police, and I am free to move my office and my residence as I choose. The only identification cards I carry, I carry voluntarily in case of accident.

I may belong to any political party I want to, and I can criticize it, its leaders, or any other political party without being sent to a concentration camp or a firing squad.

I can talk freely to my friends, or even to strangers, about any subject at all, without fear of arrest.

I can worship God in my own way without having a government tell me whether I can or not, and how it must be done.

I think of those in other lands as international neighbors, rather than foreign enemies, and I shall not be jailed for the thought.

In short—I am an American, the heir to many priceless privileges which I shall try to preserve for my children and my children's children.

—Ithaca Rotary Club News.

finance newly created Washington State Dairy Commission which, through intensive research, plans to discover new uses for surplus dairy products. Commission estimates that about \$60,000 a year will be raised through State's new one-mill tax on 60,000,000 pounds of butterfat. Creameries and distributors will collect this tax from milk and cream producers and will turn it into State Treasury.

HELPED TO RESEED

More than 29,000 farmers in drought sections of Northeast took advantage of free grass seed for reseeding purposes on more than 200,000 acres. Such seed has been supplied only for reseeding in cases where seedlings made last Spring were destroyed. Cost of seed has been paid by U. S. Department of Agriculture. It is expected that this reseeding program will do much to increase supplies of hay and forage next year and to protect soil from erosion this winter.

Good Books to Read

THE SACRED FALLS, Mark Channing. A novel of India, interpreting in fiction form the drama of life in a small Indian village near the Himalayas. This book mirrors the daily life of the simple Indian village community, and quietly, powerfully, tells a simple truth that is universal.—J. B. Lippincott Company, Philadelphia, Pa. \$2.50.

Grange GLEANINGS

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange.

NO PHASE of the Grange work of the nation is more interesting or of more practical worth than the establishment in recent years of scholarship funds, contributed by Granges and Grange members, and designed to aid young people in obtaining a higher education than the public schools af-

ford. From such funds loans are made to Grange young people on low interest terms and with easy payment arrangement after the graduate has found employment. Massachusetts was the leader in this movement, establishing its Educational Aid Fund in 1911, which has now grown to almost \$125,000. Since that time 16 other states have created similar funds, in some of which decided magnitude has been attained and out of all of which hundreds of deserving young people have been able to obtain an educational equipment for themselves otherwise impossible.

The total of all these scholarship funds in the 17 states is \$285,000, and several of the states and the present amount of their funds are as follows: Massachusetts, \$125,000, besides the interest on an \$11,000 endowment; New York, \$70,000; Vermont, \$13,600;

Maine, \$10,000; Connecticut, \$7100; Rhode Island, \$5400; New Hampshire, \$5300; Delaware, \$2500; Pennsylvania, \$2500, plus income from \$14,000 endowment.

* * *

MAINE'S "grand young man" of the Grange, Charles H. George of South Paris, reached his 105th birthday on Sunday, September 3, and the occasion was quietly observed. Beyond all possibility of challenge Mr. George is the oldest Grange member in the world and retains his mental and physical faculties to a remarkable extent.

* * *

IN VERMONT, closely-organized as it is, the Grange field is not fully covered for a new unit has just been instituted in Essex county, named Grange-Victory, No. 537, with a good charter list and a very promising start. The

organizer was E. M. Farr of Chester, chairman of the executive committee of the Vermont State Grange.

* * *

MELLENVILLE GRANGE in Columbia County, N. Y., presented at a recent meeting, a program entitled "The March of Time". It interestingly typified the respective advances in civilization made during the 17th, 18th and 19th centuries. A brief summary of historical events was accompanied by vocal and piano illustrations of the development of American music — all providing a most instructive entertainment hour.

War Will Ruin Our Democracy

THIS DAY I ate lunch with a man who served as an aviator in the World War, and we talked of the ruin that is again sweeping Europe after only a brief 25 years since the last holocaust began. We commented on the news that both the Russian and German soldiers are on Polish soil, that Poland is defeated and ruined, and that now German soldiers by the tens of thousands are being transferred to the western front to meet the armies of the European democracies, Britain and France. Then, with terrible earnestness, my friend said to me:

"Whatever happens, America must keep out of this conflict. We who took part in the other one know how much we paid, and that nothing, absolutely nothing, was gained. By the grace of God I happened to return with a whole skin, but many of my comrades did not, and the lives of many of those who did come back were ruined. And think of the suffering of our parents, who every morning picked up the newspaper, and with trembling hands looked at the casualty lists to see if our names were there!"

My friend is right. It is doubtful if America could survive actual participation in another war without a revolution here. We have been on the verge of one for the last ten years, as a result of the first world war. Our national debt has increased from \$16,000,000,000 to \$40,000,000,000 since 1930. The ultimate cost of the first world war will run well over \$100,000,000,000. What man with any sense would dare add on to those ruinous figures the cost of another war?

But suppose we lay all selfishness aside, and think unselfishly of the future civilization of the people of the entire world. If America enters this conflict and is ruined thereby, as she very likely would be, who will then carry forward the torch

One of the finest things in life is the ability to grow old gracefully, the ability to travel with and not against the years. Here are two women who have done it. They are twins, Mrs. Carolina Comstock and Mrs. Catherine King, of Randolph Center, Vermont, who on October 11 will celebrate their 89th birthday. They were born in 1850. Each raised a family of children, took an active and responsible position in life, and both were, the last time we heard a few weeks ago, perfectly well and spry. Both are church members and Grangers.

Not all successful people live in palaces or hold high positions!

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR FARM PRODUCTS.
3. LOWER FARM TAXES.
4. A GOOD LIVING FOR EVERY FARM FAMILY.
5. MORE FUN ON THE FARM.

of democracy? Colonel Lindbergh, who knows Europe backwards and forwards, well expressed the truth in a recent speech, when he said:

"If we enter the war fighting for democracy abroad, we may end by losing it at home."

Some men who ought to know say we will be in this conflict by January. Our ships may be attacked, property abroad destroyed, and American lives lost, with the result that war hysteria will sweep the land.

We must prevent this. We must let stern reason rule unstable and unwise emotion. We must be sure that every one of our representatives, Congressmen and Senators in Congress, and every one of the high officials of the Federal government, know that we, the American people, will hold any and every politician personally responsible who for personal power or glory, or for any other reason, has any part in leading America into war.

Congress is going into special session. Write your representatives and senators today.

Would Make the State a Gambling Partner

VOTERS of the State of New York at the November elections this fall will be asked to approve or disapprove a race track gambling amendment to the New York State Constitution.

This amendment is known as the Pari-mutuel Amendment. It legalizes race track gambling, makes the State a partner with those who gamble by providing that 3 per cent of the betting goes to the States as taxes.

Several of the states who have tried this scheme have repealed it. Ex-Governor Cross of Connecticut, in vetoing a similar bill, said:

"It appears to be primarily a mechanized gambling scheme on a large scale for exploiting all classes of people, the poor as well as the rich, for the benefit of the few, with the state as a partner. From no point of view would the bill, if enacted into law, be conducive in my opinion to the moral or economic welfare of the people. It may well prove to be disastrous."

Voters will follow their own judgment and conscience in this matter, but personally I shall vote a great big "No."

Some Hints for Better Apple Prices

NORTHEAST fruit growers, in fact fruit growers throughout America, are blessed this fall with a splendid crop of apples and other fruits. The size of the blessing will depend upon what that fruit can be sold for. We can be sure that apples could be sold for much more than they

will bring had more growers contributed to and supported advertising and educational efforts to increase consumption such as those made by the New York-New England Apple Institute.

Citrus fruits have in some measure replaced apples in recent years, not because oranges and grapefruit are better than apples, but because the consumer *thinks* they are, and because consumer demand has been built up tremendously through advertising.

Porter R. Taylor, chief of General Crop Section of the Agricultural Adjustment Administration, in a recent speech to the International Apple Association convention, summarized the following important steps which growers might take individually to get better apple prices:

1. Market U. S. No. 1 and commercial grades in fresh fruit channels.
2. Consider carefully whether it will pay to pack and sell utility grade and undesirable sizes of varieties which will be difficult to market.
3. Keep cull fruit and utility grade of undesirable varieties out of fresh market channels and dispose of them in by-product outlets.
4. Place only the better grades, sizes and varieties in cold storage so that the storage volume may not exceed that of last season (31,000,000 bushels) or preferably less, as common storage stocks may be expected to exceed those from the 1938 crop.

5. Keep good quality fruit of seasonable varieties moving into consumption from the beginning of the season. This is important because of the abundance of fall varieties.

6. Remember that competition with citrus fruit will be as great as last season and that apples can be marketed more readily during the fall months than after the first of the year, when citrus supplies may be expected to be more liberal.

A Nation is made great not by its fruitful acres, but by the MEN THAT CULTIVATE THEM; not by its great forests, but by the MEN WHO USE THEM. America was a great LAND when Columbus discovered it. AMERICANS have made it a great NATION.—Lyman Abbott.

Eastman's Chestnut

BACK in the good old days, according to my friend, William T. Vann of Ithaca, a New England Yankee storekeeper put a placard in his window reading:

"A drink with every trade."

Soon another Yankee came down the road, entered the store, and the following conversation ensued:

Yankee: "How much are eggs?"

Storekeeper: "One cent."

Yankee: "Here's an egg. Give me a darning needle."

The trade was made, and the storekeeper was going about his business, when the customer said:

"Haint you forgot something? Read your own sign. It promises a drink with every trade."

Storekeeper: "Oh! all right." Pours him a drink.

Yankee: "Always take an egg with my drink."

Storekeeper: "Well, I'll be darned! All right, here goes."

Breaks the Yankee's egg into the glass. The egg proved to be a double-yolked one.

Yankee: (In some excitement). "Do you see that? Now you owe me another darning needle."

OUR READERS . . . Wrote this PAGE

TAKING THE EDITOR FOR A "RIDE"

COMPLIMENTS for your fine article, "By Gorry, We've Got 'em!—Aroostook County Potato Empire." The *American Agriculturist* is excellent. BUT—may I ask just where is the State of MAINE? Is it North or South of the 49th parallel which forms the boundary of western U.S.A. and Canada??!!

You write, "I doubt if even Maine folks realize how far North they are." True! You were the only one! You must have lost your sense of direction up among those acres of potatoes. Look at the map once, yourself. I had gathered the idea that the map changers were mostly in Europe, but here we find one right in good old New York State! Well, congratulations anyhow. You've succeeded in pushing northeastern United States farther north than old Dan Webster and all the hard boiled Yankees were ever able to do.

—M. T., New York.

(EDITOR'S NOTE: Just a fool mistake! Editors can make them, you know.)

CASH FROM SWAMPS

WITH DEMAND for barrels increasing, the flag cutting industry has transformed the vast swamp areas of central and western New York into scenes of bustling activity. The cutting of flag begins along the shores of Cayuga Lake and the Seneca river and in the Montezuma marshes about October 1, and gives employment to several hundred workmen.

Under rulings of the state department of public works, cutting of flag on all state land is prohibited until on and after September 25. This ruling became effective several years ago. Flag dealers have agreed not to buy any flag cut before that date, which permits the flag to attain better growth for use in making barrels, chairs and kegs. The narrow flat leaves of the cattail contain a natural glue and are used in calking barrels. When pressure is applied to seal the barrels, the leaves between the staves adhere throughout its life.

Using a corn knife to cut the stalks, the worker threads his way into the mazes of swamp, walking carefully to avoid deep holes. When the harvester has finished his cutting for the day, he retraces his steps, gathering and bundling the flag as he returns.

The cattail patches are cared for as carefully as a garden. When the season's harvest is over, the marsh is fired to burn down the small stalks so that they will not interfere with the next cutting.—P. B. Oakley, Geneva, N. Y.

A FALSE ECONOMY

VERY OFTEN when we try to be economical and make the hard earned dollar go as far as possible, we just squander money because we do not know the value of the things we buy.

For example, when the dairy farmer buys oleo, he gets an inferior substitute not worth half of the price he pays for it. And for every pound of oleo he buys, he takes away the market for 25 pounds of his own milk, which is worth much more to him than the few pennies he thinks he is saving. How can he expect to get a living price for his milk?

When city consumers pay 18 cents

for a pound of oleo, they are paying 62 cents for the same food value they get in one pound of butter that they can buy for 27 cents. There is no economy or saving in that. They only fool their own stomach.

How can we expect business to pick up as long as consumption of substitutes is as general as it is now?

Business lags because the farmers

When the planting was finished, we set a stake at each of the four corners, and halfway between, on all four sides.

We always let the plants develop a good root system and become thoroughly acclimated to their surroundings. In about three weeks we stretch open-mesh burlap over the celery bed, fastening it to the stakes with safety pins, through the staples and allowing

The harvesting and selling of flag is a big industry among farmers in northern Seneca County (N. Y.) along the low lands of Cayuga Lake. Vast swamp areas will soon be turned into scenes of bustling activity. See letter on this page, entitled "Cash from Swamps".

who are producers of new wealth have no money to buy what the city man produces. As human beings we are interdependent upon one another. The daily lives of the city dwellers are decidedly more dependent upon each other than any of us are on the tree climbers of the South Sea Islands who gather the raw material for oleo. Why constantly insist on saving a penny when in so doing we actually throw away dollars?

We farmers need the city man's market for our products, and the city man needs the farmer's market for his products. So let us cooperate with one another. When the city man buys the farmer's butter and cheese freely, we will have money to buy the city man's products and we will all prosper.

If we can keep these facts before the public for three months, the 100,000,000 pounds of butter now in cold storage will be consumed and the dairy industry relieved of its surplus.—J. A., N. Y.

BLEACHING CELERY UNDER BURLAP

MY FAMILY are very fond of celery, but no one wanted the job of banking it for bleaching; the result was we had very little home grown celery. One cold winter day in 1935 I had a bright idea, so when planting time came we put the idea into practice. After three successful seasons I am going to pass my plan on to the readers of *American Agriculturist*.

We decided to set out one hundred plants, so after the ground was prepared we marked off a plot five feet each way. Then we selected nine stout stakes, about thirty-eight inches in length; in the top of each we drove a small wire staple. Before we began planting we set one stake in the middle of the plot.

Beginning at one corner we set the plants six inches apart each way, until the one hundred plants were set.

the burlap to drop down around the sides of the bed.

The celery grows tall, because it seeks the light which comes through the burlap. Each head helps to bleach those around it, and the burlap, which drops down on the sides bleaches the outside rows.

The burlap is easily removed for weeding and sprinkling, or to take advantage of a good rain.—E. A. Wallenbeck.

A. A. COOKING SCHOOL HELPED HER

I WOULD like your staff to know that it was the help received from the cooking school, which you conducted in the columns of *American Agriculturist* last winter, that enabled me to place second in the state (New Hampshire) in the Egg Meal Menu recently sponsored by the Poultry Growers Association. So you see I gained many things from

This is "Toy", not Ferdinand the bull, and his name is made up of the first letters of his youthful owners' names—Peggy M. Taylor, center; Donald K. Overend, left, and Frances J. Young, all Niagara County (N. Y.) 4-H Club members. To them goes the honor and distinction of starting the first 4-H Club Ayrshire bull ring in Western New York, perhaps the entire state. "Toy's" real registered name is Glen Campbell's Oasis, and he hails from Canada, being only a couple of generations removed from the famous Scottish "Oases", if you know what we mean. The 4-H Club trio purchased him each on a one-third ownership basis to build up their Ayrshire herds, and will take turns in stabling him.

ENJOYS STEPHENS' STORIES

WHEN the A.A. comes, I look first to see if there is anything from the pen of my old (he is not quite as old as I, at that) college friend, Jared Van Wagenen, Jr., read Eastman's Chestnut, then read C. A. Stephens' story. The story, "Hudson Maxim's First Fight," was an interesting tale, and as I read it, I noticed the title of the book Maxim was selling. Immediately I went into my library and took from its place a large leather-bound book of eight hundred pages "The Polar and Tropical Worlds," printed in the early 70's, the author Dr. D. Hartwig.

This book was in a barrel of books I bought at an auction and has this book plate in the blank covers:

"Fred F. Livermore, Prairie Township, Wyandotte Co., Kansas."

Livermore was born in Vermont, went to Kansas, took up land, when it got high in price, sold it, came back to his native town, and died a few years ago.

Also, I got a map of Maine, found Kent's Hill, Wayne, and East Livermore, noted the distances, and feel that the story was, what the note said, absolutely true.

When you see Jared, you may tell him I wait somewhat impatiently for his articles.—H. J. H.

LIBERTY APPRECIATED

I WAS particularly pleased to read the editorial "Liberty—Our Sheet Anchor." I hope this is a true story and that it was carried out. Every foreigner not pleased with this country and not obeying its laws should be deported. Our ancestors fought, prayed and worked to make this a country of freedom, and everyone living here today should have gratitude in their hearts. It is the greatest country on earth. If these dissatisfied ones cannot live in harmony with us, they should be deported. If this is not done, we can look for utter destruction. I wish someone young and strong could make this their aim in life to bring about an awakening on this subject. You have a great paper.

—Mrs. E. L. B.

* * *

LUCKY DAY

WE LIKE the helpful suggestions in the paper, other farmers' views of life, and always the articles by Paul Work. The little poems always inspire one, too. The whole paper is a splendid farm paper, and I'm very glad we take it, as are all my family. I heard of it through a stranger, and consider that as one of my lucky days.—Mrs. L. D. C.

"Isn't it a fact—"

RABBITS

NEW ZEALAND WHITE RABBITS. 8-12 mo., weight 8-10 lbs., \$2. **JOHN PARRY, CAMDEN, NEW YORK.**

Loading the truck of a potato buyer at the farm of Ernest Bowman, Evans Mills, Jefferson County, N. Y. Mr. Bowman has a storage capacity for 20,000 bushels, but he believes in selling when he has a buyer rather than holding them all for a possible better price.

Potato Prices Up

MANY potato growers expected that the September crop estimate for potatoes would be lower than the August 1 estimate. Such was not the case. The latest estimate put the total U. S. crop at 364,208,000 bushels, an increase of 7,374,000 bushels over the August 1 figure.

The State of Maine is the important exception to the general trend of good potato growing conditions during August. The September 1 outlook for Maine was for production of 47,600,000 bushels, compared with the August 1 estimate of 49,300,000 bushels; and for all New England the September 1 estimate was 56,833,000 bushels, as compared to the outlook for 58,355,000 bushels a month earlier.

One crop commentator guesses that Maine is likely to ship potatoes in heavier volume than usual during fall months, especially if the market holds

its present strength. Should prices drop, more of the Maine crop will move into storage.

The biggest improvement in potato crop prospects were in the midwestern states. Both Michigan and Wisconsin report increases over the August estimate, with Minnesota, North Dakota and Nebraska remaining about the same.

Probably the September 1 estimate will have relatively little effect on the market. The crop is still below average, demand seems to be good, and commodity prices in general are climbing.

Recent potato prices in the country were quoted as high as \$1.65 per cwt., and then slid off from 10 to 15c. One result of better prices was to start New Jersey and Long Island potatoes to market where growers had not been anxious to sell at prices that prevailed earlier in the season.

Apples Promise Bumper Crop

For apples, the September 1 estimate showed a slight but unimportant increase over the August 1 figure. In general, there were some decreases on probable crops in western states, which were slightly more than offset by increases in eastern and central states.

The September 1 estimate for the commercial crop, which is defined as that part of the total crop sold or to be sold for fresh consumption, is 103,260,000 bushels. Some uncertainty is injected into the situation by the dropping from crop estimates of the total apple crop, a figure which has been given in previous years. The commercial crop, as defined, is to some extent influenced by demand as well as supply. Here are some comments for leading varieties:

BALDWINS are reported to be about half a crop in New York and New England, while the prospects for that variety are good in Michigan and Indiana.

DELICIOUS are light in most states compared with prospects for other leading varieties. Production of that variety is lighter than last year in Washington and Idaho and in most eastern states, but is heavier than last year in Oregon.

GREENINGS show a better than average crop in Michigan and New York, and are good in Pennsylvania.

MCINTOSH have been increasing in importance in New England and New York, and all indications point toward good crops in these states. However,

McIntosh is relatively light in Michigan.

NORTHERN SPY prospects are below last year in New England, New York, Pennsylvania and Michigan.

Apples in the Champlain Valley

By JAY GELDER.

Prospects indicate a record McIntosh crop in Clinton and Essex Counties. Color and quality are excellent. Some sections have suffered from lack of moisture during part of August and September, but it has been a better than average growing season. There is some scab and the wind will no doubt take more than usual, because of the heavier load so that the actual commercial pack will not be large.

Spot picking is just starting (September 15th) on the lighter soil, but the major part of the crop will probably be picked during the week beginning September 25th. A few sales have been made at \$1.10 per crate for U. S. No. 1, 2½" up, but the majority of the larger growers are storing.

There is much controversy between grower and buyer about the method of packing. Buyer wants a bulge packed crate, faced and filled, which contains about 48 pounds of apples, and necessitates the crate being piled on side the same as oranges. A bushel of McIntosh weighs about 42 pounds. In other words, the buyer wants a gift

(Continued on opposite page)

(Continued from opposite page)

of one bushel in eight and is getting away with it in some instances. No pack can be made so large but what some grower can make it larger. Yep, buyers will pay a few cents more if they have to for one extra bushel in five than they will for only one extra bushel in ten. I am wondering if growers will not be forced to sell apples by weight. Many growers claim that would be impracticable but it has worked very satisfactorily with us for several years when selling to truckmen.

Indications are that all of our commercial growers will support our New York and New England Apple Institute this year. The Institute has done an almost unbelievable job with mediocre support. The officers deserve much credit. This year the New York and New England Apple Institute, with duplicate organizations throughout the apple growing sections of the United States, are to support a scientific research project by actual feeding tests of about two hundred children. This will further support the work pioneered by Dr. Manville, which has done so much to prove why an "Apple a day keeps the doctor away". The project will be directed by Dr. Lydia J. Roberts, Chairman of Home Economics and Household Administration, University of Chicago. There is already enough evidence to indicate that if the consumer realized the food and health value of apples there would not be enough produced to supply the demand. All of us born before the gay 90's remember Grandma feeding the baby scraped apples. Grandma knew it was important, but she didn't know why. Indications are that we will soon know why apple folk lore has persisted for ages. But this one is from a brain cell of our good friend Stuart Hubbard.

"They scraped them for the baby,
Because he could not chew.
And Grandpa, having lost his teeth,
He ate them that way too."

Markets for America

(Continued from Page 1)

Neither the Home Market nor New Markets in themselves can bring enduring prosperity to agriculture or to the nation. It is true that with the exception of cotton, tobacco, and wheat, more than 95 per cent of the total products of our farms is consumed in this nation. Increase home consumption 10 per cent and we have done more than if we were to increase exports 100 per cent, yet we dare not forget that commerce is the life-blood of civilization. America does have the right, and must maintain its share of the world markets for such commodities as cotton, tobacco, wheat and meat which can be produced here efficiently, cheaply and in vast abundance.

Those non-competitive raw materi-

als that we must have can be wisely exchanged for crops that we grow in abundance and the things which America manufactures so efficiently. We have a tourist deficit running into hundreds of millions of dollars. We have a freight and transportation deficit of a substantial amount. In other words, American tourists and shippers spend vastly more abroad than foreigners spend here. Equally important, our exchange in payment for services, etc., leaving this country, is hundreds of millions of dollars more than the exchange from across the seas. All of this adds up an exchange balance sufficient to make the three-fold challenge of markets work — The Home Market, New Markets, and Foreign Markets. They are all within our grasp.

All of the things I have mentioned are not enough. We must do some pioneering in the fields of new markets. Farmers must learn to cash in on the scenery, beauty, health and recreation of the farms and homes of our land.

Here is a place for all the enthusiasm, research, inventive genius and practical information of the nation in putting young men and women in rural areas to work.

It is time to realize that it takes more than the program and the crops of our dads and granddads to save us. The youth of tomorrow will starve to death if they just stick to old plants, old commodities, old markets and old methods. We must capitalize on the recreational side of life. Some day farmers will sell their sunshine and fresh air, their scenery and their fields for cash. Some day fishing and hunting and game in the wooded areas will be an attractive farm crop. Health and recreation must have a new place, and all of this brings me back to my place in the beginning — **MARKETS FOR AMERICA**. We must find a new place for the faith and courage of the nation. We must not stop here. We must re-challenge the faith and the enthusiasm and the pioneering spirit of our land.

We must go forward in human relationships and better marketing methods in exploring the pathway to gain a happier rural living. Here looms two factors we may not neglect. We must bring back the moral, the spiritual and the patriotic faith in America. The Church and Sunday School must re-establish themselves as building agen-

cies of national prosperity and the Grange and organized farm activities must take a larger place in building a better rural life. We must practice team work with business and labor, remembering we can only go forward as a united people. Go back to church and Sunday School. Have renewed faith in America, and then fight for better markets, better income, and better living. If we do this, better days are ahead.

Big Onion Crop

The New York state onion crop on September 1 was forecast at 4,092,000 100-lb. sacks. Last year's crop was 2,961,000 sacks, and the 10-year average 2,104,000 sacks. The New York crop is uniformly good this year, having been favored by dry weather.

On the other hand, the Massachusetts crop is way below normal, being forecast at 388,000 sacks, compared with 732,000 sacks a year ago.

The entire crop for late states is forecast at 12,825,000 sacks. This is an increase of 15 per cent over last year's crop, and an increase of 29 per cent above the 1928-37 average. Harvesting on September 1 was reported as well along for the time of year.

Milk Producers Vote on Amendments

Unofficial Returns Indicate Heavy Vote For Price Increases --- Hearings on Other Amendments Scheduled in October.

ON SEPTEMBER 13 Secretary Wallace approved the amendment to the Federal Milk Marketing Agreement for New York City. The voting was by mail, and ballots to be counted had to be in by September 22. Unfortunately this was too late for us to report the official results in this issue. As we go to press official announcement of the results of the vote on the Milk Price Amendment has not been made but from news we have been able to gather there is no question that the vote will be overwhelmingly in favor of the Amendment.

Next important event will be hearings to consider further amendments to the Marketing Order. Hearings will be held in Albany, October 10, and in New York City, October 16.

Proposals include:

1—Reducing market service differential of \$.23 per hundred paid to cooperatives for milk diverted from fluid market to manufactured products;
2—Reduction of the \$.05 per hundred payment to cooperatives that have

manufacturing facilities for handling surplus.

It is also proposed to write into the Order minimum prices to dairymen from April 1 to August 1, 1940.

There is considerable opposition to some of these amendments. Before approving them dairymen should study them carefully.

The amendment provides for changes in class prices of milk. Class I (fluid milk) will be increased from \$.25 to \$.282 (since August 25 under Mayor LaGuardia's strike settlement Class I price has been \$.260). The Class II-A (fluid cream) price will be \$.190, an increase of 35c over the price provided in the Agreement; and Classes II-B and III-B will each be increased 30c. The amendment provides that the increased prices shall continue until May 1, 1940.

Assuming that the amendment receives a favorable vote, which is probable, there is a question of what will happen to retail prices in New York City. At present, New York consumers are paying 14½c for Grade B milk delivered on the doorstep. The chances are, if the amendment becomes effective, the price to consumers will go up ½c a quart.

Rochester Producers Ask for Order

Producers in the Rochester area have asked for a State Milk Marketing Agreement, and a hearing is being held in Rochester on September 29. Rochester producers are asking for a Class I price of \$.315 until April 30 and a Class II-A price of \$.190.

Dairymen supplying the Buffalo market are voting on several amendments to the Niagara Frontier Milk Marketing Order on September 25. The proposed amendments are as follows:

1. Reducing the direct delivery differential from 30 to 20 cents.
2. Making a separate classification for milk to be made into cream cheese, and a separate classification for milk to be made into ice cream and other milk products.
3. Including two additional towns in the Niagara Frontier Milk Marketing Area, namely the towns of Clarence and Newstead in Erie County.

Farmingdale Contest Near End

At the Farmingdale, N. Y., Egg Laying Test, leaders at the end of the 49th week were as follows:

White Leghorns—First, Foreman Poultry Farm, Lowell, Mich.; Second, Miami Chick Hatchery, Sidney, Ohio; Third, Kauder's Poultry Farm, New Paltz, N. Y.

R. I. Reds—First, J. J. Warren, No. Brookfield, Mass.; Second, R. O. Wage-maker, Grand Rapids, Mich.; Third, Redbird Farm, Wrentham, Mass.

Among **Barred Rocks** the lead was held by V. H. Kirkup, Mattituck, Long Island, N. Y.

Leading **White Wyandottes** was Colonial Poultry Farm, Pleasant Hill, Mo. **N. H. Reds**, C. D. Cummings, Greenboro, N. C. **Cross-Breeds**, Hall Brothers Hatchery, Wallingford, Conn.

At the close of 49 weeks, all of the birds in the contest had averaged to produce at a rate of 40.4 per cent. We might add that the pen of Reds owned by J. J. Warren was first in all breeds. Also, the leading pullet was a member of the Warren pen, with 275 eggs.

D. H. I. A. Results for August

Although small in number, the Holstein herd of Peter Bodine, Wayne County, during the month of August made up for lack of size by heavy production. His three cows led the herds in the Dairy Herd Improvement Association by averaging to produce

1592 lbs. of milk and 59.6 lbs. of butterfat.

Other herds that averaged over 50 lbs. of butterfat were owned by Adolf Gaworecki of Onondaga County, John Ryan of Columbia County, and Arthur Williams of Allegany County.

Of 2880 herds tested, 40 herds averaged between 40 and 50 lbs. of butterfat per cow. Due to serious dry weather, production for the month of August was far below normal.

Cabbage Crop Short

On September 1 the estimated yield of late Domestic cabbage in New York state was 58,700 tons. The crop last year was 147,300 and the 10-year average, 87,900.

A.A.-Grange Bread Baking Contest News

THE COUNTY bread baking contests have gotten under way earlier than usual this year. Already six Pomona Granges have held theirs and reported winners to us, as follows:

COUNTY	GRANGE	WINNER
Chenango	Coventry	Mrs. Gertrude A. Ingersoll
Genesee	N. Alexander	Mrs. Alta Strong
Jefferson	Champion	Mrs. Ethel Fleming
Livingston	Keshequa	Mrs. Leon Goldthwait
Steuben	Prattsburg	Mrs. Lou Roloson
Yates	Rushville	Mrs. Earl Lafler

Each of these county winners is now eligible to take part in the State bread making contest, which will be held in December at State Grange annual session.

Names of Subordinate Grange winners are still pouring in and we are

The crop in the late states (Colorado, Indiana, Michigan, Minnesota, New York, Ohio, Oregon, Pennsylvania, Utah and Wisconsin) is expected to be 285,100 tons, which is 44 per cent below last year's and 6 per cent below the 1928-37 average. A considerable proportion of the Domestic crop will be used for kraut.

The late Danish crop in New York is forecast as 134,600 tons, compared to last year's figures of 219,400 and the 10-year average of 165,900.

Below average yields are expected from Colorado, New York, Michigan and Wisconsin. The total late Danish yield is forecast as 238,800 tons, which is 36 per cent below last year's crop and 15 per cent below the 10-year average.

Doughnut contest sponsored jointly by State Grange and *American Agriculturist* in 1937.

Mrs. Ruth Kleis Schletter, chairman of Hamburg Grange, Erie County, writes us: "The winner, Mrs. Frank Kleis is, I am proud to say, my mother and she has been baking bread for 30 years. Each Saturday morning, nine big loaves go into the oven. This is her schedule, but don't be surprised if you should drop in about Wednesday of any week and find her baking a 'few extra loaves.'"

Winner of Pine Plains Grange's contest (Dutchess County) was Mrs. A. C. Winans, with a score of 99. Grange Chairman Margaret Ames writes: "Mrs. Winans has passed the three score and ten and yet lives a very active life. She is a Past Master of Pine Plains Grange and has filled very capably several other Subordinate and County offices in Grange work. To us of the committee, it was most interesting that her bread was made with homemade liquid yeast which her mother taught her to make."

Chairman Mrs. Helen Seymour, of Cannonsville Grange, Delaware County, writes: "The contest aroused much interest and I think we all gained new ideas and learned something from it. Some of the women were not used to baking bread but tried it this time."

And now here are names of recent Subordinate winners:

Subordinate Grange Winners

COUNTY	GRANGE	WINNER
Allegany	Almond	Mrs. Ruth Sisson
Broom	Susquehanna Valley	Mrs. Earl West
	Union Center	Mrs. Ralph Young
Cayuga	Owasco Lake	Mrs. H. L. Burlew
Clinton	Champlain	Mrs. Hersey Deso
	West Chazy	Mrs. Charles Atwood
Columbia	Hillsdale	Mrs. John J. Mettler
	New Lebanon	Mrs. J. C. Johnson
Cortland	Miller	Mrs. Marion Dixon
Delaware	Cannonsville	Mrs. Helen H. Seymour
	Delhi	Susan Lasher
	Onleout	Mrs. Agner Cotton
	Shavertown	Mrs. Hattie Dibble
Dutchess	Pine Plains	Mrs. Amanda C. Winans
	Waldo	Mrs. Ira W. Bennett
Erie	Evans	Mrs. Elsie Wilson
	Hamburg	Mrs. Frank L. Kleis
	Marilla	Mrs. Bertha Tomlinson
Franklin	Westville	Alice Stark
Fulton	Crum Creek	Mrs. Marjorie Loe
Herkimer	North Star	Mrs. Estella Brooks
	Salisbury Ctr.	Mrs. Cora Homerighans
Lewis	Denmark	Mrs. Emma Zecher
	Gardners Corners	Mrs. Kent R. Denning
Monroe	Mendon	Mrs. Raymond Peters
Montgomery	Palatine Union	Mrs. John C. Fusmer
	Seabers Lane	Mrs. Leola Borchert
Onondaga	Tully	Mrs. Henry C. Blaney
Orango	Goshen	Mrs. Edward A. Hasbrouck
	Hamptonburgh	Mrs. E. Reynolds Farley
Oswego	Mexico	Mrs. D. W. Pickens
Otsego	Flycreek	Mrs. Dora Winne
Putnam	Mahopac	Mrs. Minna Hartwig
	Putnam Valley	Mrs. Harold Smith
Saratoga	Galway	Mrs. Vivian Drako
	Halfmoon	Mrs. Edna Crotty
	Milton	Mrs. Frank M. Englehart
Schuyler	Tyrone	Mrs. Ward Crawford
St. Lawrence	Rensselaer Falls	Mrs. Cecil Chambers
Sullivan	Hortonville	Mrs. Margaret Bauernfeld
Washington	Argyle	Louise MacDougall
	Easton	Mrs. Bertha Johnson
	Mettowee	Edith S. Cary
	Whitehall	Mrs. John Turnbull
Wayne	Macedon	Mrs. Leighton Thomas
	Newark	Mrs. Wm. Van Norman
	North Rose	Mrs. Greta E. Barnes
	South Shore	Mrs. Carrie La Gasse
Westchester	Yorktown	Mrs. George E. Holmes
Wyoming	North Java	Mrs. Mary Gaffney
	Perry	Mrs. Charles Habersaat
Yates	Barrington	Mrs. Paul MacMaster

Mrs. Alta Dye of South Dayton, N. Y., who won the bread contest held by Villenova Grange, Chautauqua County.

publishing another long list of them below. Here are a few of the interesting news items sent us by Subordinate Grange Chairmen of Service and Hospitality Committees, who have had charge of the contests:

Eighteen-year-old Louise MacDougall, winner of Argyle Grange's contest, Washington County, scored two points higher than her mother, who makes bread every week.

Mrs. Edna Crotty, winner of Halfmoon Grange's contest, Saratoga County, writes that her winning loaf was her second try at making bread, the first having been only a week previous to the contest. She adds: "It was fun making it, and I am sure I would not have tried if my husband hadn't encouraged me to do it. I am grateful to the Grange and to *American Agriculturist* for having this contest."

Crum Creek Grange, Fulton County, held its bread contest in connection with the Grange's final "Neighbors' Night" meeting, and had the largest meeting of the year with 135 members present.

Westville Grange's bread contest (Franklin County) was won by the second generation of prize winners—19-year-old Alice Stark, daughter of Mrs. Carrie Stark who won the State

A Peaceful **VICTORY FOR DAIRY FARMERS** *at the Ballot Box*

IT LOOKED IMPOSSIBLE THREE YEARS AGO ...NOW IT'S BECOMING A REALITY

A firm price for milk for months to come, established by farmers' vote and enforced by State and Federal action. This is the victory won by farmers in their battle of ballots.

Dealers for years turned farmers against each other. They drove milk prices down by playing one group of farmers against another. They delayed payments, failed to pay, broke agreements, cut prices—did all the things the human mind could conceive to get milk cheaper than their competitors.

All this came out of the farmer's milk check. Now dealers are compelled to pay farmers by legal and lawful means. Farmers are having a chance to say what their milk is worth. Three years ago it did not look as if the farmers would ever get legal machinery to enable them to raise milk prices. In those days many people,

including some farmers, said it could not be done.

For the first time in the history of the milk shed, farmers are granted the privilege of working together. By working together they have been able to win the support of State and Federal governments. This support — these privileges—provide the right means by which farmers are now controlling their industry.

No destruction of property, no injuring of neighbors, no threats of violence are necessary. If farmers will stay united and stick to their legal means, prosperity which is permanent can be brought to this milk shed. And for the first time dealers are being compelled to pay for the milk they buy from farmers on the date and at the price established. For the first time by legal and fair means farmers have control of the surplus.

"A House Divided Against Itself Cannot Stand"

Yes, milk prices are on their way up and they are being raised with the legal machinery we have been fighting to build for the past three years. But if we are to have permanent prosperity on the farm, we must be on guard against division in the farmers' ranks. We must hold fast to unity. We must have a common purpose. For now we have the right to fight, the chance to fight and the legal machinery with which to fight for our rights.

Yes, it looked impossible three years ago, but now the State and Federal order, approved by the highest court in the land, is making this a reality.

THE THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

War Time Price Trends

By LELAND SPENCER.

FOLLOWING almost immediately upon the outbreak of war in Europe, there was a sharp rise in prices of grains, sugar, hides, lard, metals, and other products in this country. A little later butter joined the upswing in prices, gaining about 4 cents a pound within a few days. These events have raised many questions as to what happened to prices during the previous World War, and what is likely to happen this time.

Leland Spencer

We all know that prices went up to a high peak during the last war, and then crashed some time after the fighting was over. But most of us are not so sure whether the rise in prices began at the start of the War, or which prices advanced the most.

Some of these questions will be answered by the figures that are given in the accompanying table. Changes in the general level of prices are shown by the index numbers of prices of basic

price. Many housewives remember that there was a shortage of sugar during the last war. So, in their minds, the first item of preparedness for war was a big supply of sugar. It may be cheaper again when the rush is over.

Another important change from the previous situation is that this war has been preceded by a long period of uncertainty for business people and investors. There is said to be a tremendous accumulation of funds in this country waiting for profitable investment. War makes inflation more certain, and therefore brings investors and speculators into the markets for commodities and stocks rather than government bonds.

In spite of all this, it would be rash for farmers to plan on a continued rapid rise in prices. The purchasing power of the countries at war is limited, and the abundant supplies already on hand will not be exhausted immediately.

Milk producers seem to be in a better position in some ways than they were at the beginning of the previous World War. Consumers are now accustomed to changes in the retail price of milk, and might accept further increases with better grace than they did in 1916.

The dealers now pay classified prices instead of a flat price, and the price for each class of milk is hitched to the

more than last year's supply. The grain supply per animal is estimated at slightly less than a year ago, but slightly more than the average for 1928-32.

MEAT ANIMALS—Hog prices rose sharply in early September. It is stated that the rise from September 4 to September 6 was the greatest for any similar period on record. It is expected that total slaughter of hogs in the year beginning October 1 will be considerably greater than during the past year.

Beef cattle prices also rose sharply during the first week in September. Slaughter of grain-fed cattle for this fall and early spring is expected to be larger than during the same period a year ago, but total slaughter of cattle is likely to be smaller during the coming months than it was a year ago.

WOOL—Supplies of raw wool in this country on August 1 were smaller than a year ago, but stores of wool in Europe and the United Kingdom are believed to be relatively large. Wool has been trending sharply upward in price. The last World War brought a boom to the domestic wool manufacturing industry, and history may repeat itself.

POULTRY & EGGS—On September 1 storage stocks of eggs were about 10 per cent above a year ago, and it is expected that egg production during the fall and winter will be slightly heavier than a year ago. On the other hand, a better demand is expected partially to balance this situation. Eggs, too, have been increasing somewhat in price, but it appears to be the usual seasonal increase and eggs have been bringing slightly less than a year ago.

Milk Production Down

The State Department of Agriculture and Markets, in latest dairy report, states that on September 1 production per cow on dairy farms was lowest for that date since 1934. For month of August, milk available for delivery at larger plants was estimated at 460,000,000 lbs., a drop of 7.5 per cent below August 1938 and the lowest production for August since 1922, except in 1926, 1930 and 1933.

On the basis of the month's figures, says the report, milk strike reduced deliveries for the entire state by about 5 per cent. Consequently, actual deliveries were about 437,000,000—the lowest August deliveries during the 18 years records are available.

Heavy Grain Feeding

State report indicates heavy feeding of grain to cows. Grain feeding was not quite as high as September 1936, but compared to amount of milk produced, it was highest for that date

since 1931 when figures were started.

Average pasture condition for the state September 1 was 50 per cent of normal. Other low years were: 1936—49 per cent; 1934—49 per cent; 1930—51 per cent; 1933—56 per cent. In other years September pasture conditions have been about 60 per cent of normal. Hardest hit, according to crop reporters, was southern New York where pastures are 30 per cent of normal. Best is northeastern area with 64 per cent of normal.

New Seedings Poor

Condition of new seedings for the state is given as 39 per cent of normal, which is much poorer than previous dry years. Only 16 per cent of the hay acreage will be cut for second crop, but about the usual amount of hay land will be pastured this fall.

Crop reporters indicated the average price of dairy ration on September 1 was \$1.49, as compared to \$1.52 on September 1, 1938, and \$1.90 on September 1, 1937; but of course this year's price was reported before feed prices started up.

Returns for August Milk

The August milk price to producers, as announced by Administrator Harmon, is \$1.965 for 3.5 milk in the 200-mile zone. The price under the provisions of the Federal-State Agreement was \$1.89, and added to that was 7½¢ as a result of the strike settlement terms negotiated by Mayor LaGuardia.

The Dairymen's League announces an average net pool return for August of \$1.945, which is 46½¢ more than League members received for July milk and 67½¢ more than was received in August a year ago.

The price of \$1.89, without the addition secured by the strike settlement, was based on the following class prices:

Class I (fluid milk)	\$2.25
Class II-A (fluid cream)	1.55
Class II-B	1.381
Class III-A	1.281
Class III-B	1.051
Class III-C	.951
Class III-D	.926
Class IV-A	.851
Class IV-B	.988

Of the 328,169,911 lbs. of milk involved in the figuring of the August price, about 84 per cent was used for fluid milk and cream.

Rumors and counter-rumors are flying thick and fast among producers, both those who favor the amendment and those opposed to it. In these days we all understand the necessity of studying conflicting news reports about Europe's war and of considering the sources of reports in order to get a clear picture of the situation. It is just as important to read between the lines of charges and counter-charges in the milk situation and to reach conclusions based on facts rather than on emotion.

CHANGES IN PRICES OF FARM PRODUCTS AND OTHER COMMODITIES DURING THE WORLD WAR PERIOD, 1914-21

Index numbers: 1910-14 = 100

Month and year	Wholesale prices basic commodities (U. S.)	Farm price of milk (N. Y.)	Farm price of other products (N. Y.)	Prices paid by farmers (U. S.)	Retail price of dairy feed (N. Y.)
July 1914	98	96	106	100	102
Sept. 1914	103	95	101	100	105
Dec. 1914	97	99	94	102	104
1915	113	101	106	114	101
1916	157	124	144	135	131
1917	205	180	171	160	189
1918	212	234	176	190	185
1919	238	214	204	200	220
1920	176	183	163	180	170
1921	125	157	150	147	124

commodities. As most readers of this column know, basic commodities include such raw materials as wheat, cotton, lard, butter, hides, silk, copper, petroleum, pig iron, and rubber. The World War began early in August 1914, but there was no striking up-turn in prices until late the following year. The same is true for the prices of farm products in New York and for the prices farmers had to pay for feed and other supplies. One product that was affected almost immediately by the War was beans. The New York farm price of beans jumped from \$2.70 per bushel in December 1914 to \$3.88 per bushel in December 1915 and to \$6.44 in December 1916.

Beginning in 1915, the prices of basic commodities rose more rapidly than the prices of New York farm products. This is not surprising, since a number of essential war materials are included. In 1915 and 1916, the price of milk did not rise as rapidly as the prices of other farm products. As shown in the table, the farm price of milk had gone up only 24 per cent by December 1916. Meanwhile, in October 1916, there had been a milk strike, which was won by the farmers! The market prices of butter and cheese also lagged behind the general price trend during 1915 and 1916. The big rise in butter prices did not come until 1918.

Of course, it is true that conditions are never twice the same, and therefore there is no certainty that the price trends experienced during the previous World War will be repeated. In fact, we have already seen some striking differences. This time, prices of commodities and prices on the stock exchange both jumped upward at the outbreak of war. On the previous occasion, commodity prices were steady and stock prices slumped.

Our recollection of what happened to prices during the previous war makes a difference. Anticipating inflation, many people have rushed to buy things that are expected to rise in

market prices of butter or cheese. New York dairymen will therefore get the benefit of any advance in butter or cheese prices.

Another condition that is more favorable to farmers now, than in 1914, is the fact that a great many people are better informed about the prices of farm products and their proper relation to the general price level, to costs of production, living costs, and the like. It is likely to be easier for farmers to get fair consideration by public bodies that have, or are given, the authority to fix prices.

Prices of Farm Products Trend Upward

Recent trend of farm products has been upward, with degree of rise influenced by possible prospective exports, by some predictions of better demand, and of course, as always, by supply.

WHEAT—Wheat prices are up until they are now above amount of loans made to wheat growers by government. This, plus increases in corn and cotton prices, may avoid necessity of government's making up difference between loans and market values. Total U. S. wheat crop is estimated at 736,000,000 bushels, which includes jump in spring wheat estimate of 5,000,000 bushels during August. The crop is about 50,000,000 bushels bigger than we are likely to consume in the 1939-40 season. The wheat carry-over on July 31 was 254,000,000 bushels.

CORN—Corn price advanced about 15¢ a bushel during first half of September. This year's crop is expected to be 2,523,000,000 bushels, the September estimate being 63,000,000 bushels larger than the August 1 estimate.

The total supply of all feed grains is estimated at 112,000,000 tons—an increase of 2,000,000 tons over the August 1 estimate and 1,000,000 tons

Government May Buy Apples

It now appears that federal government will step into the apple deal in response to requests made by growers' organizations. The present plan, which is expected to receive O.K. of Secretary Wallace, calls for reducing the available supply of fresh fruit by 20 per cent through a diversion program.

Under this program the government will buy approximately 10 million bushels of apples of Combination Grade or better, but not more than half of the purchases will be at the lower grade. The price to be paid will be the going market price for the fruit at terminal, less cost of transportation, handling and commission. In addition, each grower selling apples to the government will be required to divert to the by-products field the same amount that the government takes. It is expected that the price will not be set, as was the case in 1937, but will be subject to revision at least every two weeks in accordance with the market.

A committee named to represent growers includes W. Raymond Tousey of Waterport, James G. Case of Sodus and George Bradley of Middleport.

Consideration of a possible diversion plan was given recently at Cincinnati by representatives of the New York

and New England Apple Institute and other growers' groups from various parts of the country. New York was represented by F. W. Beneway, of Ontario, vice-president of the Apple Institute, who also appeared for the Farm Bureau Federation. Tom O'Neill, institute manager, and E. S. Hubbard, institute treasurer, also participated.

The outlook for the crop was reviewed by Porter Taylor of the general crops section of the United States Department of Agriculture, and by other representatives. The total U. S. commercial crop was placed at about 100 million bushels. Opinion was expressed that about 10 million bushels would go into the export market and culls would account for another 10 per cent. This would leave a crop for the domestic market only slightly larger than normal consumption. Since then there has been some fear that war may upset export trade.

A feeling upon the part of growers has been that a considerable part of the early fruit should be moved early in the season. With this in mind grower representatives got busy with government officials to develop a program that would prevent the market from sudden gluts and help in stabilizing prices.—Skeff.

NEARBY MARKETS for NEARBY POULTRYMEN

Mrs. Gebhardt cleaning and weighing eggs to be put in dozen cartons. In the background are chickens which have been dressed ready for delivery.

"I Sell at Retail" Says Edmond Gebhardt.

QUALITY, honest dealing and punctuality are the three fundamentals followed by Edmond H. Gebhardt of Sicklerville, N. J., in developing a successful retail egg and poultry route. Mr. Gebhardt, a former salesman, turned farmward when the depression came, and by the adoption of the same methods that sold merchandise a decade ago, finds that eggs can be sold and a real business developed.

Four years ago the Gebhardts started their retail egg route. Within six months they had developed the route to the capacity of their plant, and outside of a sudden shortage of eggs which may be purchased from a nearby quality flock, only eggs from their own farm are sold. Most of Mr. Gebhardt's customers have been with him from the start of his retail route, and the only time he loses a customer is when he moves away.

When I called on this salesman-poultryman, he had just returned from his Camden, N. J., egg route. He showed me his returns for the day. They were as follows: Jumbos, 30 ounce eggs @ 48 cents; Large, 24-28 ounce, 42 cents; Mediums, 21-23 ounce, 36 cents; and Pullets, 18-20 ounce, 28 cents. Mr. and Mrs. Gebhardt operate a 700 bird plant, and every egg and every chicken goes to market through the retail channel. The only exception

By AMOS KIRBY.

might be days of heavy culling, or special periods when a part of the birds are sold wholesale. The eggs are all sold at retail.

The first fundamental on this farm is to produce a quality egg. Everything else is of a secondary consideration. The best feed that money can buy is the first step. "You can take a poor hen and the best feed and make a good egg, but you cannot take the best hen and a poor feed and produce a quality product," says Mr. Gebhardt. After the hen does her part, the Gebhardts leave nothing to chance. The eggs are gathered three to four times daily, stored in a cool cellar, carefully candled and marketed twice each week. All eggs are graded for size and top prices are realized at all times.

The second important factor in this producer's success is his system of merchandising. He tells the consumer all there is to know about good eggs. The customers come out to the farm and see the way the eggs are produced. Few consumers know anything about eggs except that they come in a shell.

"I have found," explained Mr. Gebhardt, "that most city folks will pay a few cents extra if you can show them that you have a quality product. I tell them everything about eggs. I talk to them about feeds and feeding. I show them around when they come down to the farm, and they get to know that it takes real effort to produce good eggs."

Another thing Mr. Gebhardt never does is to over-sell the customer. No more eggs are sold to a consumer than can be used within the next few days. It has been the experience of this salesman that an extra egg that may be kept too long is a detriment to the next sale. If eggs are to be sold as fresh, they must be fresh when the consumer wishes to use them.

The third fundamental is punctuality. Eggs are

delivered twice each week. Tuesday and Friday are market days and Mr. Gebhardt tries to get to the same house at the same time every market day.

"Keep the consumer satisfied with a good egg delivered on time and you will have a steady customer," is a motto on this farm, and from the returns received and the little turn-over in customers, there is plenty of evidence that the idea is sound.

The same methods are followed in the marketing of meat. All chickens are sold dressed and ready for the pan. Chickens are sold on order. Mrs. Gebhardt helps in the preparation of the meat birds for market, as well as assisting in the preparation and grading of the eggs.

Mrs. Gebhardt is a bit "fussy" about picking. She insists that each bird be picked clean. She knows from experience the reaction when a customer is forced to "pin-feather" a bird that has been purchased from the butcher, and she does not want her customers to find the same fault.

Every chicken is immediately chilled and packed in crushed ice. The killing, dressing and preparation of 72 chickens in two days has been about the limit that she has done for one market trip.

Top prices are realized on dressed poultry.

The dressed chicken business has grown like the egg trade. Their one slogan has been: "Sell no chicken that we would not eat on our own table."

Mash Hoppers

We used to hear a lot about big feed hoppers that would hold a week's supply of mash. Now it seems that most houses have the small floor hoppers. Is there any good reason for this?

Unquestionably floor hoppers, which of course have to be filled more frequently, are gaining in popularity. I think the chief reason for that is that a poultryman can keep a closer check on the amount of mash the hens are eating. Also, the hen's can feed on both sides of these hoppers, which cuts in half the amount of hoppers necessary. Some poultrymen have found that mash consumption is stimulated by frequent addition of fresh mash, or even by stirring up the mash in the hopper occasionally.

NOTICE OF SALE BY VIRTUE OF DEFAULT In Conditional Sale Contract the General Motors Acceptance Corporation will sell at public auction on **OCTOBER 11, 1939, AT 11:00 A. M., E.S.T.** at E. J. Mrs. Lottie A. Marks,

DEPOSIT, NEW YORK

DOWN THE

By J. F. (DOC) ROBERTS

"THIS LITTLE PIG went to market, and this little pig stayed at home."

Why the one stayed at home is nobody's business, but the one that went to market has such an economic influence on so many different people that it does become everybody's business. And this is largely because the average farmer only gets 41% of what his product ultimately brings, the other 59% being taken for marketing, distribution, or processing, and 59% of farm income is still a lot of money. Nevertheless, the one that did stay home really did keep the 59% of its value at home—that's one thing to remember, and it is also another reason why there is a place for at least a few hogs on every farm.

The pig that went to market then, is the real problem, and it is a problem of price, plus saving as much as is possible of this 59%. PRICE—Somebody has said with a fair degree of accuracy, "The market price on any farm product is the lowest price at which any seller may move or sell that product." The reason that this is at least partly true is because as a farm product goes to consumer trade, every retailer must compete with price against every other retailer, regardless of supply, and except in cases of shortage, regardless of demand as well. Pig prices, then, can only be maintained by a concerted and determined effort on the part of every producer, to be sure that the pig he markets is not sold for less than the prevailing market price, and the realization that when his pig does sell for less, it tends to break down the price of every other pig.

How then, can the man who has a pig to market, help to raise, not lower, the hog market, and how can he get the most money himself for that pig? If I could solve these questions, I would

be solving the entire farm marketing problem, and that is ridiculous. Yet we do have marketing aids and marketing services, which, while imperfect, can reasonably assure you that you can help the market price level, and also help yourself. The livestock market reports, put out in almost all of our newspapers by the U. S. Department of Agriculture, are reliable and authentic, but they are of no real value unless a man understands grades. While this sounds as if it was a big order, it is not. The average farmer can get a comprehensive idea of market grades, either by visiting a stockyard in his community, through his County Agricultural Agent, or by attending the livestock meetings which are held in almost every section, at least a few times every year. Then he can refrain from selling his livestock, except according to grade, and refuse to "lump" it off.

Most reliable firms on the larger livestock markets send out weekly price reports, which can be obtained by request, and free of charge, which will keep any man pretty fairly well posted on what his livestock is actually worth. These firms also offer visits to your farm, within a reasonable radius of the market, by men who can go over your livestock and give you reliable information. They are also available by telephone or letter and are continually answering requests for information from both these sources. So do not feel afraid to call upon them. The Extension and Animal Husbandry Departments of all our State Colleges also offer marketing services and grading information. From all these sources, you can be free of a local price situation, and get away from the idea that because your neighbor sold some of his stock at a price, that is all your stock is worth.

Local farm sales do not make livestock prices. The price you get is always based upon the price made on open, competitive, livestock markets. Therefore, to help, see that your livestock enters into this competition, either by your truck, or local trucks, or local buyers who go to market with it, and that it does not get into the hands of either processor, packer or consumer without at least some competition for it.

Sheepmen Plan Field Days and Ram Sales

SHEEP growers from all parts of the state are being invited to the Batavia Fair Grounds at Batavia, New York, on Wednesday, October 4 and to the Penn Yan Fair Grounds at Penn Yan, New York on Friday, October 13. The occasions are the annual Field Days and Ram Sales which are staged by the Western New York Farm Bureau Sheep Committees and the Sheep Committees of the Finger Lakes region.

These sales have been developed by the Sheep Committees in response to requests from sheepmen as a means of lessening the ever burdensome problem of finding desirable breeding rams for farm flocks. Hundreds of flock owners are planning to come to these sales in order to avoid the time, the expense and the bother of riding the roads in search of desirable breeding rams to head their commercial flocks.

H. A. Willman of the State College of Agriculture says that prominent breeders will be on hand with over a hundred selected young registered rams for sale. Nothing but purebred rams are offered and all rams are guaranteed breeders. The rams will not be sold at auction. All transactions will be privately made between buyer and seller.

The committees in charge of the

two events are arranging features of interest for both adults and for club members. These meetings will provide an excellent opportunity for sheepmen to learn more about sheep problems. For instance, Dr. D. W. Baker of the New York State College of Veterinary Medicine will perform a post mortem of a sheep to show worm troubles. It is important, too, that sheepmen know more about internal parasites and the damage which they cause.

The committees have arranged some sheep dog driving demonstrations, judging contests and for demonstrations on the selection of rams and exhibits showing the kind of a ram which would be the most desirable on your flock. Four-H club members interested in sheep raising are also invited to attend the Field Day and Ram Sale. Of particular interest to the boys and girls will be wool grading and judging contests and also contests in judging rams.

At Batavia the annual Lamb Feeders' Banquet will be held at the Presbyterian Church in the evening of October 4. Delmar LaVoi of the National Livestock and Meat Board, Chicago, will be the principal speaker. Another feature of the day will be a program for consumers held in cooperation with the Genesee County Home Bureau and

the Niagara, Lockport & Ontario Power Co. The program will include the preparation and cooking of lamb, and will be held at the Niagara, Lockport & Ontario Power Building at Batavia.

Make your plans now to attend one of these Field Days and Ram Sales, keeping in mind that October 4 is the date set by the Western New York Committee for the Batavia Field Day and Ram Sale and October 13 has been calendared by the Finger Lakes Ram Sale Committee for their event which is to be held on the Fair Grounds in Penn Yan.

FALL FASHIONS

by
MRS. GRACE WATKINS HUCKETT

ELEGANCE, dignity, womanly youthfulness and a new sophistication distinguish fall and winter fashions. From mid-Victorian and Godey periods and from the 1890's, the designers bring sweeping hiplines and full skirts, natural shoulders but baggy sleeves, blouses, feather trimmed hats, much jewelry, and simpler gloves. Emphasis is on the tight bodice and the full skirt. Puffed shirring, used extensively for wraps and bonnets worn back off the face, carries out the old time illusion. Other hats are modified Empress Eugenies, and pillboxes trimmed with feathers, fur or veils.

Many suits show long jackets, easily fitted and belted. Geometrically shaped pockets as well as collars or revers may be finished with narrow pipings of leather. Belts are highly decorative.

When it comes to fabrics, the accepted mid-Victorian silhouette calls for materials with enough body to shir and drape easily. Lightweight woollens meet this need. Besides the drapy types, there are the velvety textures, hairy surfaces, plaids, velveteens and self designs which look almost like matelasse. Fancy finishes are feather cloths, novelty stripes, box checks, two-tone mixtures, twill types, bayadere ribs, hidden stripes and nubs showing many contrasting colors.

Rich fall colors crowd the ever

popular black. Greens, browns, wines or grays offer a choice from light to dark and all between.

Velvets, especially the crush-resistant ones, are strong for evening, while velveteens, very colorful ones in striking effects, make compelling daytime dresses and costumes.

Coats have more fullness either in front or all around. Collars are larger and fur jacket coats are excellent. Reefer coats will be tops in sports coats, while favorite materials are tweeds, plaids and checks. Suits come in three types: costume, 3-piece, or fur jackets and dressmaker suits. Dress coats and suit woollens have a dull rather than lustrous appearance. Smooth faced duvetyns are chosen because of their richness for better type coats. Diagonal weaves, self stripes and some with a hairy nap are a variation from the smooth fabrics.

Skirt length remains short this season, with no increase in length looked for. Belts when used do not detract from the gracefully flaring silhouette. The narrow front belt, attached to the sides of the garment, is most frequently seen. A separate girdle belt of cloth or suede is wide in front but tapers down to normal in the back.

Sweaters and skirts are more important than ever, sweaters even appearing in fancy forms as even-

Aunt Janet's Favorite Recipe

NOTHING quite takes the place of the different sandwich breads for lending interest to the school lunch or for afternoon tea. And who, child or man, can resist tasty, satisfying Peanut Butter Bread?

PEANUT BUTTER BREAD

2 cups flour	1 jar peanut butter (6 oz.)
2 teaspoons baking powder	1 cup milk
1/2 teaspoon salt	2 eggs
1/2 cup sugar	1/4 cup shortening

Sift dry ingredients together. Work in peanut butter and shortening. Stir in milk and eggs beaten together. Bake in well-greased loaf pan in moderate oven (350° F.) about 1 1/2 hours.

(Continued from opposite page)

ning garments. Stockings lean to the light side because of short skirts.

DRESS PATTERN No. 2739 is right in the swing with its modified bustle which is fashionable without being too extreme. Crisp faille would carry out the 19th century appearance. Size 12 to 20. Size 16 requires 2 5/8 yards of 54-inch material.

JACKET SUIT PATTERN No. 2771 gives you a chance to have a fling with plaids if you feel in that mood. The jacket, with or without collar, can do double duty with other outfits. Sizes 12 to 40. Size 16 requires 1 1/2 yards of 54-inch material for long sleeved jacket; 1 5/8 yards 54-inch for skirt.

DRESS PATTERN No. 2663 is for a classically simple frock with the becoming heartshaped neckline, ideal for the mature face and figure. Sizes 14 to 44. Size 36 requires 3 3/8 yards of 39-inch material.

DRESS PATTERN No. 2793 is a good basic frock which could well be the mainstay of the fall and winter wardrobe. Its surplice front and 6-gored skirt make for smart becomingness and good fit. Sizes 36 to 50. Size 36 requires 2 3/4 yards of 54-inch material, 3/4 yard 35-inch contrasting.

COAT PATTERN No. 2800 will fit and flatter every type of face and figure. It may be plain or fur trimmed and gives a choice of several necklines. Sizes are 16 to 50. Size 36 requires 3 1/2 yards of 54-inch material; 3 1/2 yards of 39-inch for lining.

DRESS PATTERN No. 2844 with its high up pockets and swing skirt has an air of youthful jauntiness and interesting details which everyone covets. Sizes are 11 to 19. Size 15 requires 3 3/4 yards of 39-inch material, 3/8 yard 39-inch contrasting.

DRESS PATTERN No. 2836 features the new and popular front fullness with nipped in waist and wide hemmed skirt. Its unique shoulder line is another fine detail. Sizes are 12 to 40. Size 16 requires 3 1/4 yards of 39-inch material.

DRESS PATTERN No. 2776 is excellent for that light weight wool. Its soft yoke front and casual smartness allow it to go anywhere. Set it off with a contrasting belt. Sizes are 12

to 40. Size 16 requires 2 1/8 yards of 54-inch material.

HAT PATTERN No. 2801 contains 4 hats, and includes the foremost silhouettes of the year, the bustle hat, the off-the-face and the profile beret. One size, adaptable to any head size.

HAT PATTERN No. 3165 includes three hats, one for every occasion. One size, adaptable to any head size.

TO ORDER: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, New York. Add 12c for a copy of our new fall and winter fashion catalog.

Honey Treats

By LOUISE PRICE BELL.

UNLESS we raise bees ourselves, we often overlook the importance of honey on our tables, and yet it is a delightfully nourishing and adaptable food.

If you want a drink that will call forth *ohs* and *ahs* from both children and adults, try beating an egg with three ounces of strained honey, then adding to a pint of whole milk. Pour this egg, honey and milk mixture over ice cream (home-made is of course the best!), add a glass or paper straw, and serve with a smile. It is *Honeyade*, if your friends or family ask you—which they will.

Here's another treat: Mix one ripe banana (which has been well mashed) with two tablespoons of honey and one teaspoon of vanilla. Add this to a pint of milk, shake well, and pour into glasses. Top with a dab of whipped cream and a sprinkling of cinnamon.

For sandwiches that are "different" and call for repeat orders, mash a cream cheese well, add strained honey to make a smooth paste. Add a half cup of shaved pecan-meats and spread the mixture between thin slices of fresh whole-wheat (or white) bread. Remove crusts and roll, or leave plain if you prefer.

Honey really comes into its own at dessert time. When you tire of the same desserts, see what you think of Frozen Honey Ambrosia for a real change. To make it, soak a teaspoon of gelatin in two tablespoons of water and let stand for a few minutes. In the top of the double boiler, place 1/2 cup of strained honey, 2 egg yolks, and 1/4 tsp. of salt. Beat hard with egg-beater until well mixed, then place over boiling water and cook until thick. Remove from fire, add gelatin, and stir until dissolved. Cool, add 3 tbsps. lemon juice (strained) and 1 cup of whipping cream beaten until stiff. Pour mixture into freezing tray and freeze for three hours, stirring occasionally if you wish, though stirring is not necessary. This dessert may be frozen in a hand-freezer also.

EDITOR'S NOTE: For another delicious honey dessert, and one that is easy to prepare, try this: Fill individual sauce dishes with shredded eating apples just before serving. Pour some cream over each, and then add a little honey—not too much, just enough to drip lightly over shredded apples and cream. This is a real farm dessert which is sure to please everyone.

"But even with Milton's three suicide attempts the bill shouldn't be \$4.50!"

Old Home Week at Waynor

III. "When the Savings-Bank Was Robbed" (PART I.)

FROM 1846 to 1856 was a time of prosperity in Waynor. Abundant crops were raised, for most of the farms were new, and as yet the soil was rich enough without fertilizers. The storekeepers at the "Center" shared in the general prosperity. Savings were accumulating in farmhouse chests and bureau drawers; and in the fall of 1851 Newell Chapman, who had been one of the selectmen for six years, proposed to start a savings-bank.

That was then a new idea, but it found favor at once. Chapman became president, and Henry Barron was named as cashier. The necessary legal steps for incorporation were taken that winter, and in March the Waynor Savings-Bank opened for business in a room in the rear of Henry Barron's shoe-store, rent-free.

Very little expense was incurred. The president and even the cashier served without salary. The office furniture consisted merely of a desk and two chairs, a table, two blank books and a small iron safe of most primitive construction. The cashier carried the key of the safe in his pocket along with his jack-knife.

President Chapman was a long-headed Yankee, who knew how to invest funds safely, and almost every prosperous farmer in town was a trustee. Bank examiners were not needed.

Chapman and Barron were shrewd and close, but strictly honest. It had not occurred to bank presidents then to use deposits for stock speculations. People brought in their savings, and Chapman and Barron invested them as fast as they could in mortgages, bearing the legal six per cent interest, with sometimes a "bonus" in advance, which was also legal where both parties agreed on it at the outset.

In 1856 the bank had in investments a hundred and ninety-two thousand dollars, not a dollar of it drawing less than six per cent, and much of it more, owing to Chapman's shrewdness.

The entire bank expenses that year—largely costs of foreclosures of mortgages, registration fees, and so forth, with some necessary travelling expenses on the part of the president and the cashier—were seventy-eight dollars and twenty cents.

This was before the great financial panic of 1857. That crisis, however, was little felt by the Waynor bank. The deposits were in farm mortgages, upon which the panic had no effect.

But during the season of 1856 we heard of a savings-bank robbery for the first time in our state. The bank at B. had been entered by night and the door of the safe broken open. Everyone felt that it was a crime too audacious, too outrageous to have been committed by any ordinary person or resident of the town; and the idea prevailed at once that it was the work of some new and desperate kind of reprobate.

President Chapman called a meeting of our savings-bank trustees to talk over this new danger. He was a wary man. What had happened in B. might happen in Waynor, he said. If such daring rascals were roving about the country, it behooved us to be on our guard; for the bank often had considerable sums of money in the safe.

From accounts of the robbery at B., it was conceded that no safe door or brickwork could withstand such resolute rogues. Chapman came to the conclusion at once that a watchman was the safest precaution.

But to hire a watchman at a dollar a night was a piece of extravagance that shocked the minds of the trustees.

Chapman himself recoiled from it.

Chapman held to this idea, however. He and Barron fixed up a little sleeping-room directly over the bank, and by judicious persuasion prevailed on a young fellow, named Pinckney Danbridge, to sleep there. Then Chapman—who never took a cent in payment for his own services—worked privately for two days on a contrivance for waking young Danbridge in case the safe in the room below was approached in the night.

In some way a wire was conducted from beneath the floor boards in front of the safe, up the wall and through the floor of the chamber to a clock alarm. If anyone trod on that board in front of the safe door, the alarm

By C. A. STEPHENS

would go off close by Pinckney's head.

What he had to do then was to throw up his chamber window and fire a double-barreled gun, which would wake not only Barron, who lived in a house directly across the street, but everyone else in the vicinity.

For sleeping there, Danbridge was to receive ten dollars a year and his room rent; and Chapman did not fail to impress on his mind, at frequent intervals, a profound sense of his responsibility to the bank and to the public. There is no doubt that Pinckney felt it.

He slept over the bank for a year or more; and it was one of Chapman's rules that he should be in his room every night at half past nine. Chapman took no chances on a boy's carelessness. He or Barron wound that clock and set the alarm every night.

The apparatus was all right, and would have worked according to schedule every night of the month and year. But Pinckney had become enamored of a maiden living at the other end of the hamlet; and it has to be said of him that he fell into a habit of making long calls at her house in the evening.

The Song of the Lazy Farmer

MY NEIGHBOR says a silo full of feed for ev'ry cow and bull, is best insurance that the kine will be well-fed and never pine for blue grass pastures when the snow is blowin' round at ten below. At silage they will make a pass nor ever miss the taste of grass, all winter long a taste of green will keep their appetites all keen, with glossy hides and placid eye they'll chew their cud without a sigh, with milk they'll run the buckets o'er while figures on the cream checks soar. The way to make the dairy pay, according to my neighbor's say is just to feed them critters right, with silage morning, noon and night.

I used to have a silo, too, but when the wind came up and blew it over one wild summer night, I've never found the time yet, quite, to build that silo up again, and so in winter weather when my neighbor's cows eat silage green, my critters allus can be seen humped up behind a stack of straw. It ain't much good, but when their craw is full of straw they think they're fed, they're healthier than in a shed. Their milk flow isn't up to par, but then, it's good to know they are not pilin' up a big surplus to bust the price and cause a fuss. They're savin' up their strength till spring, when they'll roll out the milk, by jing!

Bashfulness in part may have led him to conceal these visits. But it has also to be related that he was accustomed to go to his room over the bank at eight o'clock, and leave it privately later in the evening, after Barron and Chapman had gone home, supposing that he was snug in bed upstairs.

This was all very wrong, of course, as the event proved. For the bank robbers really came one night in August while Pinckney Danbridge was making a protracted call at the other end of the village.

There were two of the robbers, and one of them, as afterward transpired, knew the place very well. The night was wet and foggy, on the dark of the moon, but the robbers pried up a side window of the bank room and entered without difficulty.

Beyond doubt they trod on the board by the safe and set off the alarm upstairs. But no Pinckney was there to fire the gun. The robbers appear to have heard the alarm, and beat a retreat for the time being; but as no one stirred, they went back and wedged open the safe door at their leisure.

There were, as it happened, about eleven thousand dollars in the safe, besides promissory notes, mortgages and other papers of value to the bank. The men took all these, put their booty in an old leather valise, and decamped by the window, as they had entered.

But it chanced that Pinckney was now tiptoeing his way back to his bed-chamber, and in the fog and darkness he nearly ran into the robbers as they emerged from the narrow alleyway between the shoe-store and the building next to it. He was stealing home so quietly that the robbers did not hear him, but he heard them; in fact, he had heard them getting out at the window, and surmised instantly that mischief was on foot. He stood quite still as the two men hurried past him, and he heard them go down the middle of the road, so as to make no noise on the plank sidewalk.

Pinckney's suspicion was fully confirmed when, on going in between the buildings, he found the bank window open. Owing perhaps to these nocturnal trips, he carried matches in his pocket. Striking one, he held it in at the window. Even by the fitful light it gave, the open safe door caught his eye, and he knew what had happened.

He was conscience-stricken. What would Chapman say to him? What

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Autumn

The cricket's chirp is dry and harsh,
Grass is brown and the flowers are old;
But red leaves fling across the marsh,
And mountain tops are rimmed with gold.

When life's short summer days are past,
And Youth's bright birds have sung
their lays,
May warm, deep courage come at last,
And Autumn glory crowd our days.

—Julia Lounsbury Wallace,
Brooktondale, N. Y.

would Barron say? What would everybody say? It would all come out that he had been calling on Elsie Dunn. And now the bank's money was gone and he was to blame for it! Even while he stood there, striking matches, the robbers were escaping with all that money. He ought to follow them and see where they went.

That seems to have been what passed through Pinckney's mind, and it accounts for what he did. For instead of giving an alarm, he ran like a fox down the road after the robbers. The miscreants had a wagon and horse, which they had left at the lower end of the village, hitched in a church horse-shed. Pinckney heard them back out and heard the chafe-iron squeak as they turned and drove away along the country road to the southward.

It was too dark to see them, but he ran on, and for a mile or more kept within hearing distance of the wagon. He was a long-legged youth and a good runner. They drove fast, however, and gradually drew out of hearing.

The pace, too, had begun to tell on Pinckney, and he now realized that he would be unable to follow them far. He was near the old Chase farm, a mile below the village, and pulled up to get breath and think what to do.

As he stood there, he heard the step of some animal, and made out the head and neck of a horse looking at him over a gate by the road-side. The horse was standing in a stable-yard.

Pinckney knew the Chase boys and, indeed, knew the horse. He considered the necessity so urgent that, without stopping to wake the family, he entered the stable, and by striking another match, found the head-stall of a harness; and having bridled the horse, he mounted, bareback, and went on in pursuit of the wagon. In the course of an hour he heard the wagon ahead, and then followed on more cautiously for several miles. He was not cautious enough, however, for at the foot of a long hill in the Town of Roland, the robbers either heard the horse's hoofs behind, or from some other circumstance suspected that they were pursued. They stopped in the shadow of some pines a little off the road and lay in wait there.

It had now begun to grow light a very little, for it was past three o'clock in the morning. Pinckney came on and did not see the team till he was within a few yards of it. He pulled up then, very suddenly and with good reason, for there stood the two men with derringer pistols pointed at his head.

(Part II, which concludes this story, will appear in our next issue.)

Today in Aunt Janet's Garden

Pointers for Wildflower Gardeners

ONE TOPIC of particular interest to home gardeners on the recent Massachusetts Farm and Home Week program was the wildflower garden, discussed by Mrs. Taylor of Dover, Mass. She said that almost all people dream of having a wildflower garden some day with a brook and a patch of woodland, but that really most wildflower gardens have to be created.

Her own has a background of native trees and shrubs, flowering dogwood, sassafras, hornbeam, gray birch, witch-hazel, etc., with choice wildflowers placed here and there. She also uses numerous rocks to help hold moisture and to create a cool atmosphere.

She said that the first requirement for a wildflower garden is a soil rich in humus and unless one will take the trouble to make the plants happy, it is best not to start such a garden. She recommended for a shady garden, hepaticas, bloodroot, yellow lady's slipper, dutchman's breeches, false mitrewort, bishop's cap, columbine, trillium, baneberry, spikenard, rue anemone, and many of the ferns, but said that orchids should be avoided with the exception of the yellow lady's slipper, and the showy lady's slipper.

A sunny bog with a lily pool would provide a home for such things as pitcher plant, monkey-flower, etc. Mrs. Taylor pointed out that many state laws protect choice native plants, hence best results are often obtained from raising plants from seeds and cuttings.

Another wildflower garden is simply native shrubs surrounding appropriate plants in a sunny field. Such plants are butterfly weed, black-eyed susan, rose-mallow, closed gentian, many varieties of the goldenrod and wild asters. The shrubs might include spice-bush, mountain laurel, viburnums, sweet pepperbush, azaleas, blueberries, bayberries, and others.

Since there is still time to move or to identify some of these plants or shrubs for moving later, it is a good idea to do this before leaves and flowers have entirely disappeared.

Grange Cleanings

(Continued from Page 3)

long striven for. The necessary requirements include five new subordinate units, 15 new Juvenile units, a net gain of 500 in subordinate membership and of 200 in the Juvenile roll. Present prospects are that all these specifications will be met.

DECIDED HONOR has come to a prominent Vermont Grange member. Governor G. D. Aiken has appointed Orlando L. Martin of Plainfield as as-

sistant judge of the Washington County Court. Mr. Martin is a former Master of the Vermont State Grange and for several years was Lecturer of the National Grange. He has had wide experience in public affairs, not only in local and county circles, but as speaker of the Vermont House of Representatives, later a member of the Vermont State Senate, and from 1909 to 1913 Commissioner of Agriculture of the Green Mountain State. He has also been prominent in Odd Fellowship

Prayer

By AMY ATWATER.

At sunset
When I knelt to pray,
A singing thrush
Made me forget the words
That I would say.
His song poured out
So much more
Glad some praise
Than my lips could,
I kept quite still
And listened. . . .
I'm sure, God,
You understood.

circles, having headed the Order in Vermont several years ago.

The position of "assistant judge" is a survival of the old English common law and is still retained in this country only in Vermont. Holders of this position function principally in exercising a "common-sense influence" between the technicalities of the law and the rights of the common people. A second Vermonter holding a similar position is Wilmer H. Vaughn, of Middlesex Center, also a prominent Grange member.

A PENNSYLVANIA Grange lecturer, Mrs. Gabriella Schuler of Alleghany County Pomona, No. 42, recently responded to a "hole" in the program of one of the Pomona meetings by the difficult performance of playing the piano with her nose. She did it so skillfully that her fame traveled far and near, and shortly after she was called upon to go to New York and repeat her interesting musical performance over the network of the National Broadcasting Company.

FIFTEEN STATE GRANGES will hold their annual sessions during the month of October, quite in contrast to the custom of a generation ago, when practically all these gatherings were held in mid-winter. Of this group Vermont is the only one in the Eastern section of the country. Eight of the states have biennial election of officers this year.

MORRIS GRANGE, NO. 105, in New Jersey, sponsored a unique project when it chartered an airplane and took a score of poultry men and women from its vicinity, including four 4-H

Club boys, on a trip to the World's Poultry Congress at Cleveland. With them on the trip went several cases of certified eggs as gifts to the mayor of Cleveland from the Morristown mayor; to the county commissioners of Cuyahoga county, Ohio, from the Morris county board of freeholders; to the president of the Cleveland Kiwanis Club from the Morristown club; and to the Cleveland Chamber of Commerce from the Morristown organization.

FRANKLIN COUNTY, Maine, had an interesting feature as part of its Grange Field Day, August 31, in the presentation of an original pageant, "God Save America", under direction of the Pomona lecturer, Mrs. Beatrice Milliken. Grange members and their friends came from a wide area. The pageant was beautiful and impressive.

A CONNECTICUT Grange meeting out of the ordinary has just been held by Bolton Juvenile, when the latter made itself host to all the Juvenile Grange units in the state east of the Connecticut River.

ANOTHER NEW GRANGE HALL in Maine will soon be a reality, the possession of Mariaville Grange in Hancock County. Every Saturday night for a long time this subordinate has been serving a baked bean supper, to which people have come from a wide radius, and in consequence clinking dollars are rolling rapidly into the Grange building fund.

A NEW HAMPSHIRE GRANGE about to observe its 65th anniversary is Stark at Dunbarton, whose celebration date will be October 30. An elaborate program is already in preparation, with a large attendance of visiting Patrons certain.

CHILDREN'S Frequent COLDS

For relieving discomforts of chest colds and night coughs, rub VapoRub on throat, chest, and back at bedtime. VapoRub's poultice-vapor action relieves congestion of upper air passages—eases soreness of chest and back muscles—helps the youngster relax into healing sleep.

For coughing and irritated throat caused by colds, put VapoRub on the child's tongue to relieve the irritation. Then massage VapoRub on throat and chest.

For "sniffles" and misery of head colds, melt VapoRub in a bowl of boiling water. Have the child breathe in the steaming vapors. This loosens phlegm, clears air passages, makes breathing easier. Also massage VapoRub on throat and chest. Millions of families use these three time-tested treatments.

GETTING
MORE
PEOPLE
TO DRINK
MORE
MILK

THERE'S a good deal more to the job of a milk distributor than bottling and delivering milk in the city. There is always the problem of getting and keeping more satisfied customers for the finest milk that is produced in the country.

The man whose picture you see here is Captain Tim Healy, favorite authority on the world's most popular hobby. He is on the air for Sheffield Farms. You can hear Captain Tim Healy's SEALECT Stamp Club of the Air every Monday, Wednesday and Friday, 6:15 P. M. WEA. He is telling thousands of people thrilling adventure stories, news about foreign countries and stories behind the stamps of the world. At the same time, over this same program, people are learning more and more about the milk that is produced on Sheffield farms. This radio program is really the dairy farmer's program—because it is helping to sell more fluid milk to more people.

SHEFFIELD FARMS

TUNE IN the "WEEKLY MILK BULLETIN." Important news and information for milk producers. Every Monday Evening, Station WGY, 6:45 P. M.

"One good thing Maw,—ya won't have to wash the upstairs winder now."

Kernels, Screenings and Chaff

By H. E. BABCOCK.

ONE OF the inevitable effects of a long war, particularly of a war in which the United States becomes a source of foodstuffs and war materials for the belligerents, **is sure to be a shortage of farm labor.**

To complicate an almost certain shortage of farm labor, I believe that we as farmers have every reason to expect a great deal of labor union activity. This, sooner or later, will affect the attitude and the demands for wages of both seasonal and year-around farm labor. It may even result in unionizing farm labor.

A WORD OF CAUTION

During a period of rising prices such as is likely to occur in this country if there is a long world war, the simpler farm products usually tend to rise faster in price than those in which more labor and management are invested. For example, milk for cheese will probably go up faster than milk for the fluid market. Wheat and corn will go up faster than eggs and beef. The tendency of prices to rise in this order usually results in farmers switching rather rapidly to the production of cash crops. This practice in turn upsets normal demand for labor and increases seasonal demand. **In view of what will probably happen to farm labor, those of us who are considering making such a switch may want to be pretty certain that we will have available the help required to handle our new ventures.** Also we may want to remember that while cash crops usually go up much faster than more finished farm products, they also come down much faster when the inevitable break comes.

VALUE OF PRIVILEGES

In any period of rising prices the cost of living goes up. This means that the high wages which attract men and boys from farm labor do not turn out to be as high as they first seem. **It also means that the house, the fuel, the eggs and milk, the hog in the fall, and the garden of the year-around hired man take on a definitely increased worth.**

In view of the uncertainties which are ahead, it would seem to be indicated that farmers who have good year-around men, and hired men who have good year-around jobs have an excellent basis for getting together and talking things over.

In my opinion, as farmers we might plan a little more on giving hired men of proven ability more recognition than they have had in the past, particularly in the way of privileges and in sharing any prosperity which may come to the farm. Hired men, on the other hand, should fully consider the very real wages they get in the way of privileges.

THE GIST OF IT

In view of the uncertainty which is ahead, all northeastern farmers might well pause before they switch their farm practices into operations which will make them more dependent on hired help than they are now, and farm laborers, particularly year-

around men, should study carefully the real wages offered by city employment before they move into town.

My own conclusion is that the safest place for both farmer and hired man is on the farm, and that the safest agriculture is a continuation **with only such modifications as may be handled with the regular crew** of the practices which have proved to be the most sound in the community over the long pull.

* * *

Quality Excellent

Last night, September 18, we had the children all in and had a roast beef dinner at SunnYGables. Of course, there is no news value in such an event, but there is, I believe, news—and important news—in the fact that the beef we ate was killed right here on the farm last December.

The particular roast about which I am writing was quick-frozen and placed in our zero storage box. We have kept a pretty accurate record of what it has cost us for current to maintain a zero temperature in our box. From our figures as nearly as I can calculate it, it cost us 2½ cents a pound to store this six-pound roast for ten months. It cost probably another ½ of a cent a pound to quick-freeze it. Allowing another fraction of a cent for the interest on the investment in the box and the depreciation, we therefore have a total cost of approximately 3 cents a pound for quick-freezing and storing a roast of beef ten months.

We were offered 18 cents a pound for the carcass of the steer from which the roast came at the time it was quick-frozen.

From these figures, those of you who are familiar with wholesale and retail prices of meat can make your own calculations. I can't go any further because I haven't much idea of the retail cost of cuts of meat. Our family has been living almost entirely on poultry, lamb, beef, and pork killed last fall, quick-frozen and stored in our zero box.

Oh, yes! I forgot to say that despite the propaganda which is being circulated against frozen meats, the quality of the roast has not been excelled by any other roast we have ever had on our table. Of course, it came out of an Angus baby beef, raised and fed right here at SunnYGables, which didn't hurt its quality any.

* * *

Drought-Resistant Grasses

I have come to rely on this page as a means of drawing reactions from folks who are interested in what I write about. You may recall that two weeks ago I wondered why plant

breeders had not done something to breed drought-resistant, eatable plants.

Apparently they have, for I have the following letter under date of September 18 from R. E. Culbertson, nursery manager for the Soil Conservation Service. Mr. Culbertson writes:

"As you know, the Soil Conservation Service, in cooperation with Cornell University, has maintained a grass nursery at Ithaca since the fall of 1935. During that time more than 1200 grasses and legumes from all over the world have been tested in order to determine their adaptation, establishment and conservation-utility values for use in the Northeastern states. As a result of this work we now have grasses and legumes for almost every purpose, and I am happy to report that certain of these have made excellent and sustained growth under the droughty conditions of the past season.

"The selections which stood out are tall oatgrass, creeping and non-creeping brome, meadow fescue, orchard grass, Reed canary, prairie lovegrass, birdsfoot trefoil and zigzag clover. These all made growth comparable with the most luxuriant weeds of the neighborhood so we will not have to start any breeding work with weeds to produce edible forage as you suggested in your Kernels, Screenings and Chaff of September 16th. It has been reported that the prairie lovegrass will grow on a billiard ball but I cannot vouch for this."

* * *

Seeding Insurance

We still have had no good rains around SunnYGables and as a result part of the reseedings we made in August are not yet even up.

After considerable deliberation we have decided to attempt to insure at least some fresh pasturage and hay next year by fall plowing several fields, fitting them up, and sowing them in December to sweet clover.

If we have any moisture at all, such fields should produce considerable pasturage next summer and, if we need it, either hay or a crop for legume silage. From past experience we know that

we can seed pasture mixtures in stands of sweet clover and get good catches if we have the right sort of weather. From this experience it would seem that we might also plan on making some hay seedings in the same manner.

At any rate, we are facing a desperate situation and the sweet clover gamble, as I indicated two weeks ago, seems to us at SunnYGables to be about the only way out.

We would rely on wheat and rye instead of the sweet clover if we dared, but most of our fields are so dry that I am afraid fall-sown grain won't have moisture enough to grow until it is too late.

EVER-NORMAL HAY MOW

The time to lock the barn is before the horse is stolen. The time to build up reserves of hay in the Northeast is when it is plentiful and cheap. The fact that we adopted this procedure two years ago at SunnYGables is going to save our neck this winter. We are going into the winter season with a lot of old hay accumulated when the best we could get for it was around five dollars per ton.

I am not reporting this fact for any other reason than to get a lot of farmers who are going to be short of hay this winter thinking about building up ever-normal hay mows, if it ever rains and they get a chance to do so.

There is another conservation measure which seems to me can be applied in the Northeast in the future and to which more attention should be given. I refer to the weight of our dairy cattle. In periods of cheap and plentiful hay and pasturage, I can think of no smarter thing than to manage our livestock so that it puts on a little extra weight. As a matter of fact, we did just this thing with the Guernsey heifers we had bred to freshen this fall and the high condition they were in when they were turned out carried right through the summer without any supplemental feed, and I know was a big factor in selling them this fall.

Incidentally, we have sold most of our Guernsey heifers which were due to freshen in October and November, so far at least another year we will not be back in the business of producing milk.

The picture of the two young horses shown above was taken last spring just after I had bought them at an auction. I am running it here because to my mind it shows horses carrying just about the right amount of flesh to bring the best price. The man who put them in shape for the sale knew his business. Had they been any thinner or very much fatter, I probably would not have bought them.

Conducted by H. L. COSLINE

Valuable Because Rare

"I just read an ad from a concern that buys old books. For example, they state that they will pay \$100.00 for 'Uncle Tom's Cabin' which seems to me too good to be true. I have the book and would be glad to get that much money for it."

Misunderstanding about the sale of old books seems to be very common. There is no question but that some old books are valuable and that there are reliable companies dealing in their purchase and sale. Without exception as far as I know these concerns first require the purchase of a catalog and do not accept shipment of books until a complete and definite description has been sent to them. Prices quoted are for books in first class condition, and for a PARTICULAR EDITION, usually the first edition. Books are valuable not because of their age but because of their scarcity. Some first editions printed years ago are very rare and collectors of old books are willing to pay good prices for them. The chances that one of these rare books is hidden away in your attic are small.

* * *

Sellers of Worthless Stocks Again Active

The National Better Business Bureau has issued a warning that, with the recent increase in prices of stocks, the seller of worthless stocks has again become active. At least 400 crooks engaged in the sale of worthless stock are wanted by authorities. While the majority of them are likely to stay in the city, past history indicates that some are by no means averse to trying their game in the country. The recent upswing in stocks will ease the way for sale of worthless stocks sold on promises of doubling your money overnight.

At least it will do no harm to notify the police if stock salesmen call. If they are conducting a legitimate business, they will have no difficulty in convincing the police of that fact. But, on the other hand, your action may result in picking up someone who is badly wanted by the police authorities.

* * *

More 'Verbal Promises'

"An agent has been in this vicinity selling cooking utensils. He gives a demonstration by cooking a piece of ham from 9 to 15 minutes but does not tell prospective customers that it has been parboiled for 45 minutes. He gets the down payment by telling women that there is no extra charge for carrying the installment payments, but when they receive the goods, they find that there is a carrying charge. He also tells that there is a life-time guarantee but those who purchase the pans find no guarantee."

As far as we can see this agent is operating in an entirely legal manner except for statements made that do not appear to be backed by fact. Even so, the buyer's "comeback" is governed by the general understanding that companies are not bound by the verbal promises made by agents. As to the ethics of the situation, we'll let you draw your own conclusions. It has always seemed to me that the prices charged for many such utensils are high but that is, of course, a matter that must be decided by the purchaser.

* * *

A Good Day's Work

"On August 21 I was working in a field and saw two men jacking up a truck which was standing along the road. I wondered what they were doing, and went to the truck just as the men left to find that the wheel was gone. I got into my car and started after them. I chased them for about six miles at a speed of about 80 miles

an hour, and when I got close enough to them, took the license number and called the State Police. The Troopers caught them, and that night I had to go to court to testify against them. It was reported that the car they had was stolen and that they were wanted in New York State. The Judge told me I did a good day's work."

EDITOR'S NOTE: The Judge was right. The boy who wrote this letter, Andrew Hlubich, is only 17 years old, and he deserves all kinds of credit for the prompt, courageous action he took.

* * *

He Checked Before He Shipped

"Could you please send me the names and addresses of a couple of reliable brokers or commission men of New York City who handle red kidney and jumbo marrow beans? Any information you give will be appreciated."

A list of commission men is available from the Department of Agriculture, Albany. In addition we are glad to check further on receivers. Some commission men have better ratings than others, and some buyers who do not handle produce on a commission basis are not therefore listed in the pamphlet, but have excellent ratings. We are sending our reader this information by return mail.

* * *

Postal Fraud Orders

Some time ago we stated on this page that a fraud order had been issued against Columbian Music Publishers of Toronto, Canada. We were then informed, and so stated on this page, that the company had filed suit in the U. S. District Court for the District of Columbia for an injunction to restrain enforcement of the order. The court directed that mail be held pending outcome of an appeal.

Later the appeal was dismissed, the order of the lower court directing holding the mail was dissolved, and we are informed that the fraud order against the Columbian Music Publishers is in full force. Mail addressed to this company is being returned to senders stamped "Fraudulent: Mail to this address returned by order of the Postmaster General."

* * *

The Post Office Department recently issued fraud orders denying the use of mails to several concerns as follows:

THE WHITESTONE CO., Whitestone, Flushing, N. Y.—This concern advertised to sell through the mails miniature cameras. Numerous complaints have been received by the Post Office Department from persons who sent money but received nothing in return.

LINDAY LABORATORIES, New York City.—This concern sold a preparation advertised to replenish and regenerate the hair growing substances in the scalp. The inspector who investigated this case noted that the top of the owner's head was sparsely covered with hair.

FOUR ORANGE CO. FARMERS IN TERRIBLE ACCIDENT

COMING HOME from a meeting of dairymen held in Syracuse, N. Y., their automobile was wrecked. Two were killed, the others severely injured. Three carried our travel policy so had protection in the time of need. Harold Ayres, local agent, insured them.

MORTIMER L. CLARK — Deceased
Johnson, N. Y.

Mrs. Clark wrote us saying: "It is with sincere and deep gratitude that I thank you for your payment of **\$1,000.00** to the estate of my late husband, Mortimer L. Clark. The policy had only been in force four months."

CRAWFORD E. CLARK
Westtown, N. Y.

"It was a big help to me in these trying times," says Mr. Clark, who received **\$42.86** Weekly Benefit. He closed his letter saying: "I shall always carry this insurance for myself and members of my family. Thanks again for the courtesy and promptness."

H. G. HONEYWELL
Westtown, N. Y.

"After the accident I had plenty of trouble so you can see that the **\$130.00** I drew on my policy was a great help to me. This policy was the only accident insurance I carried. I think anyone who can get it should have the protection," says Mr. Honeywell.

Feeding Them In An Emergency Like The Present Is A Serious Problem

IN THE LAST ISSUE of this paper, G.L.F. reported to patrons the effect of the war in Europe on the prices of grain and feed. Prices which may have been too low were pushed up by a wave of hysterical buying to a level much higher than seemed likely to hold. Heavy buying resulted in the almost complete disappearance from the market of certain ingredients normally used in G.L.F. feeds. This condition is probably only temporary.

To relieve a very acute situation in both supplies and price, a simple 20% dairy feed was worked out and offered to established patrons. This Emergency Exchange Dairy was priced on the basis of the cost of materials already on hand, rather than the present high market cost. Many dairymen cooperated and shifted to this feed. Thousands of tons are being shipped each week.

Shipments of Emergency Exchange Dairy at the price of \$30 per ton, cash-off-car, Rochester-Syracuse rate zone, will be continued for the benefit of established patrons at least until the end of September.

Regular Feeds Priced on Market

On September first, G.L.F. had on hand and in commitments enough ingredients for about thirty days' supply of feed under conditions of normal demand. Buying hysteria threatened to wipe out these stocks within a few days. To protect the feed supply of regular patrons and to insure proper distribution of the profits from increased value of inventories, G.L.F. followed a strict policy of pricing all its feeds, except Emergency Exchange Dairy, on the basis of day-to-day markets.

When prices go up, anyone who

owns a commodity cannot help but make a profit. In a cooperative, such profits are used to build working capital or are returned to patrons. This is illustrated by the fact that G.L.F. has returned to patrons over \$2,000,000 in patronage dividends, in addition to saving up enough capital to carry on the regular business.

Markets Steadier

As this is written (September 20), markets have settled somewhat. Prices are still sharply higher than a month ago and under war conditions no one can guarantee that they may not advance still further. But one thing must not be lost sight of—the enormous supplies of feed and grain available in this country must

eventually find a market at prices which the consuming farmers can afford to pay. It seems almost unthinkable under these conditions that feed prices will not settle down sooner or later at somewhat lower than present levels.

Considering these facts there seems to be no reason for farmers to become alarmed and contract for feed far ahead at present high prices, or to lay in winter stocks which would be subject to rat damage, insurance costs, interest charges and shrinkage.

G.L.F. will continue to operate on the basis of buying materials far enough ahead to take care of normal needs; and it will continue to use this page to report developments to patrons.

Dried Milk Is Scarce

The increased use of dried skim milk in human foods, coupled with the hot, dry summer which reduced production in many areas normally producing large quantities of milk for creameries and cheese factories, has resulted in a serious shortage of dried skim milk and dried whey. One large producer and handler of dried milk products reports that the present shortage of milk powders for animal use is the most serious in his long experience.

Both dried skim milk and dried whey are used extensively in G.L.F. mashes to furnish high-quality protein, minerals, and in particular some of the vitamins which are essential for growth and reproduction.

G.L.F. buyers and research men are seriously concerned with this problem. They point out that there are several milk substitutes which G.L.F. has not used up to the present because ample supplies of milk products have been available at favorable prices. But if the shortage continues it may become necessary to turn to some of these substitutes which careful investigation, now under way, indicates may be used with very satisfactory results.

GET THE JUMP ON NEXT SPRING'S WORK . . . LIME NOW

Liming is one of the things most farmers tackle in the spring. It is not only a job that can be done this fall, but one that is better done now for several reasons—

1. You can drive on the land in the fall with less danger of bogging down.

2. Liming in the fall leaves one less job to do in the busy spring season.

3. Lime has a better chance to react with the soil before planting.

According to Professor E. Van Alstine of the New York State College of Agriculture in a recent letter to growers: "The easiest and best place to lime crop land is on meadow which is to be plowed this fall or next spring. Spread the lime before plowing. The land is firm and spreading is less work at this time than after the plowing has been done."

"If lime is spread before plowing for corn, the plowing helps to mix the lime with the soil. Harrowing, plowing again before seeding down, and other operations on the soil further mix lime and soil together. Furthermore, two years is not too much time to allow before expecting best results from liming."

In the New York Milkshed more lime is applied to new seedings than to all other types of crops combined. "Liming sour soil on dairy farms is highly important," according to Professor A. F. Gustafson, "because home-grown hay and pasture are the foundation of more economical milk production." Liming to grow clover enables the producer to spend less money for feed.

Rates of application for any lime job should be checked with your County Agricultural Agent. Lime is now being furnished to cooperators in the Agricultural Conservation Program for use this fall. Get in touch with your County Agricultural Conservation Office concerning this.

In some parts of G.L.F. territory, limestone meal is trucked from the quarry and spread directly on the field.

It is impossible, under present conditions, to make any statement about markets that events in Europe and at home may not change the next day. Every man must make his own decisions. I personally have to buy feed for 600 hens and about 40 milking cows. After watching the situation carefully for the past few weeks, I have decided to buy my feed supplies this winter as I need them each week, figuring that the average cost will be lower than if I were to buy my entire winter supply at present prices.

GRASS to SOIL— or SOIL to GRASS?

By E. R. EASTMAN

For centuries this plant fed millions of buffaloes, and bound the soils of the plains so that there never were any dust storms. Yes, you have guessed it, it is buffalo grass. Tests so far show that it has possibilities as an eastern pasture grass. Note the way it propagates itself, and you will see why it is hard to kill.

In circle: Lotus corniculatus, birdsfoot trefoil. You are going to hear more of this legume both as a hay and pasture plant.

Each one of these plots (in the government grass nursery at Ithaca) grew from ONE Wild White Clover plant, showing its spreading and pasture possibilities.

7 OR MANY YEARS both scientists and farmers have been trying to make soils fit the grass. They have limed and limed, fertilized and fertilized, drained and drained, and then often ended by giving many locations and soils up as hopeless. But Mr. Ray E. Culbertson, of the Soil Conservation Service of the United States Department of Agriculture, believes that not enough effort has been made to find grasses that fit unfavorable soils, instead of trying to make the soils fit the grasses.

Mr. Culbertson is in charge of a grass nursery and experiment plots at Ithaca, New York, conducted for the main purpose of finding grass plants and legumes that will make good sod on poor soil, not only to control erosion but also to furnish feed. At Ray's invitation last week I went with him to visit this

nursery, and after a half day there I wished every one of our readers could have the same privilege.

Now, everyone familiar with farming knows how important it is to get the best variety of potatoes, or corn, or apples, or of any other crop except grass. But how many people know that there are over 4,000 known grasses in the world? In the nursery at Ithaca there are more than 1,200 different grasses and legumes. It seems reasonable to conclude that some of these are much better for our northeastern farms than those we are growing. The question is how to find the right ones. To me, and I suspect this is true of nearly everyone else, timothy is just timothy, and clover is just clover. But, thanks to the research men in the colleges and department of agriculture, we are just beginning to realize that there is even more difference between varieties of timothy, for example, than between varieties of silage corn. Here is a kind of timothy, to illustrate, that will produce one-third more tonnage to the acre than another one growing right beside it under exactly the same conditions. Here is a timothy that will rust and turn dead before it has completed its growth, while next to it is one that is disease free because it has more resistance. Here is still another timothy that contains more nutrients, more feed value, than the average.

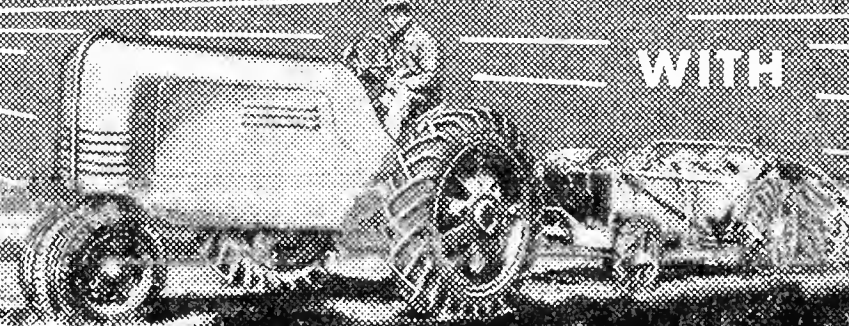

When it comes to other kinds of grasses, how little most of us really know about the possibilities of brome grass, meadow and red fescues, blue grasses that are particularly adapted to our climate and soils, the grasses and varieties that do best on heavy soils, and the other varieties best suited for light, dry, sandy or gravelly soils. WITH

Firestone
GROUND GRIP TIRES

WITH fall litters of pigs to watch, soy beans to thresh, corn ready for harvest, silage to grind, farm buildings to repair and paint, and manure to spread, October is a busy month for the farmer. An hour or two away from the farrowing pen may mean the loss of one or more pigs—yet other farm work must be done.

Thousands of farmers have found that equipping their tractors and implements with Firestone Ground Grip Tires saves two or more hours every working day. And that's only one of the many savings that Firestone Ground Grip Tires provide.

Order your new tractor and implements equipped with these greatest of all traction tires—or, call upon your nearby Implement Dealer, Firestone Tire Dealer or Firestone Auto Supply and Service Store and find out how little it costs to put your farm on rubber by changing over your present steel-wheel tractor to Firestone Ground Grip Tires.

Listen to the Voice of Firestone with Richard Crooks, Margaret Speaks and the Firestone Symphony Orchestra, under the direction of Alfred Wallenstein, Monday evenings, Nationwide N.B.C. Red Network.

NEW LOW-COST PLAN FOR EQUIPPING YOUR STEEL WHEEL TRACTOR WITH

Firestone GROUND GRIP TIRES

Here's a simple, easy, economical way to changeover your steel wheel tractor to Firestone Ground Grip Tires. Just remove the steel lugs and slip a set of dual Firestone Ground Grip Tires over your present steel wheels.

Monthly and High Priest of De-
meter of the National Grange.

NATIONAL GRANGE session at Peoria (Nov. 15-23) will attract special interest because in process of construction in that city is one of the government research laboratories authorized by the last session of Congress. The principal purpose of the laboratory will be devising industrial uses for agricultural products. For many years the National Grange has been advocating extended research work and the increased appropriation, which made possible the new laboratories, of which Peoria is one, was largely the result of persistent Grange agitation.

MASSACHUSETTS will see all Grange roads leading toward Dover, Tuesday evening, October 17. On that evening a class of candidates to be initiated into Dover Grange will include Governor Leverett Saltonstall and Mrs. Saltonstall. The Massachusetts chief executive has frequently commended the Grange for its influential stand on Massachusetts public questions.

IN VERMONT the stage is set for the 68th annual session of the Vermont State Grange, to be held in the city hall at St. Albans, October 17-19. This is the first time the state session has ever been held at St. Albans and that busy little city is making extensive preparations for the entertainment of its guests. The principal address this year will be given by State Master David H. Agans of New Jersey, Overseer of the National Grange, and representing that body.

WINDSOR FAIR in Maine, in addition to staging a big Grange Day this year, offered liberal cash prizes for subordinate Grange exhibits and the latter were numerous and attractive. First prize was won by Arlington Grange of Whitefield, China second and Windsor third. Grange exhibits were also a prominent feature at the Maine State Fair in Lewiston and first honors were carried off by Thorne's Corner Grange.

ALL RHODE ISLAND Patrons extend sympathy to former State Master J. Curtis Hopkins and Mrs. Hopkins over the sudden death of their son, a fine young man of great promise. This occurrence is the more deplorable because within the past two years a daughter of the family has died and another son was burned to death by a gasoline explosion.

HOMER GRANGE in Cortland County, N. Y., sponsored a tent caterpillar contest this season for the Juveniles, offering cash prizes for the largest number of nests collected. The result was more than 1,000 nests brought in and the youngsters were very enthusiastic in carrying through this commendable community service project.

SEVERAL CONNECTICUT Granges have been fortunate in having United States Senator John A. Danaher as their guest speaker. He has given some very timely addresses, stressing many of the important matters pending at the National Capital. Not only is Senator Danaher an enthusiastic member of Hemlock Grange at Portland, but he was its master when elected to the United States Senate.

“And the Waters Under the Earth”

By
ROMEYN BERRY

THERE is a wet spot in our North Lot which has annoyed the owners of our farm from time immemorial. Mr. Harrison, from whom we got the place, told us lots of times that his grandfather, who moved on to it in 1844, used to get mad at that wet spot periodically and spent days and weeks trying to ditch it and drain it. But nothing did any good, he said, and Mr. Harrison advised us to let it alone and accept the wet spot as it was.

We let it alone for three years. But a wet spot is a continuing, provocative challenge on any farm, and when the Great Drouth of 1939 came along and seized us in its grip; when the little spring brook dried up “and the fountains were themselves athirst”; when the cows refused to be driven to a dusty, sterile pasture and looked at us reproachfully; when each burning, cloudless sunrise served only to introduce a new day of increasing dread—then Elmer and I decided to have a try at the wet spot in the North Lot ourselves.

It was not that we expected to succeed where Jephtha Lee and Reuben Jewell had failed, where three generations of Harrisons had been defeated between 1844 and 1936; but we figured we'd never have a drier time in which to explore the mysteries of the wet spot in the North Lot, and anyway the work would take our minds off a sick farm and the frightened eyes of our animals.

What, if anything, we have done to the wet spot in our North Lot, it is still too early to determine, but a half day's labor down there served at least to make us the humble instrumentalities in the working of a miracle, the like of which has not been seen since Moses smote the rock and the waters gushed out of it to sustain the children of Israel. For, three feet under the surface, we struck a great stone which, being removed, disclosed an ancient hollow log set in the perpendicular, and down in the dark depths thereof, the stirring of living water.

That was a pretty exciting discovery, I can tell you, and we dug away at it (the neighbors helping) with all the frenzy of escaping prisoners until we were down in gravel and had uncovered a bubbling spring which flowed lavishly in the driest season of recorded time.

“I’m pouring back what we didn’t use, Mr. Johnson.”

Four days sufficed to lay bare this unsuspected fountain of the earth and to wall it up and prove its flow in quantities sufficient to provide for all our needs, and for the neighbors, too. Then, and then only, could we sit down calmly and speculate upon the unsuspected spring and upon the mysterious

pioneer who had hewed out the basswood log which housed it for a century and more down underneath the cat-tails and the flag. It wasn't any of the Harrisons and it couldn't have been Reuben Jewell, and when you go back of Reuben Jewell, you are getting pretty close to panthers and Indians and to Jephtha Lee, the veteran of Washington's army who cleared our land in the last decade of the eighteenth century.

With the aid of land maps and deeds and our own poor powers of deduction, we've about decided that none of the previous owners of our farm (there were only five of them) developed the spring in the North Lot and hewed out the basswood log to house it. If any one of these had been aware of its existence, the knowledge would surely have been handed down to Mr. Harrison's grandfather in 1844.

We lean rather to the theory that it was a squatter and a forest runner who dwelt here for a season and then moved on further toward the sunset (first clearing up his litter and covering his spring) at the approach of Jephtha Lee with his legal title, his brass earrings and his Yorktown musket.

But whatever its origin, we're still a little shaken and emotionally stirred by the discovery of this ancient, un-

suspected fountain underneath our farm, its dramatic discovery at the crucial moment of our task. The hurricane, the lightning bolt, the flood and all other natural catastrophies that overtake the hapless dweller on the land, strike without warning, and by the very shock of their unheralded descent, supply an opiate against the agony and terror they create. But drouth toys with its victim—teases and tortures him—as it offsets increasing dread against dwindling hope, and forces him to stand and watch his farm and the work of his hands sicken and die in the manner of a fever-stricken child for whom he can do nothing. It saps his endurance and weakens his spirit to resist.

And then in our case—think of it! When help from the skies failed utterly, the earth beneath our feet opened and a fountain burst forth! Who shall say that the age of miracles is over?

It is true that the spring in our North Lot cannot save our seedlings, change our little nubby peaches into big ones, or do much for our golf-ball-size potatoes; but it has saved our hope and faith and self-respect, for it “turneth the wilderness into a standing water and the dry ground into water springs.”

FOR YOUR OWN FEET'S SAKE

Make these tests at your Goodrich Dealer's!

Stretch them!

Do this yourself—or ask the dealer to do it. The amount of “stretch” in a Goodrich Litentuf Work Rubber is astonishing! Easy on and off and snug-fitting too!

WORK RUBBERS! ARCTICS! BOOTS, Plain or Lace!

You can get every kind of rubber footwear a farmer uses in Goodrich Litentufs! Every model is light-weight, flexible, stretchable, and much more comfortable. You'll find yourself much less tired at the end of the day with Goodrich Litentufs.

SHORT ON WEIGHT, LONG ON WEAR!
Special Goodrich processes take the weight out, leave the wear in. Actual farm tests prove this. And remember, Litentufs are backed by the unsurpassed workmanship in rubber of B. F. Goodrich! You get more value for your money!

GOODRICH FOOTWEAR, WATERTOWN, MASS.

Measure them!

Litentuf Work Rubbers give you all the protection of ordinary 2-buckle Rubbers without any buckles to bother about!

Slip them on!

See how quickly Litentuf Work Rubbers fit over your shoes!—they're so flexible, so “stretchy.” No more skinned knuckles from putting on heavy rubbers—no time wasted fumbling with buckles!

Goodrich *Litentufs*

1

This advertisement (one of a series) explains the convincing tests you can make yourself on Litentuf Work Rubbers. Similar tests can be made on Litentuf Boots and Litentuf Arctics.

THE *Editorial* PAGE

BY E. R. EASTMAN

Address all mail for Editorial or Advertising departments to American Agriculturist, Savings Bank Building, Ithaca, New York.

Wake Up, Americans!

THE COMMITTEE for the Nation, composed of many representative citizens of America, whose chairman is Frank E. Gannett, is right in calling attention at this time of the leaders in Congress to the danger to the American people of concentrating so much power in the hands of the President of the United States. Did you know that the President has as much power in many ways as any of the dictators of Europe? Don't believe it? Look at these facts:

The President of the United States can:

1. Close all banks of the nation.
2. Close every stock exchange, and forbid for 90 days at a time the sale of stocks and bonds.
3. Prohibit export of coal or other war materials.
4. Restrict travel between the United States and foreign countries.
5. Suspend the eight-hour law on Federal contracts.
6. Within certain limits, further revalue the dollar.
7. Reduce the weight of the standard silver dollar.
8. Commandeer all silver now in the hands of the people as gold was commandeered in 1934.
9. Regulate rates of exchange of all foreign currencies and the amount of such currencies that American citizens may acquire.
10. By declaring that an emergency exists, which President Roosevelt has just declared, he has absolute, unlimited power to stop free speech over the radio. He can take over the entire radio broadcasting of the nation, he can suppress public discussions by radio of views contrary to his own, he can seize any or all broadcasting stations and turn them over to any department of government, for example, to Secretary Ickes, to be run as instruments of Administration propaganda. Hitler has the same power, and no more, over radio in Germany, and he used it to gain a dictator's throne. Stalin has the same control in Russia, Mussolini in Italy. Control of radio has been a stepping-stone to dictatorship in Europe.

While Congress has the direct power to declare war, the President can by his broad powers force us into war.

Congressman Dies, Chairman of the Congressional Committee to investigate the "isms" and radicals of the United States, charges that there are Communists on the Federal payrolls. Those with behind-the-scenes information in Washington claim that radicals have the ear of the President and determine many of the policies.

In any case, whether these statements are true or not, they *could* be true with any President, and emphasize the fact that at the first upset, such as war, any President could, if he wished, become dictator. Thus the American people would lose the liberties and the heritage second in value only to life itself, and Democracy would be lost to the world for another thousand years.

If any of these broad powers are necessary at all in government, no one man should have them,

but they should rest in Congress, which is directly responsible to the American people.

These facts emphasize two principles: First, America must stay out of war so that there will be no reason for the President to exercise emergency powers; and second, the people must insist on decentralization of powers in the executive department of our government. Wake up, Americans, before it is too late!

Why Lose Nearby Potato Markets?

WITH the beginning of the earliest white settlement in America, that newly discovered vegetable, the potato, became a staple food. It has been so ever since, and rightly so, for a good potato ranks with milk, bread and meat as a fundamentally necessary food.

Yet in recent years consumers are eating fewer potatoes, substituting other products for them. Frankly, I believe that producers are partly to blame for the lessening consumption of potatoes. Talk with almost any housewife in many villages or small cities in the Northeast and she will tell you with some emphasis that it is almost impossible to get good quality potatoes. Without a good cellar, or with one that is hot because of the heating apparatus, it is not possible for consumers

to store potatoes, nor are they well kept and handled in retail markets. The result is that the winter is not far along before many potatoes turn as black as the ace of spades when they are boiled. You cannot expect consumers to show much interest in a potato, either, that has a black hole on the inside, nor in one that is watery and squashy on your plate. So what do these consumers do, even when they want to be loyal to their own state growers? They either cut their supply of potatoes and eat substitutes, or they buy a potato, even though they have to pay considerably more for it, that comes from some other section.

Now, most potatoes are of good quality, but up-State markets apparently don't get them. So I cannot understand why the growers cannot manage some way to give the consumers who live right under their noses a potato that will make them come back for a second batch. Why not take a look at the possibilities of these nearby markets?

Remember Those Apple Dumplings?

WHEN I was a boy, the family used to dispose of nearly a panful of apples every evening. In addition, we had plenty of baked apples, apple pies, and apple dumplings. It makes my mouth water to think of the apple dumplings that Mother used to make!

It's too bad for everybody that folks are not eating as many apples now. Instead, we are eating fruits brought in from other sections no better than apples, and in some cases not so good.

—Photo by courtesy of Clarence Evans.

This is the Washington Oak, located at Gaylordsville, Connecticut, one of the most famous trees in America. It was a large tree when General George Washington and his staff held council under it on September 30, 1780. They were on a trip from Peekskill to Hartford on horseback.

The tree is cared for by the Connecticut Daughters of the American Revolution.

Let's make a resolve to help ourselves and our fellow farmers who grow apples by eating more apples this winter. Turn to the Household Page and try some of the tested recipes for making delicious things from apples. Send for our bulletin containing more apple recipes. It's free for the postage.

Eastman's Chestnut

GATHERED around the stove in the back part of a Vermont grocery store were several farmers, bragging about the big messes their cows gave. One old fellow had little to say until finally one of his companions said to him:

"Bill, you haven't got but one cow, but how much does she give?"

"I don't rightly know", said Bill.

"That's funny, why don't you know?"

"Well, you see it's like this. I go out and sit down to old Betsy, and I milk and I milk and I milk, until the wife hollers down and says:

"Bill, I guess you got enough for this time. Better come on in!"

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR FARM PRODUCTS.
3. LOWER FARM TAXES.
4. A GOOD LIVING FOR EVERY FARM FAMILY.
5. MORE FUN ON THE FARM.

Steuben County Dairymen Save PREPOTENT SIRES

BY WILLIAM S. STEMPFLE

A GROUP of enterprising Steuben Co., N. Y., dairymen recently won distinction for themselves and their county in organizing four cooperative bull associations in two days.

In fact, they established three records! In the first instance, no other New York county has more than three such groups, and Steuben now has six. Another credit mark is due to the fact that two of the rings are Ayrshire herds, the first of the Scottish breed to be formed in the state. And the third record is that never before in his experience, (and he has been doing that sort of thing since 1916) has Prof. S. J. Brownell, Cornell dairyman, officiated at the organization of as many as four groups at one time.

This development has been no mushroom growth, nor is it the spontaneous acceptance of a new and novel idea. It is based on the successful experience of the group of farsighted dairymen who organized in 1935 the first Steuben Holstein Bull Association. In its short lifetime this association is responsible for having proved and kept alive and vigorous Fobes Sir Colantha, whose daughters excel their dams by 64 pounds of fat.

Save Good Bulls—Discard Bad

Four years old when the group was formed, Fobes had already served the usual term in the S. H. Lyke herd and was due for the discard because he had been bred to the entire herd.

But Fobes, who gave to his daughters well proportioned and sturdy bodies, was accepted by the other members of the ring, Clair, George and Bert Bennett of Howard, and I. J. Calkins and Kenneth Mattoon of Neil's Creek. And it was well they decided to keep Sir Fobes because nine

of every ten of his daughters are better than their dams. Fobes, and others like him, is the answer to the breeder's prayer, a sire that builds rather than tears down production.

A breeding program is a process of culling which puts undesirable sires in the discard. The minutes of the last annual meeting of the first Steuben Association include the death sentence of Evergreen Carnation Dewdrop, for the good and sufficient reason that his daughters are not of the desired type and because Evergreen is a shy breeder.

The daughters of the fourth of the original sires, Dexter Pontiac Ormsby, do not show promise of the desired production so this bull also went to the block.

Junior Sires Well Bred

Not until last fall when two promising young herd sires were purchased has any money been spent. Previously all members of the group had

FOBES SIR COLANTHA, proven sire of the First Steuben Holstein Bull Association, who has demonstrated his ability to transmit high production, his daughters yielding 64 lbs. fat more than their dams.

simply exchanged the sires owned at the time the group was organized.

For \$700, (the discarded bulls netted \$225 and the difference was raised by assessment), two richly bred youngsters, Cornell Pride 25th, and Prilley Bessie Sadie Vale, sons of proven sires and of cow families of uniform high production, were purchased last December. These young bulls are to be rotated at about a four-month interval, (the older bulls move every second year) so that each herd may have a sample of the blood. They will not be placed in heavy service until, through the daughters, they are proven to be proficient breeders.

A Boon to Small Breeder

The proving of sires is a major problem to the small breeder for the obvious reason that

(Left): The owners of the three herds that were high in butterfat production in Steuben County Herd Improvement Associations in 1938. Left to right: Floyd Soper of Hornell, owner of the high Ayrshire herd; Burton Ketch of Wallace, high Holstein herd; and Harry Sanford of Savona, high Jersey herd.

(Below): Two of Steuben's Bull Associations are composed of Ayrshire breeders as might be expected since this region is noted for its Scottish cattle. Pictured from the left are: Lawrence Parks, Harold Stanton, and Lester Schwingel, members of one of the Ayrshire groups.

Members of the Second Steuben Bull Association. Seated, from left to right, are: Vincent Kurtz, Cohocton, president; Charles Babcock, Prattsburg; and Burton Ketch, Wallace, secretary-treasurer. Standing are: L. J. Keeler, Wallace; Ed Wetmiller, Cohocton; and Fayette VanWormer, Wallace.

he cannot afford to keep bulls over the trial period. Again he can ill afford to breed extensively an untried and unproven bull from which inferior daughters might be got.

A practical solution to the problem is to join with other dairymen in a cooperative bull association as a means of dividing the risk, and to perpetuate the lives of bulls that can not immediately be used again in the individual herd.

Essential to a successful bull association is a group of dairymen who desire to cooperate in a long time program of herd improvement, who think somewhat alike as to the desired level of production and as to type and quality, and whose herds have a similar health standard.

Steuben dairymen are enthusiastic about the possibility of herd improvement through cooperative bull associations. They recognize this simple and practical arrangement as the only means by which the small breeder can 'prove a living sire' and thus carry on a constructive breeding program.

Steuben will have more cooperative bull associations in the future.

Here's what gives value to your crops!

YOU haul your crops to town and sell them—and so far as you are concerned the transaction is ended.

But it is ended only because those crops, and the products made from them, can reach their final markets, usually at far-distant points.

And that's where the railroads come in, with their real super-highways of today and tomorrow, built and maintained by private enterprise, stretching into every part of each of the 48 states.

Do you know that the railroads are called upon to haul more than eight times the tonnage moved by any other sort of common carrier? Do you know that on their super-highways a single freight car can carry 50 tons—a single freight train, 5,000 tons or more? And that the charge for all sorts of freight averages only about one cent for hauling a ton one mile?

That's the sort of hauling which it takes to move America's crops to market. No other form of trans-

portation can do the job the railroads do.

The fact is, the American railroads provide the most modern transportation in the world—mass transportation by means of a single power unit pulling a long train of cars over a steel highway used for no other purpose but mass transportation. Without this mass transportation by the railroads a large part of the crops produced in the country would never leave the farm.

While railroads have been doing our hauling since oxcart days, they have kept pace with the times by constantly improving and modernizing their tracks and equipment. The billions of dollars invested in improved facilities have been railroad dollars—not tax dollars. For railroads build their own tracks, maintain them, and pay taxes on them.

When you look at the record of the railroads and the job they are doing, you can see why government should give all carriers equal treatment and an equal opportunity to earn a living.

Gossip from the APPLE ORCHARD

WHEN it comes to selling apples, color is becoming more and more important. Recently, while I was walking through the orchard of Frank Beneway, Ontario, Wayne County, N. Y., Frank emphasized the relationship of good foliage and good color. Said he: "I sometimes hear the thought expressed that apples color better when the foliage is not too thick. I think that is wrong. In my opinion, it is necessary to have plenty of healthy leaves to manufacture the food necessary to mature apples properly."

That sounds like common sense. It is true that an unthrifty tree will sometimes bear a crop of small sized apples with high color, but frequently it is nature's last attempt to grow a crop before the tree gives up.

There is, of course, some relation between applying nitrogen too heavily and lack of color. However, the chances are that more people feed trees too little than too much.

Some growers are putting apples under the trees to give them additional color. I recently noticed this in the orchard of James Case, Sodus, Wayne County, N. Y. A block of Wealthies had been picked and put under the trees for a couple of days. Mr. Case pointed out that it was essential that the apples should not be in direct sunlight. It is generally admitted that coloring on the ground adds nothing to the keeping qualities of apples, but where a choice must be made between color and keeping qualities, it would seem that color is the more important. Incidentally, a cool sunny day is much better for adding color than a day when it is sunny and hot. Where possible, Mr. Case likes to turn the apples over at least once.

Removing Spray Residue

Mr. Case is an advocate of washing. Several years ago he had a test made on fruit, found the spray residue was considerably over the tolerance, and bought a washer. His packing house is conveniently arranged, and he says that it requires no more labor to wash apples than it does to put them up without washing. Some valuable experimenting has been done to develop a spray schedule that will control insects without washing. Success has attended these efforts, the "nigger in the woodpile" being that a non-residue program is more costly.

Incidentally, all that is necessary to start an argument with the average western New York apple grower is to mention spray residue. The opinion in that area, and we expect in other areas too, is, first, that the tolerance is too high, and second, that some inspectors are inclined to pick out the smallest apples for test, which naturally have more surface in relation to total weight and, therefore, contain a bigger percentage of residue. Incidentally, many growers doubt that any scientific evidence is available to show that a single consumer has even been harmed by spray residue on fruit.

Mr. Case puts up a fine pack of apples. He has sold for years to the same

New York City buyer, with satisfaction both to himself and to the dealer.

Fan for Common Storage

I also stopped at the farm of M. N. Wadsworth, Oswego, Oswego County, N. Y. Mr. Wadsworth has a dairy and grows fruit. Part of the apple crop is kept in common storage. The storage is in a basement which is well banked on one side—in fact, only one end of the building is really exposed to the weather. The interior has been covered with roofing paper and boards, the floor is dirt so moisture conditions are

No, they are not windfalls. Mr. James Case of Sodus, N. Y., picks them and adds color by leaving them under the trees for two or three days.

favorable, and Mr. Wadsworth says the apples keep in good shape.

He follows one management practice which is not universal. There is an outlet flue at the top of the storage which goes clear through the roof, and in the fall an electric fan is placed in this outlet to pull air out of the storage. As is common practice, the storage is open during cool nights and closed during warm days.

There appears, however, to be a distinct trend away from common storage and toward cold storage, as well as considerable interest in recent experiments on modified cold storage in an atmosphere containing more than the normal amount of carbon dioxide. There are still some wrinkles to be ironed out but in August I saw some McIntosh that had been stored in an atmosphere high in carbon dioxide and they would tempt any consumer.

—H. L. C.

"I don't know what we would do if they didn't have these places where we could come in and rest our feet."

SAFE CALVING

This Plan Is Made To...

1. Keep Down Calving Troubles
2. Get Extra Milk after Calving

We all know the high cost of troubles which come or are started at calving time—udder troubles...slow cleaning...milk fever...breeding failures. On many farms these difficulties cause so large a loss in milk and good cows that they "steal" most of the profits the whole herd should make.

Fortunately, there's a tried and proved plan to help keep down these troubles. It's the Purina Dry & Freshening Chow Plan of managing and feeding dry cows for 60 days before calving. Dry & Freshening Chow is made to build back condition milked off in the last lactation. It is made to build up strength and resistance—to help cows calve and clean quickly and to throw off udder congestion.

Condition put on by Dry & Freshening Chow also steps up production after freshening. At the Purina farm we put about 100 pounds weight on a cow while dry. This 100 pounds makes from 2,000 to 2,500 pounds *extra milk*, as compared to cows not conditioned before calving.

The Purina Plan is easy to follow. And the cost is *low*. Takes only 5 to 8 bags Dry & Freshening Chow for the average cow. See your Purina dealer. Try Dry & Freshening Chow on your next dry cows. See how well they calve, clean and start off milking.

ABOUT BIRTHDAYS

BACK in the country whenever I had a birthday, my dear old sainted mother always said to me something like this: "Willie, you are nine years old today. Remember now you are going on ten."

When a man has a birthday and is sixty-nine years old, as I was a few weeks ago, and is "going on seventy," he is entitled to certain privileges not accorded a younger man. He may, for instance, presume upon his years to discuss with his friends the matter of LIVING from a very personal, but practical, viewpoint. Certainly if I have discovered anything that makes Life more worth while, it is my responsibility to share my experience with others.

A friend of mine, James E. Mooney, President of Beaver College, told me of a visit he had long ago with Henry Van Dyke. As he was leaving, the home of this great man he felt a friendly hand on his shoulder, and heard these words: "I am about over the trail, and you are just at the beginning, but whether at the beginning or the end does not matter. It's how you and I have used, or will use, our trails which counts."

LIVING is such a thrilling adventure to me that I long to get over to others some secrets that I have discovered. I feel that I have found a great treasure located right in my back yard, and also in the back yard of everybody I know, and I ought to be rushing breathlessly from door to door to tell them about it.

So, whether you are a young man or young woman just starting out in this great adventure, or whether you are in middle age with the responsibility of rural leadership or homemaking on your shoulders, or whether you are in the autumn of life, I want to share with you some simple, fundamental rules which I feel work in life's great adventure.

Along the trail of life I have always tried to be three people. There have been many forks in the road where decision has been necessary. At times I call in my Yesterday, the voice of Experience, which recalls both defeats and victories. It says, "Anyone can travel the easy way. The fun, however, is in getting to destination, which often means a hard climb over many obstacles." When my Yesterday says: "Take this fork," I take it, because I believe Experience is a wise teacher. Later on I come to other forks in my road. Then my Tomorrow comes to my rescue and because of its Vision directs me toward my goal. But it takes my third self, Action, to make me follow the direction that the Experience of Yesterday and the Vision of Tomorrow point out. These three . . . Yesterday, Tomorrow, and Action . . . have helped me work out a life philosophy which is an all-embracing Religion with a Four-Fold program to keep

My Body Strong (fight weakness)

My Mind Alert (fight ignorance)

My Personality Agreeable (fight a grouch)

My Character Upright through Truth, Honesty, Purity, Unselfishness, and a deep Faith in God (fight sin).

To sum it all up, to me, body, mind, personality, character, home, church, business, and, in fact, every activity of life is Religion—all together with one great obsession to bring the Kingdom of God here on earth.

What do you do on your birthday? Make resolutions? Or what? Maybe you can help me in my next Column which will contain more birthday thoughts.

How to meet the DROUTH CRISIS

This summer's drouth has brought about a serious short roughage problem. The situation calls for special feeding strategy or you'll pay and pay for high-priced hay to carry through the winter, and pay in low milk production.

Here's how to save on feeding bills. "Piece-out" your hay and silage with TI-O-GA BIG BAG Dairy Feed, the ideal succulent feed when pastures are poor, hay is short, or silage is low.

TI-O-GA BIG BAG, a very bulky feed (5 bushels to the bag) contains 35% roughage consisting of high grade Alfalfa Meal and quality Dried Beet Pulp. BIG BAG fed now will help you take advantage of better milk prices. New booklet describes complete profit-making program. Send for it TODAY!

Grass to Soil—or Soil to Grass?

(Continued from Page 1)

What are the real possibilities of the different kinds of orchard grasses and red tops? In particular, how do all of these grasses and legumes stand up under drought conditions?

Mr. Culbertson showed me varieties of grasses and legumes that were perfectly green after the terrible drought we have had in this section this summer, while next to them were other varieties completely destroyed or injured by the drought.

Birdsfoot Trefoil Is a Comer

When it comes to clovers and legumes, we have not begun to scratch the surface in their possibilities for our northeastern meadows and pastures. *American Agriculturist* has already several times pointed out the possibilities of the comparatively new legume in this section called Birdsfoot Trefoil. But there is more than one strain of trefoil. Which is best? Under Mr. Culbertson's direction at Ithaca there are several plots of trefoil strains growing in his tests which will make good hay, and there are other low-growing varieties for pasture purposes. One of the big possibilities of trefoil is the fact that it will grow on acid soil without liming. This illustrates Mr. Culbertson's point that what we need is to find grasses that will suit our soils without having to build the soils to fit the grasses.

Most farmers do know, sometimes from sad experience, that certain varieties of alfalfa and all southern-grown alfalfa seed will not stand our northern winters. In the government plots at Ithaca there is an interesting test showing alfalfa grown with smooth brome grass which promises an economical pasture mixture. It has been found that seeding of 8 pounds of alfalfa with 5 to 7 pounds of brome grass gives good results. The alfalfa can be sown by a seed attachment, but the brome grass is better sown by hand or with a hand seeder. The mixture eliminates the danger of bloating from alfalfa alone, is very palatable, high in feeding value, and there is no need to keep the pasture grazed closely to keep the grass palatable.

Alsike Can Take It

Continued experiments with alsike clover show why it is popular. "It can take it!" It stands up to wet and acid conditions, and is less susceptible to disease than red clover. It fits unfavorable soils.

Crimson clover, also, probably has more possibilities than have been tried in northeastern farming. It is a good soiling crop, has hay and pasture possibilities, and is a soil builder. Crimson has a lower lime requirement than alsike clover, and will thrive on a wide range of soils.

I was much interested in another clover which I saw in the government nursery at Ithaca, because it had a blossom exactly the shape of a straw-

berry, and for that reason is called strawberry clover. It is a perennial similar to white clover, and good to grow under wet, swampy conditions where white clover will not grow.

Some other varieties that farmers are going to hear more about in the future — grasses that show promise — are:

Tall Oat Grass, Reed Canary, Meadow Fescue, Red Fescue, Creeping and Non-Creeping Brome Grass, Pasture and Hay Orchard Grass, Plains Love Grass, and most of the western grasses, including Buffalo Grass, Crested Wheat Western Wheat, Grama Grasses, and Blue Stems. All of these made an excellent growth during the past dry season.

How Many of These Legumes Do you Know?

As for the legumes, here are the names of just a few growing in the government nursery at Ithaca which show promise:

Alsike, Crimson, Strawberry, Yellow Suckling, Subterranean, Sweet, Hubam, White Clover (the shamrock of old Ireland), Black Medick, Birdsfoot Trefoil, Lespedeza. There are four varieties of White Clover, as follows: Ladino, Giant or Mammoth White, White Dutch, (intermediate between Ladino and Wild White), Wild White, and New Zealand. Professor Johnstone-Wallace of New York State College of Agriculture, and other scientists, have made a great contribution in recent years by demonstrating the use of Wild White Clover for northeastern pastures, and in connection with other pasture improvement practices.

In addition to the above, some strains of common grasses have been developed, including four strains of Kentucky Blue Grass, a Creeping Timothy, a strongly Creeping Red Top that has fine leaves, and a Creeping Alfalfa. Experiments and tests have also shown that some strains of common grasses are resistant to disease while others are very susceptible. In other words, some of the failures of common grasses under unfavorable conditions are caused by disease rather than by anything that is inherent in the plant.

When a farmer reads an article like this about new and better farm practices, if he is progressive he says, what can I do about it? That is a fair question, because too often the scientists and experimenters get some good results in their work and then stop short of getting this valuable information out to farmers so it can be used. Well, so far as these new grasses and strains that are being developed in the government nursery are concerned, seed of those that prove best is being increased as rapidly as possible. Small amounts of seed of the good strains developed in the nursery are distributed to farmer cooperators and to seed

DIRECT relief for Sprain

—keeps horse plowing

When your horse gets a sprain, use Absorbine at once! It helps to keep the horse in the traces.

Where Absorbine works

Absorbine sends an increased supply of blood through the injured part to carry off the congestion. Gives direct relief to the sore muscles and ligaments. Apply frequently during the work period. Will not blister. Used by many veterinarians for over 40 years. \$2.50 a bottle. W. F. Young, Inc., Springfield, Mass.

ABSORBINE

For relief of Your Own Strains, Muscular Aches and pains, use Absorbine Jr.

WATER BUCKETS

The best and most economical on the market is the opinion of users for the past 50 years. Nothing to wear out. Impossible to flood the barn. Fresh water before the cows at all times. Water drained from basins without their removal. Will not make the cow's nose sore. Send for circular and price list.

FEEDING Grass Silage

"In the spring cows will produce a fair amount of milk on pasture grass alone. Of course, it is generally agreed that a cow that gives 40 lbs. of milk a day has to have some grain along with pasture. What I can't understand, however, is why a man couldn't put up all of his hay in the silo and why a dairy herd wouldn't give excellent winter production on grass silage and a good grain ration."

THIS theory was advanced recently in a group of dairymen who were discussing cows and milk. Without giving any definite reasons, several men thought it wouldn't work. Later the idea was presented to Professor E. S. Harrison of the New York State College of Agriculture, who immediately pointed out a number of weak spots in the proposition.

Succulent grass, such as we have early in the spring or late in the fall, is very low in fibre, very high in protein and highly digestible. Even so, a cow finds it impossible to eat enough grass to produce more than 40 lbs. of milk and also maintain her body weight. We make up the difference with a grain ration. It is interesting to note that heavy producing cows on pasture seem to enjoy a little good high-quality roughage even when pasture is abundant. The same has been noted with growing heifers who, after a time, will leave the best pasture and nibble away at dry hay.

As compared to succulent grass, hay silage is lower in protein, higher in fibre and less digestible. To an even greater degree than with pasture, a cow is unable to consume enough grass

silage, when fed as the only roughage, to maintain production and body weight.

Then there is the question of variety. You wouldn't like an exclusive diet of potatoes and a cow would get tired of grass silage three times a day.

There are other objections. This year in some sections the hay crop was very poor due to dry weather, but the corn crop was fairly good. Having both corn silage and hay was a form of insurance. If some men had depended on hay alone, they would have been even shorter of feed than they are now.

Distribution of farm labor—that is, keeping the help busy without bearing on too heavy at any one time—is an important element of farm management. The growing of corn silage and hay, plus the putting up of grass silage under certain conditions, gives a much better work distribution than could be secured by attempting to have all of the land in grass and putting all of the hay in the silo. Anyway, on a big dairy farm there just isn't time enough to put all the roughage needed by the herd into a silo. At least not while the grass is in just the right stage to make the best silage.

Grass silage has its place, but it appears that it will never entirely replace hay.

There are also some new wrinkles in putting up dry hay. For example, there is baling in the field. This method saves on storage space, is an efficient way to harvest hay, and baled hay is handy to feed. There's a smaller fire hazard, too.

Grass to Soil—or Soil to Grass?

(Continued from opposite page)

growers associations, who try them out under practical farm conditions, and increase the supply of seed. It takes some time, of course, before seed of a new variety or strain can be put on a commercial basis.

What You Can Do About It

Owing to the good work that has been done for years by the colleges and departments of agriculture, we do know much more about grass and legume seed than we once did, and there is much information available about the right varieties, strains and mixtures to use on different soils. So, if you are interested—and what farmer isn't?—and if you live in the northeastern states, I suggest that you write to Mr. Ray Culbertson, Soil Conservation Service, United States Department of Agriculture, Ithaca, New York, or to *American Agriculturist*,

Ithaca, New York, or to your own college or experiment station, and ask for any information on grasses and legumes for meadows and pastures, and for the best combinations of mixtures for your soil and conditions, and also for general suggestions on pasture and meadow improvement.

Vegetable Crops

A New Book by Homer C. Thompson.

ONE OF the latest books to come to my desk is "Vegetable Crops" by Homer C. Thompson, head of the Vegetable Crops Department at the New York State College of Agriculture. This is the third edition of the book, the second edition being dated December 1930. The new edition brings the book up to date by including results of experiments with much entirely new information discovered since 1930.

"Vegetable Crops" is well organized. It is not a volume to read through in a sitting for entertainment. It is a book to be read in installments, remembering that too heavy doses of concentrated food, either for the body or mind, may result in indigestion. It is a book to keep on the shelf for reference because in it can be found the latest information on the problems, both in production and marketing fields, that trouble the commercial vegetable grower.

Do not conclude from that that it is a book only for the man who grows vegetables for a living. After all, diseases and insects never boycott the home garden. On the contrary, they often seem to favor it, doubtless because the fight for existence there is less strenuous than on the commercial farm where control measures are necessarily followed more religiously.

The book is published by the McGraw Hill Publications, New York City. The price is \$5.00, and it can be ordered direct from the publisher or your local bookstore will be glad to order a copy for you.—H. L. C.

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

THIS LITTLE "MILKMAID"
LIVES IN THE CITY!

IN A real sense, Isabel Manning Hewson is a "milkmaid"—working for you. But instead of helping to produce milk, she's helping to *sell more* of it to *more people*. At the same time she is selling fruits and vegetables and other products from Northeastern farms. She talks to thousands of women food shoppers—on the air—three times a week, for Sheffield Farms.

TUNE IN Isabel Manning Hewson's "*Morning Market Basket*." Every Tuesday, Thursday, Saturday, 9:30 A. M., WEAF. She is telling the families of the great Metropolitan area more about the fine milk produced in the New York Milk Shed . . . suggesting many new and different ways to use it . . . helping to get more people to use more milk.

SHEFFIELD FARMS

By L. B. SKEFFINGTON

from SKEFF'S NOTEBOOK

POSSIBLY by the time this is in print a referendum will be called on a milk marketing order for the Rochester market. Concluding a day-long hearing on a tentative order, Commissioner Noyes announced the evidence would be studied and a revised order submitted to producers. If 75 per cent approve, it is expected the order may go into effect around Nov. 1.

Of the score of witnesses who appeared none disputed that dairymen needed higher returns. Opposition to the proposed order was based on obtaining exemptions for special groups.

The proposed order called for a Class 1 price of \$3.15 per 100 pounds. Frank Lant of Ovid, attorney for the Dairy-men's League and a member of the lawyers' committee of the Rochester Milk Producers' Bargaining Agency testified that as a result of further conferences the agency was willing to accept a fixed Class 1 price of \$3 until May 1. The tentative order would have called for a fluctuating price as the butter market moved up or down.

Producers stuck to their demand for \$1.90 for Class 2-A, fluid cream, although Smith O'Brien, attorney for the dealers, urged that it be made \$1.60. He urged this in order to keep the retail price of cream down and stimulate greater consumption.

Opposition to the equalization pool feature of the order was voiced by Miss Linda Puffer, Avon producer of certified milk; B. J. H. Rikert of Syracuse, representing the Guernsey producers, and by Earl D. Merrill of Webster, representing producer-distributors.

The producer-distributors asked the same exemption from equalization that is granted similar producers under the Buffalo order. However, it was pointed out that an amendment has been proposed to the Buffalo order, under the Nunan-Allen law which would eliminate these exemptions.

Harvey R. Way of Churchville, president of the bargaining agency, said that all except one of the cooperatives affiliated in the agency had approved the proposed order. This latter cooperative includes about 94 members. There are about 1,900 producers supplying the market. Independent producers have formed a co-op and are affiliated.

Way testified that dealers had declined to avail themselves of voluntary features of the law until after the producers had made application for an order. He said conditions had been especially bad in the market after suspension of the New York and Buffalo orders.

* * *

Information Wanted!

What do fruit growers want to know? This was the problem faced by program planners of the New York State Horticultural Society. At a recent meeting of the program committee, following letters to officers, committeemen and others, the answers to a letter from Secretary Roy P. McPherson dovetailed so much that the committee was able to summarize a great many of the topics under two general heads:

- 1—"How can we produce apples at lower cost?"
- 2—"How can we improve our returns from market?"

Accordingly, the theme for the winter meetings next January will be "the economics of production and marketing." A tentative program is being drafted and will be sent to a large cross-section of the society to "shoot at."

An Advertising Tax?

President J. R. Stevenson of the Horticultural Society has announced that he will advocate a tax of one cent a bushel on apples to provide an

advertising and promotion fund. At a recent meeting of Western New York fruit committee sentiment favored a tax, although there was some suggestion that it might be less than one cent. The same group by vote favored a law to bar all apples below combination grade from the fresh fruit market.

The question of barring culls from market has been agitated for years. There seems to be a widespread belief that dumping a lot of poor fruit on the market kills the chances of selling good fruit advantageously. A number of states do bar culls or low-grades. This year Michigan has an apple tax and a cull law.

Michigan, like Washington, shifted from a voluntary to a compulsory advertising assessment after a trial of the former method. The same is true of the Maine potato-advertising campaign. I have listened to many growers talk on both sides of the question. On one hand, President Stevenson says the Apple Institute has demonstrated the effectiveness of advertising and merchandising apples, so that this work ought to be carried forward on a much larger scale under a state-wide tax plan. W. R. Tousey, institute director, says all growers obtain the benefit of institute work and many of them do not contribute. It is this burden of carrying "free riders", he says, which has developed agitation for a tax.

My slant is this: The promotion work carried on by the institute has been very effective, but perhaps hard to trace in direct returns to growers. The institute cannot raise general price levels, but it has succeeded in moving a great deal of fruit that otherwise would not have moved. Because of the activities behind competing products the Northeastern apple was being driven out of its markets until the institute began to change this situation. I am convinced the work must be continued unless growers wish to quit the fresh fruit market. How it should be paid for is up to the growers.

* * *

Government Will Buy Apples

"Don't make any mention of surplus apples, because the market is bad enough without advertising it," a grower friend wrote me. I agree.

Actually, there has not yet been enough movement of apples to establish a market. Three things have been responsible for this:

- 1—The heavy movement of peaches which attracted attention in fresh fruit circles, pushing apples into the background.

- 2—A glut of early apples. Apples came on very rapidly, possibly due to dry weather, with some of them small.

- 3—The shutting off of export markets by war.

One of the best sales I know of is a chain store deal. It has bought in supplies at \$1.50 per 100 pounds for McIntosh and Spy and \$1 for Greening and Wealthy, furnishing containers.

The government has decided to buy apples. The plan this year to buy at the market, rather than a fixed price. There are some reports that the trade is holding back, eyeing this deal. Processors' prices have been low this season. One big company paid 55 cents per 100 pounds for Number 1 canners and 35 cents for Number 2 canners. I have heard of other offers at lower figures and some canners report they have signed all their requirements. The dryhouse deal is an unknown factor. There is some belief that war conditions may develop a strong demand for dried apples. Likewise there is some fear that a large Canadian crop may seek outlets in the U. S. It is not believed, however, that Nova Scotia ap-

ples go so well in American fresh markets. However, growers and the trade are watching to see what Nova Scotia and Virginia does with the apples that normally it would hope to export.

Apples have also been put on the list of surplus products which can be purchased with food stamps. Food stamp plan, designed to furnish surplus crops to those on relief, is now in operation in several cities including Rochester.

* * *

Good Job on Peaches

From a rather gloomy outlook early in the season, marketing of Western New York peaches moved along fairly well. Early in the season when it looked like a big crop and possibly glutted markets, the Farm Bureaus in the fruit counties called meetings to set up a state peach committee. Frank Beneway of Ontario was named chairman and Mort Adams of Sodus secretary. Contacts were made immediately with chain and independent store groups and plans initiated for a great promotional campaign about the time peaches would be moving.

In spite of hot weather and the Jewish holidays which threatened to upset plans, the deal moved fairly well. This is not to say that all growers got as high prices as they wanted, but it does mean that retail outlets kept up a steady demand for great volumes of peaches.

This plan has worked so well that it has given impetus for setting up permanent committees representing different products around the important markets. An apple committee headed by W. R. Tousey of Waterport has been doing good work, especially in the direction of inducing the government to buy some surplus apples. Leo A. Muckle of the Cornell extension staff, who has worked with these committees, has pointed out that a better job can be done where the committees are organized permanently and plans made well in advance to meet whatever situation may arise.

Potato Estimate Lower

Reports from Maine continue to emphasize poor growing conditions the latter part of the summer. The September 1 government estimate knocked about 1,700,000 bushels off the August 1 estimate, but private guessers believe that the October 1 estimate when released will show another big drop.

Private estimates vary. Pessimists guess that Maine will ship no more cars of potatoes than they did last year, while others with a more rosy point of view believe that carlot shipments may be 2,000 cars ahead of 1938. Averaging guesses, it may be that the Maine crop when finally harvested will be as much as 5,000,000 to 6,000,000 bushels below the September 1 estimate of 47,600,000 bushels.

Turkey Crop is Big

It is generally admitted that turkey buyers always want growers to believe that there is a big crop of turkeys and that the price is bound to be low. But even with the proper amount of discounting, there is no doubt but that this year's turkey crop is big. The government report for September 1 indicated 22 per cent more turkeys than last year, putting crop at 31,957,000 and exceeding the previous record crop of 1936 by 15 per cent.

Northeastern States are showing a substantial increase in number of turkeys kept. It appears that producers are marketing more than the normal amount of turkeys early. Cold storage holdings of turkeys on September 1 were 10,808,000 pounds, which is about double last year's figures. Increase in holdings over last year is equivalent to about 300,000 birds, or about 1 per cent of this year's crop.

Onion Crop the Heaviest

This year's U. S. onion crop is the heaviest ever grown in the country. It is also one of the best from the standpoint of keeping quality. Past records show that onion consumption does not vary greatly from year to year unless there is an extreme scarcity. Consumers buy in small quantities and a cent or two a pound makes

little difference in demand. Consequently, when next summer rolls around, we may find onions still in storage and no demand for them.

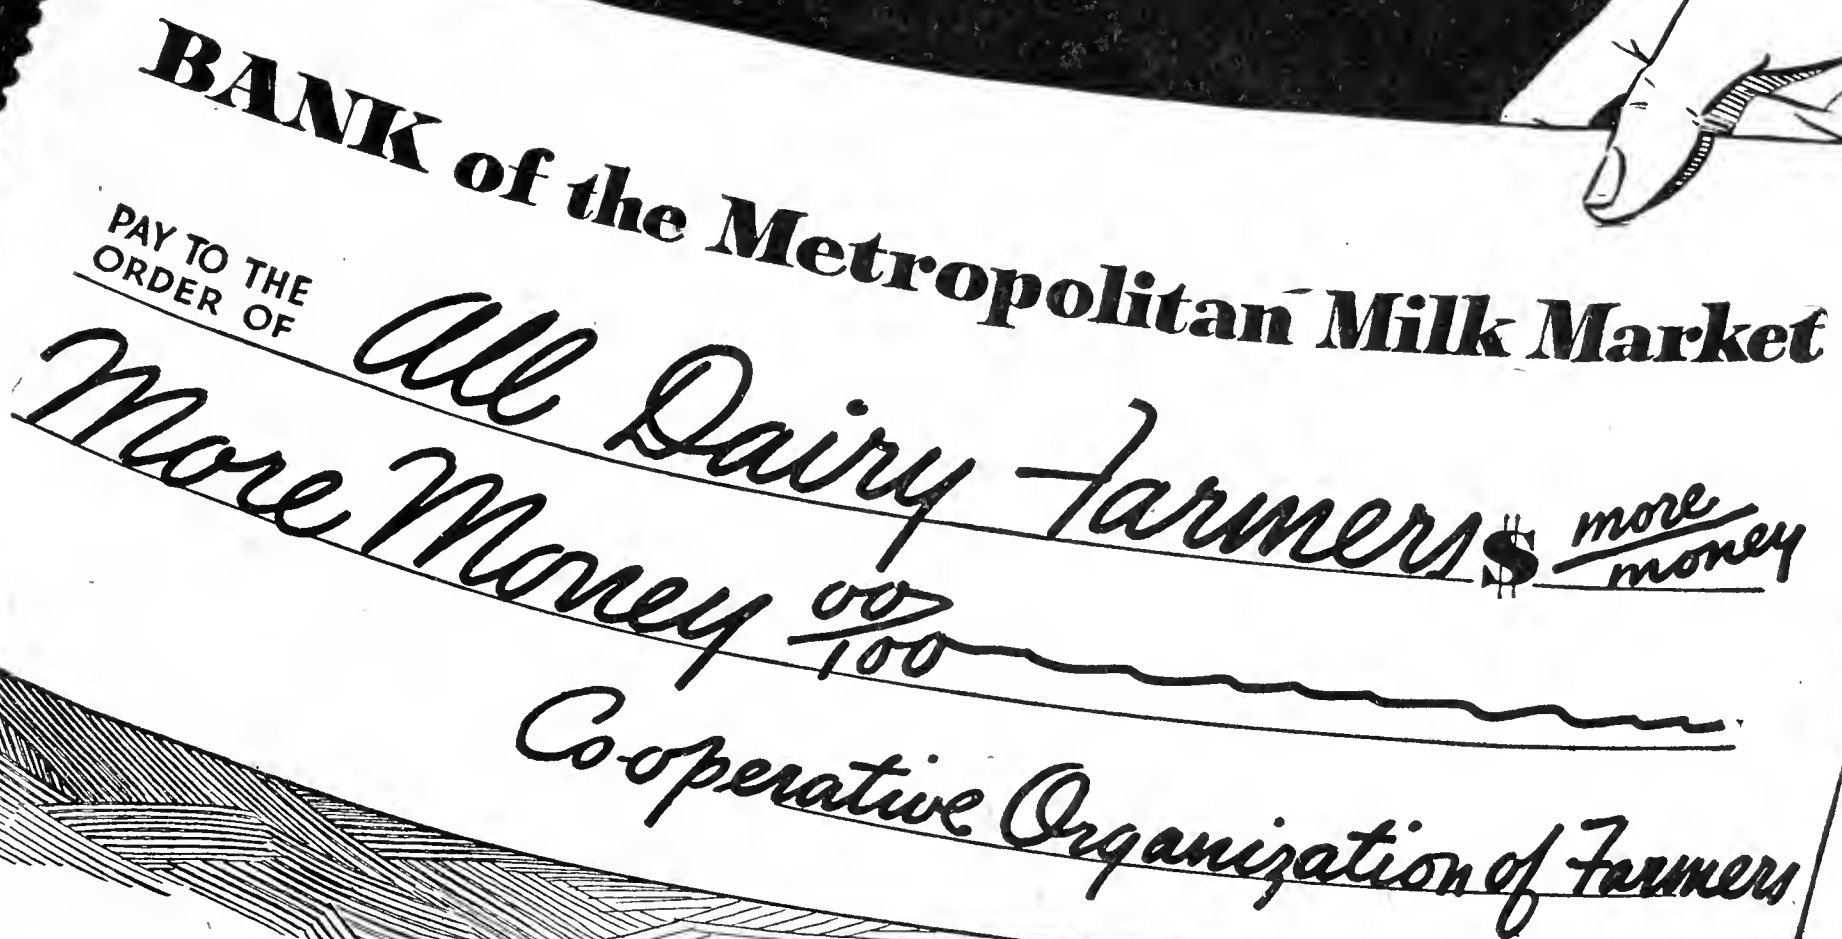

The State of Michigan has taken steps to limit the marketing of undesirable onions by restricting the sale of those which do not grade U. S. No. 1 Northern Grown Onions. A tolerance of 10 per cent allowed. Up to date no other onion growing states have followed this lead.

Bad Business

Those who would put New York State into the gambling business by the Pari-Mutuel Amendment to the Constitution, to be voted upon this November, argue that this amendment would increase the income to the State and reduce taxes. That argument is unsound. First, the 3 per cent tax which the State would put on the betting is so small that the income would not amount to much. Gamblers, not the State, would get most of the money. Second, making the State a partner in the gambling business is wrong, and therefore no amount of money raised can justify it.

There is grave danger that this race track amendment will be passed, because folks who oppose it may not turn out to the election this fall because there are no other big issues at stake. On the other hand, those interested in gambling are making every effort to get those in favor of this amendment out to vote. This betting scheme will disgrace the State if approved. It should have attention on Grange and other farm programs, and everyone be urged to go to the polls purposely to defeat it.

Your Check for October Milk will be **LARGER**

BANK of the Metropolitan Milk Market
PAY TO THE ORDER OF *All Dairy Farmers* \$ *more money*
More Money 97/100
Co-operative Organization of Farmers

97%

of the farmers of the Metropolitan Milk Shed said: "We want a larger milk check for October and the months to come." And because of that united demand, YOUR October milk check will be LARGER.

Remember, it will be larger because you ASKED FOR IT LEGALLY ...

- ... NOT because of strikes and violence!
- ... NOT because of property destroyed!
- ... NOT because the peace and happiness of you and your neighbors were threatened!
- ... NOT because communities, families and churches were split and made bitter enemies!
- ... AND NOT because of the C.I.O.

You will get these LARGER MILK CHECKS only because farm organizations have been fighting for three years for the right to demand LEGALLY *a living price for Milk!*

For years, the co-operative farm organizations have been fighting to protect the rights and further the interests of ALL farmers, and today we are ALL receiving the benefits of that fight.

We farmers of the Dairymen's League are proud of the fact that our fellow farmers have seen that we ALL can win by legal methods. We are proud of the understanding which has come to thousands of farmers outside our organization ... an understanding of the value of organization and of co-operative effort.

Let us hold fast to our legal rights and we will never have to spill our neighbor's milk, tear down his fences, or allow outsiders to poison his cows or threaten his family.

For at last we are winning the right to put OUR OWN price on OUR OWN milk.

THE THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

NORTHEASTERN Slants ON THE National NEWS

Congress Debates "Cash-Carry" Bill

GOING ON in Washington as we go to press is history-making debate to decide best means of keeping this country out of war. Bitter lessons learned in World War went into writing of revised Neutrality Act, now before Senate, which may be divided into two parts:

First: Removal of present embargo on export of arms to warring nations. As law now stands, this country can sell to belligerents all goods, including what goes to make "implements of war", but not the actual fighting weapons. (In other words, it can sell the needles, thread, and cloth, but not the finished coat.)

Second: Establishment of a cash-and-carry system for sales to warring nations, which would keep American ships and citizens out of war zones. If passed, this would confine U. S. shipping largely to Latin-American trade.

Not only in Washington, but from coast-to-coast, are speakers being heard for and against this legislation. Here are some of opposing views being heard:

Seventy-four year old Senator Borah of Idaho, leader of those against repeal of embargo, warned Senate that lifting of it would eventually get this country into the war. He argued that American munitions plants would become targets for sabotage by belligerents who couldn't take advantage of cash-and-carry system.

Senator Key Pittman, chairman of Senate Foreign Relations committee which wrote the bill, has branded present arms embargo as unfair. To continue it, he told Senate, would be to discriminate in favor of Germany, "because it prevents Great Britain, which is surrounded by water, from buying in our market the implements of war, while Germany, being a land power, can buy from Russia, Italy, and Central European countries." He described proposed amendments to neutrality law as "best guarantee against this country's being dragged into war, because they would keep American ships and citizens off the high sea in zones where they are in danger of being destroyed."

Former New York State Governor, Alfred E. Smith, speaking over nationwide radio hook-up, appealed to American people to support the new bill, because it is "so clearly right." Calling cash-and-carry system "just common sense", he said that it was undoubtedly the lack of such a law in 1917 that brought us into the World War.

Also being heard from is plain John Q. Public. This is one bill on which every American citizen has a strong opinion, and Senate and House post-offices are being flooded with letters for and against it. One day alone saw arrival of 300,000.

SLANT: Whether or not Congress lifts arms embargo, it should certainly enact cash-and-carry clause of the bill without delay. This is by far the most important point in keeping this country out of trouble. As Europe's war grows more and more destructive, ships and crews of neutral nations will find their way to bottom of ocean along with those of warring nations. Therefore, let us firmly resolve to safeguard American peace by keeping our ships at home.

March of War

"RUSSIA has been doing very well," as one news commentator puts it in describing the way that Soviet Republic is taking advantage of European situation. Besides getting large slice of Poland through her deal with Germany, Russia is forcing small Baltic nations into her camp. Estonia, tiny nation about size of Vermont plus New Hampshire, has had to give Russia right to build air and naval bases on her islands, making Estonia practically a Russian dependence. Soon to meet same fate is Latvia, another small Baltic state. Also in line to feel Russia's heavy hand are Lithuania, Finland, Turkey and Balkan States.

Germany, meantime, has finished off Poland and as result gotten all of it that is west of the Rivers Pissa, Bug and San—the rest going to Russia. Joint Russian-German statement, announcing partition of Poland, declared that defeat of Poland should automatically end Europe's war, there now being nothing to fight about in their opinion. Both powers said that they would work for peace, but threatened that they would take joint military action if France and Britain refused their terms.

Later, in speech to German Reichstag, on October 6, Hitler made clear kind of peace he would make with France and Britain. He suggested general disarmament, to be followed by a conference of the powers to settle group problems. As usual, he promised that he had no further territorial claims in Europe. As we go to press, French and British governments have not yet made their reply to Hitler. However, they are expected to repeat their stand that they cannot discuss peace with present German government, in view of the past record of broken promises.

"Keep-Out" Sign

Delegates of the twenty-one American republics, meeting at Panama this month, approved establishment of a broad safety zone in American waters for inter-American shipping; also, a general declaration of neutrality in European war. Safety zone will begin at Canadian-United States border in the Atlantic, take in the Caribbeans and Panama Canal approaches in both Atlantic and Pacific, cover commercial shipping lanes of entire South American continent, and West coast of United States up to Canadian border. Zone excludes only the territorial waters of foreign possessions in the Americas. Coastal patrols will be established where necessary.

Won't Freeze Farm Prices

LAST WEEK as special session of Congress got under way, subject of prices received by farmers popped up in House of Representatives. Representative Jones of Texas, chairman of Committee on Agriculture, and Representative Cannon of Missouri, chairman of appropriations sub-committee handling funds for U.S.D.A., made it plain that they would oppose any freezing of farm prices until parity has been attained.

Except for corn-hog producers, and possibly wheat producers, American farmers are not expected to profit

greatly by war abroad. Some, in fact, will suffer lower prices for their products because of closing of foreign markets. This is already true of some classes of tobacco growers and apple producers.

Since war started, prices have gone up, but are very far from being "run-away". Only ones recorded at or above parity (1914 levels) are beef cattle and wool. During last war, general level of farm prices sunk during early months, and it took some commodities two years to climb back to pre-war levels. After this country entered war in 1917, farm prices in general skyrocketed, and there were shortages of some commodities. Different, today, is agricultural picture from either 1914 or 1918. There is a much larger supply of oils and fats, of wheat, corn, and cotton now than then, both here and abroad.

Farm-Price Index Rises

FEDERAL Department of Agriculture reports that general index of farm prices went up 10 points from middle of August to middle of September, reaching highest level since January 1938. Rise meant reversal of downward trend that had continued for 2½ years.

Taking part in upward climb were grains, up 19 points; meat animals, 16; chicken and egg prices, 12; dairy products, 7; cotton and cotton seed, 5, and fruits, except apples, 3 points. Apples and tobacco were the only major commodities for which prices fell.

Further prop for prices of dairy products in New York Milk Shed was referendum resulting in order by Secretary Wallace to increase Class 1 price from \$2.60 a hundredweight to \$2.82 for fluid milk, for seven months beginning Oct. 1. This boost in milk prices, it is estimated, will mean \$10,000,000 more income for dairymen affected by it.

Brief Farm Notes

MAKES APPLES BLUSH

A new chemical spray, discovered by two chemists at West Virginia Agricultural Experiment Station, is said to have power to heighten color of naturally red apples, and even to put a slight blush on yellow apples, like Grimes Golden, that ordinarily have little or no red coloring.

The glow will be a natural one — not a mere paint job. The new spray stimulates formation of a pigment called Idaein, to which natural red color of apples is due. Large-scale orchard tests of this spray have now been made for four years.

DROUGHT IN WEST

Northeast is not the only section of United States to be hit by drought this year. Severe drought conditions have developed in Western wheat belt, and dry seeding conditions are reported all over southern half of it, from the Allegheny to the Rocky Mountains. In some sections, ground was so hard latter part of last month that plowing had ceased.

TURKEYS EAT 'HOPPERS

Grasshoppers, and not Thanksgiving, were what the Wiseman family of Channing, Texas, had in mind when they bought 1,200 young turkeys last spring. With their farm almost covered by the insects, the Wisemans decided they would bring in a flock of poults to clean them up. The young birds went to work and almost over night made the farm hopper-less. Since then the Wisemans have had to

provide standard rations for the turkeys, as there has been no return engagement of the grasshoppers. However, the Wisemans say they don't mind having to supply the birds with regular feed, as they will have a crop of 300 ready for Thanksgiving, and the rest of them will be plump enough by Christmas.

NEW GRAPE VARIETIES

Promising new varieties of grapes have been developed by scientists at New York State Agricultural Experiment Station, at Geneva, N. Y. Quality and flavor of European types have been bred into United States variety, known for its hardiness, vigor and resistance to disease. Twenty-five thousand seedlings are said to have been used in the experiment, of which only 900 came through the rigid requirements necessary for a second test.

NATIONAL FIRE PREVENTION WEEK

This is National Fire Prevention Week, and farmers everywhere are urged to check up on any fire hazards they may have around their farms. Secretary of Agriculture Wallace reported at beginning of this week that fires on farms last year took about 3,500 lives and caused property damage estimated at \$95,000,000, or about one-third of fire loss for entire nation. These losses, he said, were largely preventable, and were caused chiefly by defective chimneys and heating apparatus, combustible roofs, lightning, matches and smoking, gasoline and kerosene, and misuse of electricity.

Federal Department of Agriculture and State agricultural extension services provide free publications giving advice on fire protection and prevention. Write for them.

Getting the Lowdown On Labor Board

MORE than 60,000 questionnaires were recently sent to employers and to union organizations throughout nation by Chairman Howard W. Smith of special committee appointed by House of Representatives to investigate National Labor Relations Board. Public hearings are to be held later, but in meantime these questionnaires are expected to furnish committee with plenty of gunpowder. Every employer in the country who has dealt with Labor Board in one way or another will, it is said, be asked to file with the committee a fairly complete story of the dealing and his reaction.

Good Books to Read

THE BLIND SIDE, Patricia Wentworth. Readers of Patricia Wentworth's excellent mysteries will rejoice in this latest effort from her pen. The characterizations are particularly good—lovable, old-fashioned Miss Lucy among the smart, sophisticated younger members of the Craddock family, Lee Fenton waking up to find her foot covered with blood and a footprint leading to an apartment where her cousin was murdered during the night. The sense of foreboding and impending disaster is well built up, and the reader will probably not reach an answer until the last pages of the novel.—J. B. Lippincott Company, Philadelphia, Pa. \$2.00.

Good Movies to See

THE WOMEN. Highly entertaining picture, with not a man in the play. Rosalind Russell, Joan Crawford, and Norma Shearer are among the 135 representatives of their sex who take part. Train of events started by beauty-parlor gossip leads to Reno. The whole story is a satire on useless metropolitan women.

Practical Steps

THAT POULTRYMEN CAN TAKE
TO KEEP PRODUCTION COSTS IN
LINE WITH EGG PRICES

Floyd Neal of North Pitcher, N.Y. inspecting his flock of a thousand cross-breeds which will soon be housed for the laying season. Mr. Neal has always used G.L.F. Laying Mash and reports that his egg production is very satisfactory.

A YEAR AGO this page carried an article entitled "Eggs UP, Feed DOWN." Today the reverse is true. Last October $5\frac{3}{4}$ dozen eggs would buy 100 pounds of feed. Now it takes more than $8\frac{1}{2}$ dozen.

This is not the first time that poultrymen have been squeezed between high costs and low prices. It won't be the last. There is no simple solution. But there are several things the individual poultryman can do to get higher production per bird and lower cost.

1. Cull Closely

Right now all pullets going into laying houses should be looked over carefully, and only large, strong, vigorous looking individuals housed. The old birds should be culled down very closely and only the very best layers kept over for another year.

Ask your County Agricultural Agent about culling, or write for Cornell Extension Bulletin No. 175—a good, practical handbook on how to cull.

2. Save on Mash

The sharp rise in feed prices at the beginning of the war was made worse by the scarcity and consequent high price of dried milk products. (See G.L.F. PAGE, *American Agriculturist*, September 30.) Mashers have now declined considerably in cost, and the milkless feeds have declined more than the mashers containing milk.

Milk is a good poultry food. It is used in several of the G.L.F. mashers to supply minerals, high quality protein, and particularly as a rich source of the vitamins essential to growth and hatchability. It is not necessary for egg production. This has been clearly proved by experiments at Cornell, New Jersey, Pennsylvania, and other state colleges.

The poultryman who is producing eggs for market need not feed a mash containing milk. He will get excellent results by feeding G.L.F. Laying Mash. This feed is especially designed for commercial egg production. It provides everything that Super Laying & Breeding Mash does except the hatchability factor—at a saving of \$7.00 a ton.

Make Change Gradually

With reasonable care, layers can be shifted from one mash to another without suffering a drop in production. Put a few handfuls of the new mash in each hopper the first day while the hoppers are still fairly full of the old mash. As mash has to be added daily, increase the proportion of the new mash and decrease the amount of the old mash in each addition, until after a week's time only the new mash is being fed.

3. Use Home-Grown Grains

If you have good corn, oats and wheat or can buy them at reasonable prices from your neighbor,

you can use them to make a good mash in this way:

650 lbs. G.L.F. Laying Mash Supplement
200 lbs. Heavy Oats
700 lbs. Yellow Corn
450 lbs. Wheat

The oats, corn, and wheat should be ground and mixed with the Supplement. This will make a ton of mash about equal to Super Laying & Breeding with just a little less milk. Figuring a good price for your grains, you can still save about \$6.00 to \$7.00 a ton.

Then there is always the chance of using home-grown grain for scratch. As high as 10% buckwheat can even be used in place of oats in the scratch feed if the birds will eat it readily. Barley also can be used to replace half the oats in the same way.

4. Take Care of Your Bags

The big jump in burlap prices caused by the war is another factor that tends to increase costs. But

this very increase can be used right now to make a saving—because used bags, as well as new bags, are worth more money. Good, G.L.F.-branded, 10-oz. burlap bags in perfect condition are now worth 8 cents f.o.b. Buffalo, Albany, or Worcester. Service Agencies, because they have to sort and ship the bags, cannot pay quite as much.

Take care of your bags. If your Service Agency cannot give you a good price for them, ask for tags and ship them direct to Carl Burwick & Co., authorized receivers for G.L.F. bags.

5. Get Top Prices

Getting top prices for eggs is not difficult if you produce premium eggs and market them through a good agency.

To produce premium eggs, just remember these facts: (1) Eggs must be gathered at least 3 times a day. (2) They should be cooled quickly. Some moisture in the egg room is needed. (3) Grade them well and pack in clean cases.

G.L.F. Egg Marketing Services will help you get premium prices for such eggs.

C. J. Fairchild of New Berlin, N. Y., is now housing 3,000 layers. As in every other year for the past ten years, the pullets are being switched from Starting & Growing Mash to G.L.F. Laying Mash. Last year's production averaged around 60% for all birds. There were times when some houses were giving as high as 75% production. No breeders are kept in this flock.

The Boom Goes Boom!

By J. C. HUTTAR

AS I SIT DOWN to write this the first month of what we often hear mentioned as the "Second World War" has just passed. I know there is a great deal of confusion in the minds of most henkeepers as to what it will do to them if it continues. And, why wouldn't there be?

J. C. Huttar

The month has seen a war boom start which swept everything before it. War commodities such as metals, grains and oil were the first and most radically affected. Stocks and bonds followed immediately and business in general responded to the rush of retail orders as distributors always want to accumulate stocks at a time of rising prices. Eggs were caught in the wind and up they went, even though they are certainly not a direct war commodity.

Let's just look for a moment how things stood on September 1, the day before Mr. Hitler's troops walked across the Polish frontier.

Nothing Exciting

Prices had been holding below last year's by quite a margin. Production seemed to be running about 10% ahead of August 1938. Storage holdings on September 1, 1939 were about 11% higher than the same date last year. More layers were reported on farms and no great selling off of birds had begun. Consumption was just a little better than last year.

Certainly this is not a situation to get very jubilant about.

Now I'd like to give you some quotations and comments from the Producers' Price Current, published for 80 years by the Uner-Barry Publishing Company. This is a paper that reports the egg market just as they find it. I also have found their reporter's judgment to be about the best, year in and year out.

A moving picture such as these reports present gives us a good birds-eye view of the past month.

Upsy-Daisy!

From September 5 to September 12 egg prices climbed. The Producers' Price Current reported from time to time that trade was excellent in the finer grades, that the market was firm, and that consumption was encouraging even at rising price levels. Credit for increased prices was given to the war, and by September 11 the boom was on full strength. Buying was brisk at all quarters, chain stores reported lively demand, while receipts were beginning to fall off. In other words, it was a sellers' market.

On September 11 a note of caution was interjected in egg market reports with this statement: "In the final analysis the price structure is largely a matter of exercising some judgment in not permitting the advances to get out of hand and skyrocketing to dangerous heights. In fact, the present market is a bit treacherous, yet there is little or no present anticipation of any break in prices."

On September 13 prices were unchanged, but the trade was beginning to get uneasy, and the September 18

report quoted White Specials down 2 cents. Commenting on the situation, the Price Current said: "Receivers this morning find themselves with supplies on hand and a restricted call for goods. High retail prices have curtailed consumption and distributors are becoming a bit anxious. Indeed, it is no longer a sellers' market—rather the contrary."

The September 19 report showed another decline of 2 cents in White Specials, followed on September 21 by another drop of 2 cents. On the later date the Price Current said: "The entire egg situation is in a confused and very uncertain position. Retail prices are coming down. The International situation is bad and is further undermining confidence."

On September 28 we saw the first ray of light. Price of White Specials had been running steady for several days. Demand was better, and on September 29 quotations on that grade went up 1 cent and the comment was made: "Today's one cent rise was a conservative move in face of the premiums lately realized."

On October 2 there was a further increase of 2 cents, and I note this significant comment: "Receivers are anxious to avoid repetition of the situation a few weeks ago when prices shot up too rapidly and later fell even more rapidly."

It Seems to Me

It seems to me that I can draw a few conclusions from the above story. I'll list the things that I'm thinking about in 1, 2, 3 order. I wonder how they check with your thoughts.

Here are mine:

1. Since eggs came down faster and more than grains, oil or metal, they are not much of a war commodity.
2. Eggs will be affected in price only as the supply and demand situation warrants it.
3. The egg-feed-price ratio will probably be unfavorable to the egg producer for the coming year.
4. A speculative price ratio without a firm foundation doesn't help the poultryman any.

To meet these situations I will repeat the ideas that I expressed several weeks ago. It's going to take all the cutting of corners on costs plus very good producing birds to make poultry pay. Be sure to keep this in mind when you hatch or buy your chicks for the coming season.

"Squeezing may hurt a little—but it's going to hurt a lot more if we don't."

keep

your layers on the job—shorten their moulting period by giving them plenty of good feed—rich in Vitamins A & D. This will help

layers

stage their come-back from the moult quicker and better—get back on the job full of pep. "Nopco X"—Standardized Cod Liver Oil is an economical source of both vitamins. Included in your mash it will help keep your layers

working

and laying more eggs the year round. Fed regularly at recommended levels, the guaranteed potency of "Nopco X" (1500 U.S.P. units of Vitamin A and 200 A.O.A.C. units of Vitamin D per gram) is flock protection against possible Vitamin A & D deficiency. For dependable low-cost protection

feed "Nopco X"

to your layers in mill-mixed mash—or buy "Nopco X" from your dealer for home use.

Elmer Stone, at left, and his son Willard grading and packing eggs at the White Egg Farm, Clyde, Wayne County, N. Y.

With Emphasis on QUALITY

*Good Eggs Handled Right
Get the Buyer's "O.K."*

By H. L. COSLINE.

ONE DAY recently Johnny Huttar told me that for consistent high quality of eggs shipped, you have to go a long way to find a better record than that made by Elmer Stone & Son of Clyde, Wayne County, New York. Johnny's statement was backed up by Mr. Stone's winnings at the State Fair, when in the Egg Show he took first place on a dozen whites, first on three dozen mediums in cartons, first on a crate of eggs (in this class a package was also considered in judging), and second on three dozen large eggs in cartons.

That interested me, and so I made it a point a few days ago to drop in at

bag. The floor of the room is kept covered with water. We pack eggs in the crates the same day they are brought in, dividing them into four grades as follows:

Large	24	to 27	oz. (60 lbs. to the crate)
Medium	20½	to 24	oz. (54 lbs. to the crate)
Pullets	18	to 20½	oz. (49 lbs. to the crate)
Peewees	16	to 18	oz. (44 lbs. to the crate)

Then the eggs are put back in the egg room until shipped. We ship twice a week.

"That is not the entire story because we believe that there is a distinct relation between breeding and egg quality. We put no eggs in the incubator that do not have good shell texture, and in our pedigree breeding every egg that is put into the incubator is also candled. In fact, breeding for high egg quality goes one step further and that step is important. If a family of sisters produce eggs of poor shell quality, they are eliminated from the breeding program, regardless of the fact that they may be good producers.

"An attempt is made to keep eggs clean so that a minimum of washing will be necessary. We use shredded sugar cane in the nests, and find it one of the best materials we have ever tried. As a result we find it necessary to wash very few eggs. When we do wash them, we do not wipe them but put them on an incubator tray and allow them to dry."

"Your program sounds simple," I remarked. "If it is that simple, it seems that every poultryman would ship eggs just as good as yours."

"I think the two things most commonly neglected," was the reply, "are frequent gathering and keeping the eggs in a moist atmosphere. I believe that moisture is fully as important as low temperature.

Eggs from the Stone farm are shipped under the Wayne County label. The Farm Bureau Poultry Committee has adopted the label as a method of identifying high quality Wayne County eggs. The Committee has full authority over the label. When a poultryman decides he wants to use it, he makes a number of trial shipments, and if the eggs are satisfactory to the buyer, he is given permission to use the label. Later if the buyer complains of the quality of the eggs from that shipper, the Committee tries to see what is wrong and correct it; but if complaints continue, the use of the label can be denied to that shipper.

Elmer Stone has been in the hen business for 21 years. In 1935 his son Willard went into partnership with him, and they are now carrying on together.

All eggs shipped from the Stone farm carry the Wayne County label.

the Stone farm, a good sized poultry business with about 3,000 layers, to see how it is done. In Willard Stone's own words, here is the story:

"We gather eggs four times a day —about 9:00, 11:00, 1:30 and 5:00. We bring them in immediately and put them in a triple insulated egg room. The eggs are put in front of an electric fan until they are packed, and between the fan and the eggs we hang a wet

JAMES E. RICE & SONS
Box A, Trumansburg, N. Y.

"And the cow jumped over the moon."

GOOD while she's going up, but when she comes down, the thud is terrible! Yet, twice in less than a year, good, fresh cows have jumped toward the moon, and both times they have fallen back. Now they are on the way up again. This jump she may land, at least she has more chance of doing so than for a long time. Men are really going back to work in the cities and whether we have "embargo repeal" or not, our general price level is due for a rise; but as for the price of any farm product "jumping over the moon", no; not this year anyway. Marketing cows and feeding, then, again assumes an important position, and with some encouraging factors for stockmen.

Cows are generally graded and sold on the markets in four classes — fat cows (now selling \$6.50 to \$7.00); cutter cows (now selling from \$5.25 to \$5.75); canner cows (now selling from \$4.50 to \$5.25); and shells (now selling \$3.50 to \$4.25). Immediately, the marketing problem becomes one of whether to sell now or whether to feed a while, so as to place your cow in a higher classification.

Old, thin cows should be marketed now, for under present prices you cannot afford to carry them along. Old, fat cows should also be marketed. Young, thin cows should positively not be marketed under present conditions. Thirty or forty pounds a day of corn silage, with approximately 2 pounds a day of a protein supplement, such as cottonseed or soybean meal, will fatten them in 70 to 100 days. If the silage does not carry a good deal of corn, three or four pounds of corn added to this ration per day will bring the same results. Under present prices, you can well afford to feed a cutter cow, if she is young, approximately the same ration for 30 or 40 days and put her into the good cow class. Fat cows will undoubtedly work higher, but unless you have silage it is very doubtful whether it will pay you to carry them along. There is very little danger in making a Holstein cow too fat, although you can get a Jersey or a Guernsey "gobby" fat, and they are not wanted. A fat cow should just have a smooth covering of fat, or about the flesh of a medium steer. Do not endeavor to get them as fat as a fat steer, that will have one-half or three-quarters of an inch of fat completely covering him.

Heifers are good property. This fall, thin, yearling, open Holstein heifers, brought in and fed like steers, and marketed for meat any time after the first of the year, will prospectively be money-makers. This is not true every year, but with feeding cattle of all classes from the West selling at very high prices, there is almost sure to be an unusually good demand for lower-costing meats this winter and spring. In face of a short hay situation in some localities in the Northeast, it would probably be a mistake not to carry over good, two-year-old heifers wherever possible.

What a pleasure it is again to be at least a little optimistic!

Allegany-Steuben Holstein Sale

The Allegany-Steuben Holstein Breeders' Club is again making preparations for the annual fall consignment sale to be held in Hornell on October 19. This event has been carried on continuously by prominent breeders of that section for about a quarter of a century.

These counties are among the pioneers in organizing bull associations, and the influence of high class Holsteins is very noticeable. Many consignments are from such outstanding stock.

Busy farmers like the Triple Action OF Sterling SUGAR CURING SMOKE SALT

THERE is triple action in this improved meat curing salt. One—it preserves the meat you cure at home with the preserving power of highest quality meat curing salt. Two—it flavors, with a balanced blend of sugar, spices and distilled liquid smoke. Three—it assures appetizing color with the correct quantity of salt peter.

Make sure of all three. Ask for Sterling Sugar Curing Smoke Salt by name. For curing up to 20 lbs. of meat, use the 2 lb. 2 oz. can. For larger quantities buy the 10 lb. can which cures up to 100 lbs. of meat. You make sure of good results, and take no chances with the lasting quality and deliciousness of meats you cure at home, with the triple action Sterling Sugar Curing Smoke Salt, developed by the Research Department of International Salt Company, Inc.

VALUABLE PREMIUMS — 10 lb. cans of Sterling Sugar Curing Smoke Salt contain coupons. They entitle you to receive, at about half the usual retail cost, a heavy carbon steel butcher knife, and a handy, blued steel bell scraper for removing hog bristles.

STERLING SEASONING—Make delicious sausage—flavor gravies, meat loaf, roasts, and other meats—with this specially prepared seasoning. Buy it in the 3 oz., the 10 oz., or the money-saving 7 lb. 8 oz. can.

STERLING TABLE SALT—Enjoy the steam-sterilized salt in the 1 lb. 8 oz. square package with metal pouring spout firmly attached on the side. It is highest quality, free running, with the "old time" salty taste.

White Gold for the Farmer's Profit
Salt does more at less cost than anything else bought for profit on the farm. Write for a free copy of The Farmers' Salt Book—for helpful information about profit-making farm uses of salt.

FREE MEAT BOOK—Ask for The Farmers' Meat Book. It shows pictures of all butchering and curing operations for putting up pork on the farm. Easy instructions help you to get certain results with Sterling Sugar Curing Smoke Salt.

INTERNATIONAL SALT COMPANY, Inc.
DEPT. AA 1039 SCRANTON, PA.

Delicious Apple

RECIPES

by
MRS. GRACE WATKINS HUCKETT

WHILE the following facts may be of interest to his mother, I doubt if Johnny, when he looks around for something to eat after school, cares one whit whether the apple he selects really is good for *him* or just good to *eat*! Fortunately it is both.

Dietetically, apples are valuable because of their refreshing acids, substantial bulk and stimulating juice, besides the minerals, calcium, phosphorus, and iron, and vitamins A, B, C, and G. Furthermore, the "King of Fruits" can be put into the menu at any point from first to last, depending upon what the rest of the meal is, of course. It also may be eaten raw or cooked, and stores better than most fruits.

Not all varieties are equally good for all purposes. Votes have been taken from all over the country as to varieties preferred for pies, sauce, and to eat out of hand, for each section has its own favorites. Tests at the New York State College of

CASH CONTEST!

EVER SINCE we ran our cooking school last winter, we have been getting letters from readers asking us to do more along that line. So we have decided to do "something like it only different!"

First of all, you will note the little quiz, "Are you a Good Reader?", printed on this page. The idea is for you to read carefully the article, and then read the questions and see if you can answer them. No fair peeking after you have read the article and are trying to answer the questions! *Do not send the answers in to us.* The quiz is just for your own amusement and to test your reading ability.

Second — and this is where the cash contest comes in — we are offering prizes for the *six best letters answering these two questions:*

1. How often are you in the habit of serving apples to your family, and in what ways?
2. Which of the apple recipes given in this article do you like best? Mention one that you have tried, describing how it turned out and how it was liked by your family.

We will pay \$5.00 for the best letter, and \$1.00 for the next five best. Letters should be *brief*, and mailed to Apple Recipe Contest Editor, *American Agriculturist*, Box 367, Ithaca, N. Y., not later than October 28, 1939.

Watch for more of these quizzes and cash contests in connection with future articles on this page.

Home Economics line up apple varieties for baking and for sauce in this order of choice:

Superior for baking: Cortland, Jonathan, Wagener and Wealthy.

Good for baking: Baldwin, Golden Delicious, McIntosh, Northern Spy, Red Canada, Tompkins County King, Twenty Ounce and Winter Banana.

Superior for Sauce: Cortland, Gravenstein, Jonathan, Northern Spy, Winter Banana and Wealthy.

Good for Sauce: Baldwin, McIntosh, Red Canada, Tompkins County King, Twenty Ounce, Wagener.

Season is just as important as the kind of apple, since longer cooking is needed after an apple has been stored for some time. Too long cooking and overmuch sugar destroy the delicate apple flavor, which usually holds up well until about February. After that time, one can play up the spices, brown sugars, lemon juice and similar helps. Amount of sugar added depends upon the variety of apple, and how long it has been stored.

Some facts to remember about apples are: three

Apples are versatile! They may be prepared in so many different and delicious ways that they can take their place at the table as part of the meat course, the main luncheon or supper dish, salad, or dessert. Treat your family to some of the delightful apple dishes described in this article.

—PHOTO BY
HAROLD M. LAMBERT.

apples of average size weigh about one pound; apples covered while cooking have a better flavor than those cooked uncovered; a fairly high temperature for a short time yields a better product than a low temperature for a long time; about a teaspoon of sugar per apple is right for baked apples; twice as much sugar is needed if the same quantity of apples is made into sauce; use as little water as possible in cooking apples.

STEWED APPLES

10 medium sized apples	$\frac{3}{4}$ cup sugar
$1\frac{1}{2}$ cups water	Salt if desired

Wash, pare, core and slice apples that hold their shape. Bring the water and sugar to a boil in a large pan. Add the sliced apples. Stir, then cover. Cook the apples until they are tender but not soft, depending upon variety, time of year and thickness of slices. Uncover and stir every few minutes. Remove from heat and allow them to stand in the covered pan 5 to 10 minutes.

To make sauce, use apples that cook up easily, add very little water, cook covered until softened

in their own steam. Sweeten to taste while hot, and add a few grains of salt. It is thought that peeling and coring before cooking give a less bitter sauce than if skins and cores are (Turn to Page 21)

ARE YOU A GOOD READER?

FOR YOUR own fun and satisfaction, see how well you can answer the following questions **AFTER YOU HAVE READ** this article on apples. Study it, and then take pencil and paper and write out your answers **WITHOUT CONSULTING THE ARTICLE AGAIN.** Next, check your answers with the information in the article, and give yourself 10 points for each correct answer. Grade of 90 is excellent, 70 is fair, 60 or under is poor.

1. What important minerals do apples contain?
2. What are vitamins?

3. What are the two most important points in apple cookery?
4. How much sugar is needed per apple for: (a) baked apples? (b) apple sauce?
5. Should apples be covered while cooking?
6. What qualities are desirable in apple sauce?
7. What is the correct oven temperature for baking apples?
8. How can you make baked apples keep their shape?
9. What are three of the nine variations of baked apple given here?
10. Which one of the nine variations of baked apple would make a good main dish for lunch or supper?

AMERICAN AGRICULTURIST RECIPES ARE TESTED RECIPES

Pick STYLES that Flatter You

STYLES this fall have plenty of "oomph" if you pick the right one for yourself. Besides being good to look at, they are practical, for Miss America does not like having to be too careful of her everyday clothes.

Mixing colors and materials, especially if one of them happens to be a plaid, is just the thing. Ruffles appear here and there to give a touch of the mid-Victorian, another important accent this season.

DRESS PATTERN NO. 2930, besides giving an opportunity for playing up the popular plaid, has one of the fashionable new detachable hoods. Furthermore, the bishop's sleeves are stylish favorites. Sizes 11 to 19. Size 15 requires 2½ yards of 39-inch ma-

terial, 1½ yards 35-inch contrasting for dress without hood.

PINAFORE AND BLOUSE PATTERN NO. 2934 is sweet for little girls sized 2 to 8. Several different blouses lend variety to the cute little pinafore. Size 4 requires 1 yard of 35-inch material for pinafore; ¾ yard 35-inch material, ⅜ yard contrasting

Autumn Song

By EMILY ESTEY.

Oh, Spring awakes the gypsy
Lying dormant in my soul,
And romance lies around each bend,
On every sun-washed knoll.

But Autumn with her fruity scent,
Her sense of storms to be:
Yes, Autumn shocks my thriftiness
With prodigality.

And what she gives with lavish hand,
I hoard as miser might,
'Til I've her treasure stored in rows
Of jars in colors bright.

for blouse. Embroidery 713 must be ordered separately. Price 15c extra.

TO ORDER: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new fall and winter fashion catalog.

Today in Aunt Janet's Garden

Long Drought Made Plants Dormant

THE LONG dry spell last summer had peculiar effects on plants in our neighborhood. The rains which came at the very end of August apparently made the plants think that spring had arrived; some of the spirea, particularly, showed a few blooms, the violets became active again and some of the neighbors cut asparagus.

While it is interesting and pleasant to have some of our spring joys in the fall, I could not help being concerned as to whether the renewed activity would send these plants poorly prepared into winter. They really should be hardening off and becoming dormant before hard winter weather strikes them. Last year, fall rains kept the chrysanthemums so very active that the bitter winter weather at Thanksgiving wiped out more for me than I had ever lost in one season.

I feel helpless to cope with these great natural forces; I watered the borders enough to keep the plants alive during the dry weather, yet that did not offset the stimulation of the rains when they did arrive. Now I can refrain from pruning or fertilizing or doing other similar jobs which would make any plant more active and therefore more tender. The only exception I make to fall fertilizing is in the case of peonies; then each plant gets 1 cupful, spread in a circle several inches from the crown and scratched in. Bonemeal acts slowly and does not become available to the plant until spring.

I anticipate that mulching will be more important than ever this winter. After the ground is frozen a few inches deep, the mulch will help to keep it so; in that way the plants are encouraged to stay dormant until the mulch is removed.

Incidentally that amaryllis bulb needs to be repotted and put in a dark place until new growth starts. The bulb will be covered only as far as the neck.

I am getting a few narcissus bulbs in new varieties, but that belongs in a different story.

IT'S A LITTLE FISHY—THE GOVERNMENT STOCKED EVERYTHING HERE—ABOUTS #45

2,650 CHILDREN PROVE THAT VICKS PLAN CUT COLDS SICKNESS IN HALF

CHILDREN'S sickness from colds reduced 54%—school absences 77%! Sounds almost too good to be true, doesn't it? Yet that's what doctors' certified reports show Vicks Plan did in clinical tests on 2,650 children. Will it do as much for your family this winter? It's easy to find out—just follow a few rules of hygiene and use these two specialized medications whenever needed:

WHEN COLDS THREATEN...

Millions of families now use Vicks VA-TRO-NOL to help keep many colds from developing. It is expressly designed for the spot where most colds start—the nasal passages. So easy to use, too—you just put a few drops up each nostril at the first snuffle, sneeze or any other sign of nasal irritation. Right away you can feel the tingle as it stimulates Nature's own defenses to prevent development of colds. Also great for clearing your nose of stuffiness when you have a miserable head cold.

VICKS
VA-TRO-NOL

IF A COLD STRIKES...

All over America, 3 out of 5 mothers depend on this external poultice-and-vapor treatment to relieve the coughing, phlegm, irritation, muscular soreness and tightness of a developed cold. There's no needless dosing. You simply massage Vicks VAPORUB on throat, chest, and back at bedtime. It acts swiftly—2 ways at once: (1) like a warming, stimulating poultice, while (2) its medicinal vapors are breathed into the air passages. This direct action brings comfort and invites restful sleep.

VICKS
VAPORUB

Old Home Week at Waynor

III. "When the Savings-Bank Was Robbed" (PART II.)

Pinckney Danbridge was hired as a night watchman of the Waynor Savings Bank, which occupied as its quarters the rear of a local shoe store. Pinckney slept in a room over the store. A mechanical contrivance had been devised as an alarm to arouse him in case the bank property was entered by robbers. A robbery in another village had caused much concern in Waynor. One night Pinckney yielded to the temptation to visit a young lady in another part of the town and during his absence robbers entered the building. He returned just as they were making their getaway. Hasty examination proved the bank had been robbed. Without giving an alarm he saddled a neighbor's horse and followed the outlaws. He soon caught up with them but was met with two drawn pistols.

* * *

"Halt, you!" one of them called out, in a tone so savage that it made the young fellow quake.

"Where are you riding to?" the other demanded.

Pinckney was scared, but his wits stood him in good stead.

"There's a new baby at our house," said Pinckney. "They got me up and sent me in an awful hurry for Doctor Davis."

The two men looked at one another a moment. Then they laughed. "Go on, you yoho!" one of them said.

Pinckney put the horse to a gallop, and rode on ahead of them for as much as a mile; then coming to a cross-road he turned off on it, and leading his horse into some bushes, waited for the robbers to pass.

They came along in the course of a few minutes and drove by, keeping the main road.

Pinckney waited until they were well out of sight, for he knew that it would not do for him to let them catch sight of him again. Besides, it was getting lighter, and he could follow their track in the sandy road, all the better that there had been rain earlier in the night.

When they had been gone for fifteen or twenty minutes, he followed them on the main road again, till between six and seven in the morning. He met one team, but was still able to follow the track of the wagon ahead.

They were now in the Town of War-mouth, approaching the sea; and soon after this, as he cantered on, he came to a little collection of houses, stores and a tavern, known as Lombard's Corners. The wagon track turned in at the tavern.

As soon as Pinckney saw where the track ended, he turned back, and hitching his horse at a barn out of sight, went around in the rear of the tavern and entered the stable by a side door, behind the horse-stalls. A very sweaty horse, with the harness still on, stood in a stall, eating oats, and there was a muddy wagon in the stable which had evidently just come in.

Pinckney noted this at a glance, also a fresh-faced, red-headed boy, apparently twelve or thirteen years of age, who was shelling ears of corn and feeding a flock of hens and turkeys outside the door.

He said "Hallo!" to the boy, and coming through the stable, asked him if he had a dozen eggs of his own that he would sell.

With a glance at the tavern entrance, the boy came into the stable and softly closed the great door.

"I'll get you a dozen," said he, "if you'll promise not to tell."

"I won't say a word," replied Pinck-

ney. And while the lad was making a collection of eggs from several hiding places of his own, he asked him whose wagon and horse it was that just came in.

"Don't know," replied the boy. "My, but they've been drivin'! Heard 'em tell the old man that they was sheriffs, chasin' a hoss thief. Said they wanted to feed their hoss and get breakfast just as quick as they could."

"Where are they now?" asked Pinckney.

"Eatin'."

"They didn't know there was anybody in the stable here when they drove in," continued the boy, counting his eggs. "But I was here, milking the cow. I was sitting down low on the stool snug up to the cow, behind the

By C. A. STEPHENS

stanchel boards. They looked around, and one of them said something kind of queer."

"What did he say?" Pinckney asked.

"Said, 'We'd better not carry it into the house. The folks might notice it and think it strange. Better put it out of sight here somewhere till we start.'"

"Did you see what it was they had?" Pinckney inquired, with growing interest.

"Yes, I peeked through the stanchel boards. It was some kind of a leather bag," said the boy. "And I'll bet it's got pistols in it. Sheriffs always has pistols, you know."

"Did you see where they put it?" Pinckney asked, quickly.

"They put it in the old winnowing-mill, there by the mow," said the boy. "One of them hoisted up the fan end and set it under the fliers. But you'd better not touch it," the boy added. "It's got pistols in it."

Pinckney thought rapidly. "You must get me something to put these eggs in," he said to the boy. "I can-

not carry them in my hands. Get me a basket, or a small box or a bag."

The boy disappeared through a passage into the ell, extending from the stable to the tavern, and the instant he was gone, Pinckney looked under the "fliers" of the red fanning-mill. Hidden away there was an old leather valise, tied up with a bit of rope. It was quite heavy, and when Pinckney shook it, gave forth an unmistakable chink of silver money. Without waiting to conclude the transaction in eggs, Pinckney snatched up the valise, ran out at the side door of the stable and back to his horse.

Meanwhile the robbery of the bank and the mysterious absence of Pinckney Danbridge had been discovered at Waynor promptly at six o'clock that morning. The village was thunder-struck, and knew not what to think. Barron was amazed; Chapman was furious. He examined Pinckney's bedroom with suspicion, which soon grew to a conviction that the boy was himself the robber. The hamlet seethed with indignant excitement.

Then came tidings that a horse had been stolen during the night at the Chase farm. This gave Chapman a clue as to the direction the thief had taken.

"We'll have him!" he exclaimed. "We'll run the rascal down!"

They summoned Swett, the sheriff, and hitched up two of the fastest horses the place could furnish. By half-past seven, the president, cashier, sheriff, and Hubbard, the schoolmaster, then a powerful young man, were off on the main road in hot pursuit. They met Pinckney Danbridge eight miles below the village. He was sternly halted and bidden to give an account of himself. True, he was going in the right way, not the wrong, but suspicion had been making havoc with his reputation.

Pinckney made no mistake this time, however. Chapman's grim eye was on him, and he told the whole story, with no attempt to excuse himself. Chapman and Barron meanwhile were examining the valise. They smiled again. The money and notes were all there.

Barron went back with Pinckney and the money, to restore the horse and make explanations. But Chapman, the sheriff and the schoolmaster continued in pursuit of the robbers. By dint of

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

This is Living

To see a golden sunrise
At the dawning of the day;
To watch the flowers budding
As Spring again holds sway;
To see Fall's flaming colors
Against a sapphire sky;
To smell the fragrant bonfires
And know that Winter's nigh;
To hold a little baby
Close against my breast;
To set a table, dust a room,
Prepare clean beds for rest.

—Beatrice H. Southard,
28 Roosevelt Street,
Babylon, Long Island.

hard driving they reached Lombard's between ten and eleven.

At the tavern a singular state of affairs prevailed. The two bank robbers, who declared themselves to be officers of justice in pursuit of a horse thief, had immediately missed their valise and raised a commotion, pretending that their handcuffs and warrant had been stolen from the wagon. They had so threatened the landlord that the poor man was much terrified; and they had searched first the stable, and then the house, from cellar to attic. The red-headed boy, for reasons of his own, appears to have remained close-mouthed.

The rogues were ransacking a closet in the ell when the Waynor party drove up, but catching sight of the newcomers, both of them escaped by a back window and ran across a field toward a tract of woodland.

Chapman and the schoolmaster **are** said to have overtaken and captured one of the robbers; but the sheriff **lost** his man in the woods, and he was never caught. Nor did they bring the one whom they captured to Waynor. For, in point of fact, a most disagreeable surprise awaited Chapman when he took a look at his prisoner's face.

It was none other than his wife's younger brother, Wallace Codman, the "black sheep" of the family, who had run away fifteen years before. His first visit home to Waynor had been for the purpose of robbing his brother-in-law's bank.

Neither the sheriff nor Master Hubbard could ever be brought to say anything of the matter, but a story came roundabout by the way of persons at Lombard's tavern, that Chapman gave the ne'er-do-well a terrific "licking" with two horsewhips, using them both up on him, and then let him go with a promise to put him in the state prison if he ever showed his head at Waynor afterward.

Chapman did this out of regard for his wife, and never told her. She died eight years afterward without ever having heard of it.

When the particulars of the robbery were known and talked over, Barron, the schoolmaster and many others were of the opinion that some reward or token of appreciation should be given Pinckney Danbridge for the energy with which he had followed the robbers and recovered the bank's property.

But Chapman said, "No. If he **had** attended to his business as he **ought** to have done, the bank would not **have** been robbed at all!"

The Song of the Lazy Farmer

A LONG about this time of year when tater-diggin' time is here, I like to fork them tubers out, and tho my back ain't none too stout, I shake the dirt with all my might and watch them taters pop in sight. Then all the poison that I lugged to git them vines all sprayed and bugged is plumb forgot, I git a thrill to see spuds roll from ev'ry hill. Potatoes is poor folkses food, a man who's got a hungry brood of children plus, perhaps, a pup, is allus sure to fill 'em up and keep 'em growin' as they should when'er the tater crop is good.

When you are hungry for a snack, fried taters seem to fill the lack like nothing else, or if you bake them in their jackets, it would take a millionaire to buy a feast like baked potatoes, when they're greased with butter, or potato chips to chew on, make you smack your lips. Or you can have them mashed or boiled, with gravy; hunger sure is foiled when there's piled up there on your plate a heap of taters, when you've ate it makes a new man out of you, there ain't a thing that you can't do. The world is brighter and you feel, when you have filled up with a meal of taters, that life ain't half bad, so I am sure that Nature had an inspiration and a treat, to make them spuds for us to eat.

Delicious APPLE RECIPES

(Continued from Page 18)

cooked in the apples. A clear, glossy product with attractive color and fruity flavor with both tartness and sweetness is what one wants in applesauce.

Baked Apples

Wash and core apples of uniform size; allow about 1 teaspoon sugar per apple and a dash of salt if desired. Place cored apples in a baking dish with a cover, fill the centers with sugar, cover and bake in a hot oven (400°) for about 30 minutes. Time varies slightly according to variety. When done they should be tender, but not soft and should keep their shape. Let them remain in the covered baking dish ten minutes after removing from oven. This is to complete cooking and help them to keep their shape which may be destroyed if baking is completed in the oven.

Try These Variations

- 1—Use brown sugar, maple sugar or honey for sweetening.
- 2—Grated lemon or orange peel lends variety.
- 3—Fill cavity with chopped raisins or dates, nuts and sugar.
- 4—When apple is almost done, place a marshmallow on each one and bake until marshmallow is a golden brown.
- 5—Scoop out a little pulp and mix with well seasoned sausage meat, stuff into the center, sprinkle top of apple with brown sugar and bake until tender. Small link sausage may be skinned and the meat used instead of ground sausage meat.
- 6—Stuff grated cheese into centers and sprinkle on top.
- 7—Substitute grape juice for water in cooking; when done remove apples and add gelatine softened in cold water to boiling grape juice and pour over apples to set. Allow 1 tablespoon of gelatine per pint of liquid. Serve with cream.
- 8—Stuff centers with mincemeat. A lump of butter on top of each apple helps flavor. Serve hard sauce or small scoop of ice cream on the hot apple.
- 9—Use hard red or green spiced candies to fill centers. These add to the color scheme besides giving variety of flavor. Top with marshmallow or whipped cream.

Apple Crisp

4 cups sliced apples
1 teaspoon cinnamon
½ cup butter

½ cup water
1 cup sugar
¾ cup flour

Cut apples in ¼" slices. Put apples into buttered baking dish, pour water and cinnamon over them. Work sugar, flour and butter into a crumbly mass and spread over apple mixture. Bake uncovered in an oven (375 to 400° F.). Serve warm with whipped cream or top milk.

The famous strudel dough made in Hungary requires very careful handling and no little skill in order to roll

Buying a Blanket?

IF YOU NEED new blankets, I send for our new Home Service Leaflet No. 2, entitled "Blankets". Besides telling you how to get your money's worth when buying a blanket, it gives clear directions for washing blankets and for storing them. Address your request for it to Home Department, *American Agriculturist*, Box 367, Ithaca, N. Y., and please enclose a 3c stamp to cover mimeographing and mailing charges.

and stretch it paper thin without breaking. The recipe given here is the American variation of

Apple Strudel

Make a rich baking powder biscuit dough. Roll it to an oblong less than ½ inch thick. Spread the dough with softened butter and cover thickly with chopped apples (about 1½ quarts). Sprinkle with ½ to ¾ cup sugar and ½ teaspoon cinnamon or a pinch of nutmeg. Roll up like a jelly role, fasten edges and ends. Bake in a buttered pan in an oven 400° for about ½ hour or until nicely done and the apples are cooked.

Apple and Ham Casserole

Rub well a one-inch-thick slice of ham with brown sugar and place in a baking dish. Stick two cloves into the ham and add one tablespoon onion juice. Peel, core and quarter enough tart apples to cover the ham.

Sprinkle apples with 4 tablespoons brown sugar and dot with 1 tablespoon butter cut in bits. Add 1 cup boiling water and bake in covered dish until meat is tender.

Apple and Cabbage Salad

Mix equal amounts of chopped cabbage and apple cut into match-like pieces. If the apples have an attractive red skin, do not pare them since the color adds to the attractiveness of the salad. Mix with boiled dressing and serve on lettuce.

Apple Peanut Salad

Core and chop apples which are slightly acid and mix them with half as much chopped celery. Mix a dressing of five tablespoons of lemon juice and one tablespoon of peanut butter. Mix dressing through the apples and celery, and season with salt and cayenne pepper. Chill the salad, serve on lettuce, and garnish with peanuts.

Caramel Apples

1 cup white sugar
1 cup brown sugar

½ cup water
½ cup vinegar

Cook all together to the crack stage. Stick wooden skewers into medium sized red apples and dip each in syrup. Drain on heavy wax paper.

Oatmeal Apples

Core apples, leaving large cavities. Pare and cook in a syrup made by boiling 1 cup sugar with 1½ cups water for 5 minutes. When the apples are soft, drain and fill cavities with hot well-cooked oatmeal. Serve with cream and sugar. Oatmeal apples make a delicious breakfast food for the children. Cooked tapioca or sago may be used instead of the oatmeal to make a wholesome luncheon or supper dessert, served with cream and more sugar if desired.

ADDITIONAL APPLE RECIPES

Mrs. Hockett has prepared a mimeographed leaflet containing more of her delicious, tested apple recipes. If you would like this, just send a 3c stamp to Home Department, *American Agriculturist*, Box 367, Ithaca, New York.

Kernels, Screenings and Chaff

By H. E. BABCOCK

RIGHT after I wrote this page for the last issue of the *American Agriculturist* I took a sleeper for Chicago. In Chicago the next morning I boarded a plane for San Antonio, Texas. Thus began one of the most interesting and stimulating experiences in my life, an experience which did not end until ten days later when I took a sky-sleeper out of El Paso, Texas, to fly the 2200 miles between El Paso and Newark, New Jersey, — in approximately thirteen hours.

OBJECTS OF TRIP

I took the trip to acquaint myself by first-hand observation with the raising of livestock on a large scale in a country where animals do not have to be fed or housed in the wintertime. I also wanted to see first-hand the growing of feed crops for livestock by irrigation. Due to the zeal and thoughtfulness of my host, H. L. Kokernot, Sr., of San Antonio, Texas, I saw all I set out to see and a lot more. I also fell in love with the Southwest and with Texas ranching in particular. On my way home I found myself already planning my next trip to the Lone Star State.

CATTLE-RAISERS' MEETING

My host took advantage of a meeting of the Texas and Southwestern Cattle Raisers Association, which was being held at the King Ranch, to introduce me to the leading cattlemen of Texas. Since a feature of the meeting was a chuck wagon barbecue on the King Ranch and an inspection of some of its herds, I also got my first insight into how both the cowboy and the cattle in his charge live on the open range. It is a life filled with plenty of hardships at times, but for the most part an easy-going, healthful existence for both man and beast.

The meeting of the Association, judged by the way it was conducted and by the problems discussed — mainly how to balance the budget and how to get the non-member to carry his share of the load — was for all the world like the meeting of any other farm organization anywhere else in the United States. The officers praised each other's good work, the employees praised the directors

Our hothouse lamb flock is getting off to a great start this fall. Seventy odd lambs were dropped in the month of September and more are arriving every day. Due to the drought the ewes are not in as good shape as we usually have them, but they seem to be milking well and their lambs give promise of being just right for the holiday markets.

and each other, and the inevitable politician was present and made his speech. Finally, all important matters were referred en bloc to the Executive Committee to work out and the membership adjourned to enjoy the barbecue.

Despite the similarity of procedure in the meeting to all other farm meetings, the ranchers present, by their picturesque dress and their friendly, easy bearing, were a distinctive group of men. Mostly they were big fellows who gave the appearance of being powerful men who were going a bit soft. This softness and tendency to extra weight I later discovered was probably due to the almost universal substitution of the Ford and the Plymouth for the cow pony. During all my stay in Texas I saw only one bona fide rancher on a horse; the rest were all doing their herding in automobiles.

HIGHLAND HEREFORDS

From the King Ranch, which is near Corpus Christi in the southeast corner of Texas, my host drove me by more or less easy stages — five or six hundred miles a day with an

automobile is nothing to a Texan — to the Davis Mountains in the southwestern part of the state. These mountains are the stamping ground of the Highland Hereford Association and it is on the ranches in them that the famous feeder calves which are annually shipped from the towns of Alpine, Marfa, and Fort Davis, Texas, originate.

From everything I could tell, it is a safe rule to assume that, given the same range conditions, the higher the altitude the better a cow will do. For example, at the King Ranch, which is just above the level of the Gulf of Mexico, it has been necessary to rely largely on Brahma crossbreds in order to get an animal tough enough to survive the heat and resist the

brought such a good return that even if we have to sell the remainder of last spring's pig crop at lower prices our little herd of brood sows will again turn out to be profitable.

* * *

One of the pictures I hope to show before long on this page will be of a senior yearling Guernsey heifer which won in the 4-H classes at the Tompkins County and State fairs for Jack Connor of Ithaca, New York. Sometime I want to tell you about Jack and how he, a town boy, by sheer grit and perseverance, is rapidly becoming an unusually competent young farmer.

* * *

All our seedings are up. There has also come up along with the tiny tim-

Mexican cowhands on the O6 Ranch, Alpine, Texas, starting out for their daily rounds.

flies and mosquitoes, while in the Davis Mountains, five thousand feet higher, strains of purebred Herefords have been brought close to perfection for beef cattle.

In the mountains I was entertained by my host and his son and wife at their O6 ranch home, which is the headquarters for 250,000 acres of grazing land and for the management of some 20,000 Hereford cattle, to say nothing of five or six hundred head of horses thrown in for good measure.

During my stay I made a rather complete photographic record of the raising of beef cattle on open range and some observations which may be of value to the readers of this page. My pictures are not yet available, however, so I will defer showing them and describing my ranch experiences until the next issue of this paper.

* * *

Farm Notes

Hank had one lot of spring pigs ready to go when pork made its spectacular advance last month. Nineteen shoats averaged 228 pounds apiece and

othy, alfalfa, and clover plants, a lot of volunteer oats and barley. We are inclined rather to welcome this development because we have a feeling that this volunteer grain will tend to protect the grass seedlings and hold snow this winter. The way things look now, it is going to take all the protection the new seedlings can possibly have to enable them to come through the winter and make a hay crop next summer.

* * *

We sowed seven and one-half acres of stiff strawed, smooth awned winter barley on October third. This is at least a week later than we would like to have gotten it in the ground, but there was no chance to sow the crop until it rained and then when the rain did come it delayed us a few days.

The crop is sowed on a well protected, well drained field which is in a rather low state of fertility. Five acres of wheat are sown alongside the winter barley for the purpose of making a rather careful check on the comparative yields of winter barley and wheat grown under comparable conditions.

Tackled Wrong Farmer

A POULTRY BUYER who is not averse to adding to profits by sharp practices recently ran up against the wrong farmer in central New York. The price for a bunch of chickens was agreed on, but after they were all in the buyer's coops and on the truck, he decided the price was too high, and began arguing for a reduction. The poultryman was firm—we might even say militant—about the proposition. He said: "They are your chickens and I expect full pay."

A proposal on the part of the buyer to let the chickens out and leave without them was met with a firm "no", which refusal was backed up by the appearance of three husky hired men who apparently were not averse to a rough and tumble scrap if necessary. The poultryman maintained, with reason, that he had attempted to maintain a disease-free flock and that he didn't propose to have chickens released that had been in coops which might have contained sick chickens.

Furthermore, the poultryman refused to let the buyer leave the place, suggesting that force would be used if necessary. The buyer hung around for several hours, and finally capitulated and paid the full price.

It is interesting to speculate what might have happened on a farm where less manpower was available to back up the argument, or if the deal had been conducted with a farmer who was less determined to stand up for his rights. In that case the proper step would have been to call the nearest State Trooper and ask that he come to the farm immediately. Had the buyer had the nerve or been permitted to release the chickens and had then refused to pay, there would have been no comeback except legal suit to collect pay for the chickens and for any possible damage as a result of spread of disease.

The poultryman who mentioned this story is strong for state legislation to license and regulate poultry buyers. Such a proposal would receive a lot of support, not only as applied to chicken buyers, but to truckmen who handle other farm produce. As it is now, the situation is unbearable. Many buyers, of course, are entirely reliable, but oth-

ers who understand that the deal is for cash will promise to pay next week after the load is all on the truck, or will stop payment on checks or give checks without money in the bank to cover them.

Your ideas as to how this could be controlled will be welcome.

* * *

Trail of "Rubber" Checks

"A man with an Ohio license stopped in at our gas station and said that he had had some car trouble which used up all his ready cash. I let him have some gas and three dollars in cash. His check came back marked 'no account.' Is there anything I can do about this?"

This situation has all the earmarks of petty fraud where a small-time crook came into another state with the definite intention of leaving a trail of small bad checks. We are passing this along to the State Police who will be on the watch for this man in New York. Unfortunately, the amount is so small that it is hardly worth while to prosecute in another state. That is exactly what this fellow figures on.

The chances are that this man will not return to New York, but will try his scheme in some near-by state. You always take a risk when you cash checks for strangers, but this is multiplied when he is a resident of another state. One of the earmarks of this scheme is to make the check a little bigger than the bill in order to get some extra cash. We might say that the stolen gas, for that is what it amounts to, goes under the head of travelling expenses, and the cash secured is listed under profit.

* * *

Try and Find Him

"The other day a truck with New York State license plates drove into our place and tried to sell us some linoleum. We did not buy. We bought some under similar circumstances some years ago and we were so badly stung that we want to warn readers of *American Agriculturist* so they will not have a similar experience."

Our subscriber was wise; plenty of readers have lost money in this so-called linoleum racket. A common experience is to buy enough for a room, only to find after the salesman has gone that there is not enough to cover the floor. Frequently also, the quality turns out to be very disappointing. The safe way is to buy from your local dealer and then if things are not right, you know where to find him.

* * *

Baby Chick Claims

The *American Agriculturist* Service Bureau does not handle baby chick complaints against hatcheries that do not advertise in our columns. To take advantage of our "fair play" policy, buy baby chicks from hatcheries advertising in these columns, and when you order, say, "I saw your advertisement in *American Agriculturist*."

* * *

Want Work

A widow 44 years old with a son 20 years old would like to get employment on a farm as housekeeper and hired man. They have had farm experience.

If you are interested, address your letter to H. T., *American Agriculturist*, Box 367, Ithaca, New York.

Remember last winter? Enjoy Happy Heating next winter **ACT NOW!**

Build your defense line against the onslaught of wintry blasts by installing a **UTICA HEATING SYSTEM** *now*. Enjoy the warmth, comfort and convenience of a **UTICA HEATING SYSTEM** without making any down payment.

FIRST PAYMENT IN JANUARY

UTICA HEATING SYSTEMS are economical both in first cost and in the amount of fuel they use. They will assure you complete heating comfort and you can install one right now without any down payment and for as little as \$10.00 per month, taking as long as three years to pay. Don't neglect this opportunity to secure happy heating on easy terms and at comparatively small cost. Mail the attached coupon today.

STEAM or HOT WATER BURN COAL, OIL or WOOD

You can secure any type of **UTICA HEATING SYSTEM** you desire... steam, hot water or vapor... to burn coal, oil or wood. **UTICA HEATING SYSTEMS** are noted for their scientific design, economy of operation and lasting quality. With a **UTICA HEATING SYSTEM**, you can be sure of a comfortably heated home for many years to come. Our dealers can change over your present heating plant without fuss or bother and while prices are right and mechanics available. Install a **UTICA HEATING SYSTEM** now while labor and materials are at their lowest.

AUTHORIZED DEALERS EVERYWHERE

UTICA dealers are skilled heating men and they will gladly make an analysis of your heating conditions to determine the best type of heating system for your particular home, without obligation to you. All **UTICA HEATING EQUIPMENT** is **BACKED BY A GUARANTEE BOND!** Don't miss this opportunity to investigate, without obligation, how reasonably you can install a fine new **UTICA HEATING SYSTEM** on easy terms.

A Visit to the Land of COD and CRANBERRIES

By E. R. EASTMAN

Here is the way cranberries grow on the vines, running close to the ground in the cranberry bogs. The berries turn from green to red as they ripen, and if left long enough to a dark red. The brilliant color makes cranberries one of the most attractive dishes on any table. Write to Cranberry Cannery, Inc., South Hanson, Massachusetts, if you want a lot of recipes for preparing cranberries in many different, attractive dishes.

(Below): Look at the great volume of cranberry sauce made by the farmers' cooperative organization known as Cranberry Cannery, Inc., and then say if you can that farmers cannot work together in cooperative organizations. This is only one of the several large buildings and properties of Cranberry Cannery on Cape Cod.

Harvesting cranberries on Cape Cod. Read the story on this page on how it is done. The berries are screened, scrupulously cleaned, cooked into cranberry sauce and canned under Cranberry Cannery's brand names of Ocean Spray, Bog Sweets and Makepeace. A helpful and invigorating drink called Cranberry Cocktail, and other products are also made.

ON THE INVITATION of my good friend, Mr. Marcus L. Urann, President of a farmers' cooperative called Cranberry Cannery, Inc., I boarded a sleeping car at Syracuse last week, and climbed out rather stiffly the next morning, Saturday, October 14, in the Yankee's great town of Boston. There I was met by Mr. Urann's car, and went down to his home at South Hanson, Massachusetts, to see how cranberries are grown and marketed by Cape Cod growers, working together in one of the most successful cooperative marketing enterprises I have ever seen.

Five minutes after I got to South Hanson, Mr. Urann said:

"Come on. Let's go down to the bogs and watch them harvest the cranberries."

It was a beautiful October day. We followed rough, narrow roads, winding between scrub oak and other brush glowing with the scarlet of autumn, and every few minutes my friend would point out a piece of level land, ranging anywhere from one to a hundred

acres, where cranberries grew.

A cranberry bog is very valuable, being worth from one to two thousand dollars per acre. To prepare a bog for cranberries, a piece of swamp land is chosen, with good drainage and plenty of sand and water nearby. Ditches are dug through this land to drain off the water, the trees and bushes are cut, and the stumps pulled. Then the top layer is taken off, uncovering a rich peat soil underneath. This is graded until it is as level as a floor, and then over this bed is spread a layer of clean, white, loam-free sand taken from the nearby sand pit. In May or early June small cuttings of cranberry vines from another plantation are set in the sand 10 inches apart. It takes from three to four years before these vines begin to bear.

Because the soil and conditions have to be

just exactly right for cranberries, their production is very limited. There are 14,000 acres of cranberry plantations on Cape Cod, which produces 75 per cent of the world's cranberries. The rest are grown in New Jersey and Wisconsin, with a few in Washington and Oregon.

A large supply of water has to be available, and so controlled by dams and irrigation ditches that the plantation can be flooded at will and drained off very fast. The ground is perfectly dry when the cranberries are harvested. The bogs all stand under water during the entire winter to pre- (Turn to Page 11)

A New Idea for Fruit Marketing

By FRANK BENEWAY,
Wayne Co., N. Y., Fruit Grower.

ON AUGUST 7, 1939, at a meeting of the National Apple Institute held in Cincinnati, Ohio, Porter Taylor of the Federal Surplus Commodities Corp. gave me a new idea in marketing. I had been sent to Cincinnati at the expense of the New York State Farm Bureau Federation to meet Mr. Taylor and to try to persuade him that the Federal Surplus Commodities Corp. should buy surplus peaches in western New York. A short time before that Niagara County fruit growers had re-

quested Leo Muckle, former County Agent and now Assistant County Agent Leader, to try in some way to help Niagara County growers move their large crop of peaches.

When I met Mr. Taylor in Cincinnati, he pointed out to me that peaches are not a commodity that can be easily handled on a surplus purchase basis because the crop is always so large, there is so much money involved, and because, being a perishable crop, it has to be moved rapidly. That, of course,

was discouraging as it indicated that I would be unable to accomplish the job I was sent to do; but, as I have already hinted, he gave me a new thought that was certainly worth the trip.

The thought was that if each state would avail itself fully of the machinery at hand, the job of marketing the peach crop could be done. The machinery Mr. Taylor mentioned included the facilities of all farm organizations, the radio, the State Department of Agriculture at Albany, the State College of Agriculture at Ithaca, chain and independent stores, farm papers, and newspapers.

I came home somewhat discouraged because the task of building an organization to bring these facilities to-

gether seemed almost impossible. On the other hand, the more I thought about it, the more I was convinced that farm people have never used all of the modern advertising facilities which have become available in recent years.

After I returned from Cincinnati, Leo Muckle called a meeting of growers' committees from Niagara, Orleans, Monroe and Wayne counties. I told the group what had happened at Cincinnati, and suggested the possibility that we could use all of the available facilities to move our peach crop. The men at the meeting took to the idea, and another meeting was planned to include all store groups and representatives of all interested organizations.

At this second meeting plans were made for one of the most constructive marketing jobs I have ever seen done. The cooperation of chain stores and independent store groups was given so fully and freely that the growers' committees were able to coordinate all phases of the work and to clear the necessary information back and forth. Briefly, growers' committees reported supplies, including varieties ready for market, to the central committee, and stores reported the amounts they could use. The stores advertised the crop wholeheartedly, and during the market drive the peach market sagged only once following two very hot days when peaches became overripe. As a result they could not be carted to distant markets and had to be dumped locally.

The plan worked so well that we are now following the same procedure for apples. Growers and store men are being called together soon. The brunt of the drive will be carried by the Farm Bureau and by the New England Apple Institute through its manager, Tom O'Neil. Chain and independent stores will give full cooperation, and the help of all other available farm organizations will be solicited. The apple drive will have the advantage of having Tom O'Neil as a paid worker and a contact man to help clear information between all groups.

I would like to remind all of you who are members of the Apple Institute—in fact, all apple growers—to send in your contributions and pledges to the Apple Institute if you want to get more money for your apples. We need financial help and cannot carry on without it. I believe in this plan so thoroughly that I believe an investment in it is even more important than purchases of spray materials.

In the last decade corporate chain stores and independent store groups have developed rapidly. Consumer demand for better quality food, plus more efficient merchandizing, have made economies necessary. The store groups have tried to meet these economies, both from the standpoint of handling food efficiently and from the standpoint of profits. The farm groups have been asleep in not fully availing themselves of the possible facilities for distribution and advertising which these store groups can give and seem willing to give.

The essence of the whole matter is that when farm groups can get a living price for food through cooperation and coordination with store groups, and when the store groups can also make a legitimate profit while fully serving consumers, then and only then can we solve our distribution problems. If any group should fail to do its part with price assassination of farm products resulting (and this has occurred in the past) then our powerful farm organizations should have figures and facts developed through scientific marketing research to enable them effectively to do something about it.

The marketing and distribution problem concerns every living American. I appeal to everyone concerned to cooperate in solving this great task. Let's go forward—all groups together.

MORE ROOM • EASIER HANDLING • MORE RIDING COMFORT

More of EVERYTHING a Farmer wants!

IN A 1940 FORD you get more room, greater quiet, a finer ride, easier handling, and a much more luxurious car than ever before. There are no less than 22 important 1940 improvements, including the following:

- Greater legroom, elbowroom; new seating comfort
- New finger-tip gearshift on steering column (All models, no extra cost)
- Improved soundproofing; quieter operation
- New interior richness throughout
- Self-sealing hydraulic shock absorbers
- New front window ventilation control
- New instrument panels; new 2-spoke steering wheel
- Improved springing; new torsion bar ride-stabilizer on all 85 h.p. models
- New Sealed-Beam headlamps; beam indicator on dash

AND THE ONLY V-8 ENGINE IN ANY LOW-PRICED CAR!

FORD V-8 FOR 1940

Your Dog and My Sheep

By LEWIS C. WATT*

SHEEP by the millions once grazed New England hillsides, sheep in flocks which brought prosperity to their owners and furnished foundation breeding stock for other flocks in the four corners of the globe. Economic changes moved the sheep industry westward in the latter half of the last century, but today new economic changes are bringing the center of sheep population slowly eastward again. There is a renewed interest in sheep in the East and there are many who feel that they can and will help bring to New England agriculture and New England farms a greater prosperity and productivity.

The greatest drawback to an increased sheep population in New England today is the menace of dogs—dogs that kill and destroy, dogs that in a few moments leave dead and bleeding what were once animals resulting from years of work and planning, animals in which the owner had taken a pride, had counted upon for part of his daily bread and living, animals that were as much a part of the wealth of the country as machines in a factory or the automobile in your garage.

While sheep owners are most vitally interested in the dog problem, it applies to all farmers. Poultry, swine, even horses fall victim to the killer dog to the tune of thousands of dollars every year. You question horses and cattle? A neighbor of mine shot three dogs not so long ago for attacking a bunch of his heifers and I know of at least one case of a horse being killed.

Probably you are a dog lover. So are most sheepmen and farmers. In short, aren't we all? So it's everybody's problem. Farmers don't want their livestock molested, dog owners don't want their dogs shot, hunters want to hunt on farm lands (and the owner is going to post his place if dogs are bothering him), the taxpayer doesn't want to have his tax money paid out for stock killed by dogs and everyone wants to see prosperous farms for they mean good times for all.

So what should we do about it?

All of the New England states have dog laws, some better than others, all good if properly enforced or, better still, if people will live up to them without being forced to do so. Are you, as a farmer or dog owner, familiar with yours? You can get a copy of them from the Department of Agriculture at your State House.

The first requisite in them is, of course, that all dogs be licensed and a license tag with required data to be affixed to a collar around the dog's neck. Animals not thus taken care of are required to be put out of the way by an appointed dog warden. Connecticut, for example, has about 135,000 dogs and 7,000 sheep. What chance have the woolies if there is not some restriction on dogs?

Reimbursements for stock killed are provided for, to be paid for from the money collected by licensing. But this is not always satisfactory. Too often those whose duty it is to sit in judgment on such cases are not familiar with sheep values. Money cannot make up for thought and time and affection put into the building of a flock. Dollars and cents cannot offset the dis-

couragement of having a flock killed and maimed, necessitating a new start, especially if the owner is getting on in years.

Speaking of money, figure what the amount would be if all the dogs in your state were licensed at the going rate, as they should be. Quite a respectable sum, isn't it? The balance, after paying for damages done by dogs, law enforcement, etc., is split up among the various towns and districts contributing, to be used for libraries, schools, etc., depending on the law. Naturally, the more money taken in and the less paid out for damages, the more there

is for constructive work without taking it from other moneys.

Every town has its stray dogs, animals that do great damage to livestock, untold damage to wildlife and add danger to the lives of other dogs as well as people. These dogs should be eliminated. That's sound economics. Every dog should be licensed and properly housed, fed and cared for. And its owner given a copy of his state's dog laws.

Still there is liable to be trouble. Imagine, if you can, a person who will deliberately turn his dog into a field where livestock are pastured, encourage the dog to chase the stock and then laugh at what he calls "the fun". Oh, yes, it happens. Only too often.

Some dogs are natural killers. That kind must be kept under close watch or the owner is going to find a damage suit on his hands or some day just be minus a dog. One old sheepman had the problem summed up in his mind when asked for an opinion. "Shoot 'em—dig a hole—bury 'em—keep your damn mouth shut—." You wouldn't want your dog to end up that way, would you?

Like people, some dogs just get into

bad company and go wrong. So know where your dog is. It will save yourself and your neighbor grief.

The livestock owner must do his part by knowing where his stock is, keeping them on his own property, providing night corrals and giving his animals every possible protection. Sometimes it is a stockman's own dogs that go wrong, and in that case they must be handled like any other killers. There is no justification for any partiality.

The answer to the dog problem is co-operation between dog and livestock owners and good, fair dog laws, properly enforced. It is to everyone's advantage that strays be eliminated, that all dogs be licensed and properly cared for, that killers be taken care of.

The dog is man's best friend, the sheep one of the farmer's best friends. Let's try and see to it that the dog owner and sheepman—and all livestock owners—have no reason to be other than friends.

Farm Products!**

MOBIL OIL—gives "Balanced Protection." All good oil qualities—not just one or two.

MOBIL GAS—delivers "Balanced Performance." A scientific blend of every good gasoline quality.

POWER FUEL—special tractor fuel. Smooth, even-burning, powerful, economical.

MOBIL GREASE NO. 2—the all-purpose farm grease. "Half as much lasts twice as long."

MOBIL OIL GEAR OILS—all grades. Highest quality.

KEROSENE—pure, clean-burning. Refined by experts.

WHITE GASOLINE—Finest quality! Clear-burning in gasoline appliances.

BUG-A-BOO—kills insects quickly, surely. Stainless.

SANILAC CATTLE SPRAY—won't irritate eyes or hide. Effective all day long.

He has lower-priced lubricants also—made by the makers of Mobiloil—economical for equipment whose age or condition does not justify the highest grade.

**PITMAN BEARINGS
"KEEP COOL" WITH
MOBIL GREASE NO. 2**

Keep Pitman pin bearings running cool—protected from wear.

Use Mobilgrease No. 2. It resists heat—has the heavy body needed to cling to the bearing surface.

THE *Editorial* PAGE

BY E. R. EASTMAN

Address all mail for Editorial or Advertising departments to American Agriculturist, Savings Bank Building, Ithaca, New York.

Don't Increase Production

IN A RECENT speech, Secretary Wallace of the United States Department of Agriculture, said that the European War should make no great change in farm plans for increase in production, and the new AAA conservation program for 1940 does not provide for any large increase in production.

That is right. One of the chief reasons why American farmers have suffered so grievously in recent years is that they produced so abundantly in order to feed the world during the last war that they never were able to slow down enough to fit the decreasing demand when the war was over. People went foolish about food production — parks were plowed up, marginal land and boarder cows pushed to the limit. When the war was over, we kept right on. Result: years of low farm prices. A study of world food supplies shows that, even if the war continues, there is enough on hand with a normal planting next spring to be more than sufficient.

In making plans for the future, every farmer, every manufacturer, and every other citizen has the experience of the other world war to guide him if he will be smart enough to use it. If we do use that experience, we may avoid some of the terrible effects of the last war. Of course, the chief thing to remember is that we nearly lost our shirt in the last war, and if we get into this one, everything else may go.

Temperance by Local Option

WHEN I was a small boy, liquor was sold in almost every small town, but I lived to see the day when it could not be bought in any small or large town in my own county. The principle of local option did the trick.

But then the great mistake was made of trying to take in too much territory. We passed national prohibition and tried to dry up the cities. That was an impossible job, and will continue to be at least in our time. Not only did we fail in making national prohibition work, but the plan brought liquor back to the small towns.

Now we must start all over again, and there is only one way by which it can be done. That is by local option, the plan that was used successfully before. There is no doubt that a majority of the citizens in practically every village and town in the rural districts are against the sale of liquor in any form. That majority should keep working in fair and persistent ways until they succeed in bringing the matter to vote.

Why He Buys Oranges, Not Apples.

"The apple editorial made me wish for a particular slant in apple articles. I love to eat apples, apple pies, apple sauce, apple dumplings, and apples in the form of sweet cider. Yet I and my family undoubtedly buy several times as much oranges and grape-fruit as we do apples. After we have used our own fruit, we buy from Florida and California, not New York. Why? Because we never know what we are going to get if we buy New York apples. Heinz 57 varieties has nothing on the number of New York apple varieties. If we buy in a store we find a sign 'cooking apples', which can mean anything, and for a winter's buying does mean about everything that can be called an apple.

"In other words, if I buy a California orange I

am going to get one of two things, and both good, navel or Valencia. If I buy a New York state apple of any grade from the finest to the poorest, I am taking so many chances of getting what I don't want that I buy the oranges instead.

"I never want to criticize New York apples or anything else without at least trying to offer a remedy. Here it is. First, let the A.A. very often in the apple marketing season keep mentioning what the different varieties are good for, and why. Second, get after the grocery trade to sell apples by variety. Last, encourage the marking of apples—

and potatoes — by variety, in order that the consumer shall know what to buy.

"Last Christmas I roomed with Professor Tukey at the Richmond meeting of the A.A.A.S. He carried with him a lot of New York apples, some of the finest I ever

ate. If I could get apples like those when I wanted apples, I would use many times what I do now. How about some shorts or at least notes on those wonderful New York apples, and anything else you can do to help a potato grower get what he wants in apples?"—D. D., New York.

THE letter speaks for itself. *American Agriculturist* has done and will continue to do everything it can to increase consumption in Northeast apples, which are the best in the world. (See apple recipes, last issue). But of course most of the job of marketing apples must be done by the growers themselves, and they cannot do it as individuals.

On Page 1 this time is the story of how the cranberry growers of Cape Cod have doubled prices to producers in a few years through or-

FAMOUS TREES

This is the famous LaFayette Tree, which stands close beside the main highway (Routes 5 and 20) just west of Geneva, New York. The age of this tree is disputed, but on June 8, 1825, 114 years ago, it was a large tree, casting ample shade to shelter General LaFayette when he visited America and was welcomed by the citizens and militia of Geneva.

ganization and advertising. The job of marketing apples is more complicated and difficult than it is for cranberries. Nevertheless, other fruits will continue to crowd out apples, and producers will continue to take low prices until they get together on a marketing and advertising plan.

Oppose Daylight Saving

"Be it Resolved that we do strenuously object to voting by city residents alone on Daylight Saving as being a flagrant disregard of rural opinion and, as such, it is an injustice, is undemocratic and renders null and void any decision which is based upon such voting."

THAT resolution, passed by the Chenango County Farm Bureau, represents the large majority of farm opinion on Daylight Saving. It would seem that business men of villages and small upstate cities, who are in such large measure dependent upon good cooperation with surrounding farmers, should begin to lay the basis for better understanding between city and country by giving more consideration to how farmers feel about Daylight Saving.

There are many jobs on the farm, like haying and harvesting, that just don't fit into a Daylight Saving schedule. Often the best time of day for handling hay and grain is the late afternoon, which is quitting time on Daylight Saving. If a farmer attempts to run on old time, then he is up against the problem of trying to make his activities and his business fit in with the nearby village and city which is on Daylight Time.

It is possible that if all farmers and farm organizations would express their attitude in a way similar to the resolution above, city and village men would realize how farmers feel about the Daylight Saving nuisance and cooperate.

Eastman's Chestnut

WHEN my side kick, Hugh Cosline, Associate Editor, read the chestnut which appeared last time about the cow that gave such a large mess of milk, he told me the following story which a cousin of his dad's used to tell:

"You know how I like to hunt. Some years ago I went to visit an old crony by the name of Bill Abbotts, who liked to roam the fields with a gun better than he did farm work. Along about sundown Bill said to me:

"'Wall, I guess I better find the old cow and milk her.'

"'Where is she?' said I.

"'Oh, out in the cornfield!'

"Then I followed Bill out and sat on the fence while he went into his corn to look for his cow. After some rattling around I heard him addressing the cow in very unprintable language, warning her that he would break her back if she did not stand still and be milked. Apparently, however, the warning had no effect, for I soon heard the cow dashing off through the corn, and Bill consoling himself by saying:

"'Well, I got enough for the tea anyway!'

"Personal Problems"

• This Page, Devoted to the Questions that Perplex You, Provides the Opportunity for Sensible, Impartial Advice.

IT IS A job for a scientific mind and years of research to find out just what kind of a little bug sometimes bites a perfectly sweet, amiable woman, charitable and easy to get along with, and turns her into a bitter, harsh-thinking tyrant as soon as her son brings home a young bride. And what imp of perversity turns a merry-hearted, tolerant young girl with never a sour thought in her little head before marriage into a headstrong, resentful-of-everything daughter-in-law, is beyond human knowledge.

Perhaps the greatest factor in turning a mother-in-law's heart against her new daughter-in-law is jealousy. Of her son, of course. After she slaved and sacrificed and planned and just forced Pa to send John to school, and just forced Pa to help John buy a car, and devoted her whole life to John, how can he replace her in his affections by that snippy little chit of a girl, who knows nothing and likely never will!

Yes, jealous mothers actually work up cases against their new daughters-in-law on homely trifles that matter not one jot nor tittle to adorning new husbands, as long as the bride presents a neatly powdered nose, a cute appearance and a warm kiss.

Keep Your Reserve

When you draw a mother-in-law like this in the marriage lottery, don't worry too much about her. Be nice and friendly but don't let her make you feel miserable and guilty as she will try to do by imagining herself slighted and imposed upon and abused terribly if you and John don't turn to her with every little problem that comes up. She'll make herself miserable for a few years until she finds it does her no good, then she will begin to get a shade more sensible, but don't ever expect to get really intimate with this type of mother-in-law. It can't be done.

Can't Be Sisterly

Then there's the mother-in-law who is jealous of her daughter-in-law because of a married daughter. Daughter-in-law has no right to a new frock if daughter can't have one. Daughter-in-law must not belong to a club if daughter is not asked to join. Daughter-in-law doesn't begin to make son do as much or come as often and take the interest in home as daughter and son-in-law.

When daughter-in-law goes to see mother-in-law in this case, she listens to a recital of what daughter has done and said and where she has been. If she displays a new dress, mother-in-law sourly remarks that Daughter-Grace had one just like that summer before last. If daughter-in-law tells of something she's done or some place she's been, she is rewarded by stony silence, often, as if her remark had not been overheard, or if mother-in-law is feeling extremely charitable that day, she may manage to reply in a weak voice that "no doubt you had a good time." And she stores up every move made, every word said, every stitch worn and hauls them out to relate to her daughter when they are together.

Naturally such doings soon turn the son against his mother and sister, with the result that close companionship is broken off between members of the family. Have as little to do with your in-laws, if they are like that, as possible. They will keep you in continual hot water. The aim back of it all in the mother's mind is to keep the two families of children from being good friends, so that she may bind her daughter closer to her own side and have something to talk about. Take no stock in her sighing because "the children don't get along with each other since they're married." She wouldn't have it otherwise.

Then there is the managing mother-in-law who can tell you just exactly what is wrong every time, and gives you no credit for knowing anything. Oh, she is subtle about it, of course. She knows that John and Betty, poor children, need a guiding hand when they are just setting out and

Your Problems

YOU MAY find on this page suggestions for solving some of your own problems. If you do not and if you have a personal problem on which you need advice, write a letter to "Personal Problems" AMERICAN AGRICULTURIST, P. O. Box 367, Ithaca, New York. Out of her wide experience with thousands of troubled people, our Personal Problems editor will write in an encouraging, sympathetic way; although when the occasion warrants it, she will not hesitate to speak frankly where the fault may lie with you.

Your letter will be held entirely confidential. You will receive a personal answer by mail, and if you so request, it will not be published on this page.

they will appreciate her showing them the way they should go. Well, if John and Betty squandered half of John's pay check every week and Betty bought drapes that sun-faded and a bargain skillet so thin and poorly made that it burned the chops black every time she used it, and if John bought a new car and contracted to make payments each month that will keep him wearing his wedding suit for best for four years, it's better for them to learn these mistakes for themselves than to have Mother always warding off such disasters.

Let's Experiment

The only sure way is to learn from experience and young married couples are entitled to such deliciously foolish experiences together and without outside interference. If you draw a managing mother-in-law, thank her sweetly for her advice, take as much of it as you want to and disregard the rest. She'll never forgive you, of course, but it will give her a never-failing topic of conversation with her friends on how you children are headed straight for the rocks and that you just won't listen to advice from those older and able to advise you.

But, among the unpleasant mothers-in-law, there are a lot of good ones. When you draw a charitable mother-in-law; one who lets you alone to run your own affairs, who stands by to help if you ask her, who does not talk about you and cause petty jealousies between you and other in-laws and who really welcomes you into the family circle and makes you feel that she values you, cherish her as you would a priceless jewel. Set her on a pedestal in your heart and let her know by frequent manifestations how much she is appreciated.

Ignore Anonymous Letters

I have a good friend living in the community about whom there have recently been tales told. I have never seen any evidences of the truth of these stories, however. Lately, I've received two anonymous letters, directing me to tell this woman's husband what is going on behind his back. I have burned the letters and do not feel that I should cause any trouble between this couple. What do you advise?—I. S.

YOU have treated the letters exactly right. Burn them and forget their contents. Under no circumstances be a tale-bearer to this woman's husband. There may be no truth in the ugly rumors concerning her...and the cowardly writer of these letters may be only trying to break up the friendship that exists between you two women. Pay no attention to anonymous correspondence....ever.

Beware of "Dictator-Mother"

I am an embittered, frustrated woman of 38, living alone in a big house with my mother, whom I al-

most hate. Everyone says that we make such a good pair...that our relationship is so beautiful. If they only knew!

My mother has ruled me, body and soul, all my life. I never so much as selected a dress on my own responsibility. We never had what I might suggest for a meal; I could never fix up the house. More serious, Mother never approved of any friends I had, girl or boy. There was a boy I was interested in... years ago...and he returned the interest, but nothing came of it because Mother ridiculed him to me and managed by sly little ways, all her own, to break up what might have been a match.

Finally I just gave up. Spirits break after so much. I've just lived through the years; my father died some time ago, leaving us together here. Mother isn't so young and active as she was and requires a great amount of attention. Maybe I'll get my reward in Heaven...but that's too late. I'd as well never been born, for all life has meant to me.

Say a word, can't you, to warn girls against mothers like mine.—B. B.

IT'S HARD to warn girls against mothers like these, for it's an insidious condition that creeps up on one through the years and becomes recognized as acute after it's too late to do anything about it. It is only natural that girls hearken to their mothers and take their concern for them to heart when they are young, and for that reason it is hard for them to heed the danger signals.

Unfortunately, there are "leech-mothers" such as Betsy's whose self-interest and selfishness have made them turn their daughters into slaves to their every whim. They do it with the strong conviction that they are working for the girl's best interests, but as a matter of fact, quite the opposite is true. Cheating a girl of her birthright of friends, marriage and a home of her own, even though done under the guise of love, is a cruel thing.

A girl does well to hold out for a certain amount of independence early in life. She should be allowed to have a large voice in the selection of her clothes; she should be free to make

"In-Law-Itis"

IF YOU are, or ever expect to be, either a mother-in-law or a daughter-in-law, read the lead article on this page. The "Personal Problems" editor has taken this delicate situation to pieces with a few suggestions for inoculation against the ravages of this serious malady—"in-law-itis."

In a later issue, daughters-in-law will be placed under the microscope. Today, we view mothers-in-law.

Male "in-laws"—especially sons—may find these articles an aid to building up resistance to the disease.

friends, even though Mother criticizes the frocks daughter may choose or the friends she brings home. If daughter likes them, that is the important thing. (Provided, of course, the friends are acceptable as of the girl's own class and recognized standards.) Mother and daughter are bound to have differing tastes, but it is Daughter who should decide for herself. If your mother does not allow you to do so, watch carefully that you do not become relegated to the role of Betsy...it is one of the first danger signals.

Many mothers play up some physical frailty, such as a weak heart, that may not actually exist at all. Others use self-pity as a trump card to lay on the tender sympathies of a young daughter, to keep her tied to the apron strings. Others tell their daughter, over and over, how much they have done for her...the sacrifices made...the things they have gone without that she might have. If Mother harps continuously on these subjects as a means of winning arguments you may have with her, look out! (Turn to Page 21)

TODAY 13 OUT OF 17 TRACTOR COMPANIES MAKE

HIGH COMPRESSION TRACTORS

WHAT'S BEHIND THE NEWS that most leading tractor companies today are making high compression models? What does it mean to farmers who are thinking about buying new tractors soon? Simply this: Tractor companies know that farmers want the most powerful tractors they can buy for their money—tractors that have the power to plow through "tough" soil, or plow in higher gears, or haul more implements, and still be economical of fuel and oil. Tractor engineers have proved that a tractor gives more of all these advantages when it has a high compression engine, designed to burn regular-grade gasoline. Furthermore, such tractors give better idling and eliminate the nuisance of frequent adjustments of the radiator curtain. That's why 13 companies now make high compression models.

If you are thinking about buying a new tractor soon, whether it is a "baby" tractor or a heavy duty machine with a six-plow capacity, you will find somewhere near you a dealer that sells high compression tractors. Buy no tractor until you have talked with him. Ask him for the names of some of your neighbors who have bought high compression tractors. Find out what they say about fuel economy, added power, greatly decreased oil dilution. Then decide if that isn't the kind of tractor that will do your work quicker and save you money. Remember also that most low compression tractors can be converted to high compression by installing high compression ("altitude") pistons or cylinder heads and changing to a "cold" manifold setting or a "cold" manifold. Ethyl Gasoline Corporation, Chrysler Building, New York, N. Y. manufacturer of anti-knock fluids used by oil companies to improve gasoline.

Stacking alfalfa in Paradise Valley, Montana.

Roaming Western Roads

By PAUL WORK

EDITOR'S NOTE: As some of our readers know, Paul Work is spending a year in Berkeley, California, teaching in the University. He promises to give an occasional account of what he sees.

W E OF the East, I fear, are a bit inclined to view the West in terms of two great areas, the plains and the mountains, each a good deal alike throughout its spacious expanse. When we got here, even though we had only a very little time to stop and browse around, we learned that every county has a character all its own.

Paul Work

On our westward journey, we had a little habit of leaving the big transcontinental highways and taking to some of the smaller roads where tourists were few. We wanted to see Salt Lake and Logan and we wanted to see the Teton on our way to Yellowstone. So through the Star Valley of Western Wyoming we cruised for forty miles or so, and we liked it. There was an impression of self-sufficient well-being, of modest sized operations but a comfortable standard of living.

The people are Mormons and there were little chapels at the villages. The Mormons are substantial, God-fearing folk, well able to take care of themselves, and asking odds of none. Houses are not large but a good many new ones are being built. There is a power line and there are irrigation ditches to reach every field.

The farming is varied, dairy cows to supply the factories that make Swiss cheese, alfalfa, some beef animals and a bit of grain. White clover grows luxuriantly and fragrantly. There do not seem to be many tractors and the main reliance for power is on horses. Maybe alfalfa is cheaper than gasoline.

Paradise Valley

When we got to Paradise Valley in Montana, we made a stop at the ranch of A. W. Bowers, to take pictures of hay-making. This valley lies along the Yellowstone River, north of the Park, between the Gallatin and Absaroka ranges of mountains. Livingston is at the north end. The haying system is quite different from New York's. A dump rake is used to get the alfalfa into windrows. Then along comes the bullrake, pushed by a husky team, and itself pushing the hay until its teeth link in with the teeth of the big stacker. Now another team pulls a rope and the big gob of hay rises on the arc

of a great circle and the burden drops over on the stack to be spread out on top. And the stack right next was made last year! Mr. Bowers has 500 acres of alfalfa, 40 of timothy and clover, 25 of wheat, 20 of wild hay. Hay is sold rather than fed — when there is a market for it.

The farming troubles are a good deal the same as in the East—when there is a good crop, there is no price and when there is a price there is nothing to sell. Mr. Bowers has 1500 bushels of wheat from last year. Maybe he'll be glad he saved it.

Wheat in the Palouse

The Palouse Valley, famed far and wide for its wheat, is a bit different from any other wheat territory we saw. It is not far west of the Rockies so that it gets somewhat more rain than most of the dry country—as much as twenty inches a year. It is hilly country, not big ridges but abruptly rolling. Some of the planted slopes look too steep for a combine but that is the way they do the harvesting. The soil is brown, silty, of volcanic origin. They grow wheat only every other year. When there is no wheat, the land is summer fallowed. So there are just two colors, contrasting strongly—golden wheat and brown, bare soil. Farms are large and yields are good, commonly around 40 bushels. Farmers have good homes and seem prosperous. The farms are pretty big, one to three sections, and a section is 640 acres.

The summer-fallowing is a curious practice. It is not wholly a matter of getting together the rainfall of two seasons to make a crop, in fact that factor is probably not too important. With the soil as dry as it is, nitrification is slow. Another reason is that harvest is late and it is hard to get a good seed bed prepared in time for fall seeding, which is the usual practice. Fertilizer is not used, but farmers are

(Continued on Page 14)

"This is the darnd'st country for quick storms I ever saw!"

WE CAN'T AFFORD A MILK STRIKE!

Examine These Facts --- and You'll Agree

IRRESPONSIBLE PERSONS AND OTHERS NOT FULLY INFORMED ABOUT THE PRESENT MILK MARKETING SITUATION, ARE SUGGESTING ANOTHER MILK STRIKE. CONSIDER THE FACTS:

1 A MILK STRIKE MEANS SURE LOSSES -- NO GAINS

A—Milk strikes last about 10 days. If you are an average dairyman with a herd producing 300 lbs. of milk a day, withholding milk 10 days (or having it dumped) will cause a money loss of over \$60.00.

The most you can win is 6½ cents (the difference between \$2.08½ and \$2.15) for milk delivered in September. If you are an average dairyman and delivered 300 lbs. of milk a day for 30 days in September, you MIGHT get 6½ cents per hundred on 9,000 lbs. of milk or \$5.85. Where's the profit?

1—The strike settlement agreement set class prices for milk designed to bring a September return of \$2.15. The price was figured exactly according to the terms of the agreement but because production increased and consumption lagged, the price was \$2.08½ instead of \$2.15.

B—Add to this other losses such as:
Ruined trucks or burned barns.
Loss of time in making milk kept at home into butter.

C—Furthermore, a strike always calls out Sheriffs and special Deputy Sheriffs, the cost of which is added to your tax bill and to your neighbor's.

D—BUT THE ECONOMIC LOSSES OF A STRIKE ARE NOT THE WORST LOSSES.

Men were killed and injured in the August strike. It might happen to you or to someone you love. Almost as bad is the resulting bitterness and hatred between lifelong neighbors and old time friends. IS IT WORTH THE PRICE?

2 THIS is NO TIME to STRIKE

A—Because of the price increases in the amendment to the Milk Marketing Agreement, effective October 1, which dairymen voted for 98% strong, the October milk price to dairymen will be:

1—Well above the September price of \$2.08½.

2—Above the general price level for other commodities.

3—NEAR A LIVING PRICE FOR MILK.

B—The October price, backed by the authority of the Federal and State Governments and supported by the 75 milk marketing cooperatives that comprise the Metropolitan Cooperative Milk Producers Bargaining Agency, CAN BE ENFORCED. Anybody can SET a price. It requires authority to enforce it!

C—THE SAME AGREEMENT WHICH PROVIDES FOR THIS BETTER OCTOBER PRICE ALSO INSURES FAIR PRICES TO FARMERS FOR THEIR MILK UNTIL MAY 1. Also, on October 9, the delegate body of the Bargaining Agency voted to petition the Federal and State Governments to hold hearings not later than February 1, 1940, to consider amendments to the Agreements to increase prices to producers after May 1 when the present amendments expire.

D—THE RESULT IN DOLLARS.

It is estimated that during the next seven months the Amendment to the Marketing Agreement which went into effect October 1 will put close to \$10,000,000 into dairymen's pockets, as follows:

	Price Increase in Amendment Effective Oct. 1.	Estimated Lbs. of Milk affected.	Increased Revenue to Dairymen
Class I (fluid milk)	57c a hundred	1,402,697,301	\$7,995,374.00
Class II-A (cream)	35c a hundred	452,086,775	1,582,303.00
Class II-B & Class III-B	30c a hundred	320,000,000	325,000.00
TOTAL			\$9,902,677.00

3 Marketing Agreement BETTER than STRIKES

Dairymen in the 75 dairy marketing cooperatives that make up the Metropolitan Cooperative Milk Producers' Bargaining Agency are not opposed to a milk strike as a last resort, WHEN CONDUCTED IN AN ORDERLY MANNER. There may be times when it is necessary. BUT WE HAVE A BETTER AND MORE CONSTRUCTIVE APPROACH WITH THE STATE AND FEDERAL MILK MARKETING AGREEMENT.

That Agreement got us better results last winter than a strike possibly could, and is again doing it, in a cooperative, constructive, and orderly manner. This Milk Marketing Agreement has been approved by a very large majority of the New York milk shed dairymen. It has proved its worth. It was no fault of the Marketing Agreement that mistaken lower courts kicked it out.

HAD IT CONTINUED IN FULL FORCE MILK PRICES DURING THE SPRING WOULD HAVE BEEN GOOD, FARMERS WOULD NOT HAVE BEEN IN SUCH BAD FINANCIAL CONDITION WHEN THE DROUGHT CAME, AND THERE WOULD HAVE BEEN NO MILK STRIKE, FOR THERE WOULD HAVE BEEN NO OCCASION FOR ONE.

When the drought became serious, the Bargaining Agency petitioned the State and Federal Governments to provide higher prices.

PUBLISHED BY THE 75 COOPERATIVES THAT COMPRISE THE METROPOLITAN COOPERATIVE MILK PRODUCERS BARGAINING AGENCY, INC.

BEWARE

The same forces that helped to break down the Milk Marketing Agreement and caused its suspension on February 1, which action resulted in ruinous prices last spring are still at work. But in spite of them, we have got an orderly method of marketing milk and returning a fair price.

LET'S THINK BEFORE
WE UPSET IT!

WHAT TO DO

- 1 KEEP INFORMED -- Guard against radical propaganda. Search for facts. Send in coupon on this page for literature.
- 2 ATTEND MEETINGS -- If producers' meetings are called to discuss a strike, BE THERE and take your neighbors.
- 3 TALK AND VOTE AGAINST STRIKES AND RADICAL ACTION -- SMALL RADICAL MINORITIES CANNOT PREVAIL WHEN A CONSTRUCTIVE MAJORITY ASSERTS ITSELF!

Metropolitan Cooperative Milk Producers Bargaining Agency, Inc.,
Room 118, Onondaga Hotel, Syracuse, New York.

Dear Friends:

I will be glad to receive any free literature on the milk situation that you care to send and will support the work of the Bargaining Agency by passing it along to other dairymen.

The FARM NEWS

Hunters and Farmers Cooperate

FARMERS who have been troubled with the trespass problem during the hunting season will be interested in an experiment being tried out in Broome County, N. Y. A program for sportsman-farmer cooperation was laid out by a special committee appointed by Conservation Commissioner Osborne. An important point of the plan is that owners of 85,000 acres of the estimated 125,000 acres now posted against trespass will permit hunting on provision that the hunters first secure permission from owners and that they respect the owners' rights.

As his share of the cooperation, Commissioner Osborne has approved the appointment of forty special game protectors to serve throughout the season in Broome County. The following rules of conduct have been laid down for hunters:

1. Remember that although game is the property of the state it usually inhabits private lands. Pursuit of game upon private lands is a privilege and not a right.
2. Familiarize yourself with the Conservation Law and rules of the Conservation Department. Read particularly the warning printed on the back of your license.
3. Contact owners of property where you would like to hunt *before* hunting season opens so that you may strike up an acquaintance and secure permission for the privilege of hunting upon their properties.
4. Avoid shooting in the direction of, or in close proximity to a person, building, poultry and other domestic livestock.
5. Do not injure or destroy fences, trees, shrubs or other property. Tramping across newly seeded fields should be scrupulously avoided.
6. Control your dogs. Do not permit them to range near or around poultry and other livestock.
7. Avoid large hunting parties. Cooperate with farmers who are attempting to control overshooting of their farms.
8. Report violations of the Conservation Law. Cooperate with your regular and special game protectors.
9. Do not interfere with a farmer's hunting pleasures, especially on the opening day of the season. Do not overlook the fact that game has been supported largely from crops planted and raised by the farmer and that he should have priority in shooting.
10. Be courteous in relations with farmers. Offer them a share of your game take and purchase some of their products. Treat your farmer as you would expect to be treated if you owned the property. Hunters: yours is the responsibility for preserving free shooting in Broome County by observance of these simple rules.

New Schedule for Holstein Fees

The Holstein-Friesian Association of America, located at Brattleboro, Vermont, calls attention to a new schedule of registering transfer fees which will become effective January 1, 1940. Basic fees will be the same as at the present, but fees for older animals are increased according to the following table:

	MEMBERS	
	Females	Males
Under 6 mos.	\$1.00	\$2.00
6 to 12 mos.	1.50	2.50
12 to 18 mos.	2.00	3.00
18 to 24 mos.	2.50	3.50
Over 2 years	5.00	5.00
NON-MEMBERS		
Under 6 mos.	1.50	3.00
6 to 12 mos.	2.50	3.50
12 to 18 mos.	3.00	4.00
18 to 24 mos.	3.50	4.50
Over 2 years	6.00	6.00

Dairymen with purebred Holsteins are urged to bring registration of animals up to date before the first of the year. As an additional incentive to early registration, the fee on animals registered before they are 2 months old will be returned any time the bull

is under 15 months old, or 36 months in the case of a heifer, on surrender of the registration certificate to the Association.

Selling Cauliflower at Auction

The first carload of cauliflower from Suffolk County, Long Island, moved out about the middle of October. Acreage of cauliflower in Suffolk County is about 4,500, approximately the same as a year ago; but the total volume is expected to be heavier. The quality of the crop is good and sizes are somewhat larger than last year. Last year's crop was hit by the September hurricane which seriously reduced yields.

A large percentage of the Long Island cauliflower is moved over the auction block of the Long Island Cauliflower Association. At the auction shed there are two lines of trucks, one on each side, and the cauliflower is sold to the highest bidder.

This year marks the 25th anniversary of the auction method of sale, although the Association was formed back in 1901. H. R. Talmadge, Master Farmer and well-known Suffolk County farmer, is one of the original directors. Manager of the Association is Dwight Corwin. The auction guarantees all sales and charges 2c a package for its services.

Four-A Winner Gets Ph.D.

One of the first boys ever to receive an *American Agriculturist* Achievement Award was Clinton Stimson, who at that time was living on a farm at Spencer, New York. Clinton Stimson graduated from the College of Agriculture at Cornell, and then went to the Iowa State College of Agriculture, where he was research assistant in animal chemistry and nutrition and where in August, 1936, he received a degree of Master of Science. He then returned to Cornell, where he recently won his degree of Doctor of Philosophy.

It is always a sense of gratification to the entire editorial staff of *American Agriculturist* when the young people who win *American Agriculturist* Achievement Awards make good.

Four-H Winners

Each year a goodly number of 4-H Club members interested in forestry go to the Adirondacks on a forestry tour. Among the events usually scheduled are chopping and sawing contests. This year the chopping contest was won by Robert Teed of Schuyler County, who cut through a six-inch popple log in 16 seconds. Second place went to William Murray of St. Lawrence County, and third to Irving Plummer of Saratoga County.

In the sawing contest, first place went to the Schuyler County team of Robert Teed and Tracey Stiles, who sawed through an eleven-inch log in 28.2 seconds. Second place was taken by the Oneida County team made up of Wesley Carloss and David Anna.

In the tree identification contest, the following ten had the highest scores: Louise Mullen of Genesee County, 100 per cent; Robert Teed of Schuyler; Howard Griffin of Washington; Betty Schichtel of Erie; Mary Knowles of Schuyler; Wilfred Schichtel of Cattaraugus; Florence Wilkinson of Oswego; Carl Angus of Fulton; Elmer Sharp of Erie; and May Wilkinson of Oswego.

New York Boys Win Honors

Last week representatives of boys studying Vocational Agriculture in high schools met at Kansas City for the National Convention of the Future Farmers of America. Clayton Young of Randolph and Norman Drummond of Gouverneur represented New York State. There were 7,032 members in the New York State Future Farmers organization this year.

Five boys were honored by selection for the highest honor of the order known as the American Farmer Degree. The boys to win this honor are:

John Wilcox, Auburn; Ward Burdick, Central Square; George Beckwith, Ludlowville; Erton Sipler, Gouverneur; and Robert Watson, Edwards.

To be considered for this award boys must have completed at least three years of high school Vocational Agri-

culture, must have launched a successful farming enterprise, and must have been outstanding in school and community. Each boy must have earned at least \$500 in his high school agricultural project work and have that amount invested in permanent farming.

A. A. - Grange Bread Baking Contest News

POMONA bread contest reports have been pouring in so fast that it is hard work to keep up with them. Rensselaer is the first county to have the honor of having every Subordinate represented in its Pomona contest. Also noteworthy is Dutchess County's record — 23 Subordinate Granges there sent their champion bakers to the Pomona contest. Several other counties had every Subordinate but one entered in the Pomona match.

Mrs. Hazel A. Wigren, Chautauqua County's Pomona chairman, writes an interesting account of their contest:

"We had 15 entries in our Pomona contest," she says. "All of the loaves were

enjoy competing and have fun eating the good things at the meetings afterward. I have especially enjoyed the contest this year as my daughter Joyce learned to make bread for it.

"The prizes all came to me in good shape and we wish to thank the *American Agriculturist* for its efforts in getting them; also, the companies who so generously gave them."

And now here is a long list of Pomona and Subordinate winners:

HIGHEST MILK PRICES

IN YEARS JUST AHEAD...

IF!

Thanks to the Federal Milk Order, dairy farmers have a very good chance to get the best prices for their milk that they have known in years. It would seem that no farmer would knowingly give up this certain advantage.

But there is a big IF. If the order is not destroyed, good prices are ahead of us.

Who might destroy the order? Milk dealers are the chief ones who would like to see the order destroyed and the old conditions restored. Stooges who work in the milk dealers' interests would like to make their jobs successful by destroying the order.

Either we farmers are going to support this order and its certain better prices, or we are going to condemn it and defeat it.

When we farmers conform with the order and deliver milk in accordance with its terms, we are SUPPORTING the order. When we farmers refuse to deliver milk, we are CONDEMNING the order.

If withholding the milk is a vote of condemnation of the order, dealers are anxious to see that milk is withheld. For they would be the first to profit by the defeat of the order.

All we farmers should realize that when we work with the order we have the Government on our side. Furthermore, we are certain that the dealers will pay.

REMEMBER

The law definitely states that when 51 per cent of the farmers want the Federal order withdrawn, it must be withdrawn.

LET'S VOTE FOR HIGHER MILK PRICES

By conforming with the order and delivering milk in accordance with its terms — by refusing to withhold milk at this time — we have at least seven months of the highest milk prices we have known in years just ahead of us. Also, if the order is not defeated by its enemies, we are assured of reasonable prices during next summer.

So let's hold fast to what we have. Let's not play the milk dealer's game. Let's show a united farmer front in favor of the order and better milk prices. For this order is of great importance to every farm home and business man in this milk shed.

Better Prices Ahead—Supreme Court Refuses to Reconsider Decision—Amendments to Order Are Discussed

AS ANNOUNCED by Administrator Harmon, the uniform price for milk delivered during September will be \$2.08½. This price, of course, is subject to the usual differentials, including those for freight and butterfat tests. In view of the widely quoted figure of \$2.15 expected as a result of the strike agreement, some dissatisfaction has been expressed, and there have been rumors of another milk strike. In fact, Mayor LaGuardia with his alleged political ambitions has expressed his dissatisfaction in no uncertain terms, calling the announced price a violation of the strike agreement terms.

On the other hand, Joseph Eastlack, Chairman of the distributors group, countered with the statement that dealers have lived up to the agreement one hundred per cent, and that if the price is not as high as hoped, it is the fault of the estimators. Said he: "We never agreed that there would be any definite price and the Mayor's statement referred to it as an estimated price."

Commenting on the situation, Administrator Harmon said that 57 per cent of September milk was sold in fluid form, while 66 per cent of August milk was Class I. To this he attributed the failure of the price to reach the estimated \$2.15.

EDITOR'S NOTE: Payment for October milk, which farmers will receive on November 25, will include the increased prices obtained by the amendments to the Marketing Agreement.

You will recall that these increases were demanded by the Metropolitan Milk Producers' Bargaining Agency, hearings were held by the State and Federal Departments of Agriculture, after which the increases were granted and submitted to dairymen for final approval. Dairymen voted approval by a 98 per cent majority, and the increases became effective on October 1, not only for the month of October but for the entire winter up to May 1.

When dairymen receive their payments for October milk, they will realize that milk prices are well above the general price level, and therefore fair to good in relation to most other farm prices. Therefore, a milk strike, while perhaps necessary sometimes, would have little chance to bring about any better prices at present, and would, of course, be highly costly both in money and in bitter feelings between neighbors.

In the Federal-State Milk Marketing Agreement, dairymen now have, if they continue to support it, a plan not only for fixing reasonable milk prices but what is more important, for enforcing those prices. Anybody can fix a price, but it takes authority backed by good organization to enforce it.

Proposed Amendments to Order

The hearing on further amendments to the Milk Marketing Order held in Albany on October 10 developed few fireworks. About 300 attended the Albany meeting, while the next day in New York the crowd had dwindled to less than 100. A majority of producers who attended apparently felt that they should leave well enough alone and that any further amendments should be studied with great care to be certain that they were in the interests of dairymen rather than working to their detriment.

As one man characterized it, the suggested amendments could easily be divided into two groups—those proposed by dairymen and those proposed

by dealers. Representatives of the Producers Bargaining Agency made several suggestions as follows:

1. An amendment to meet the unpriced milk situation. The proposed amendment would require dealers to pay prices as provided by the Order for all milk received from farms approved for the New York City market regardless of whether the milk was marketed in the metropolitan area or in some other market.

2. An amendment proposing the elimination of the 30c premium allowed dealers for shipping fluid milk from manufacturing plants during November and December.

3. An amendment to limit hauling charges on milk moving between plants.

4. An amendment increasing the price of milk used in some lower classifications.

5. An amendment designed to prevent dealers from diverting milk for manufacturing purposes to points close to New York City.

The idea back of this is that milk close to market should be used for Class I and that milk a long distance from market should be used for manufacture.

Two amendments—one proposing a reduction of the payment to cooperatives for market service rendered and the other proposing lowering of diversion payments—were not supported with evidence at the hearing at Albany.

The hearing in New York City has continued longer than was expected. Probably it finished up last Saturday, October 21; but as we write this there is a possibility that it may be adjourned, to continue at some later date.

The amendments already mentioned on reducing the payments to cooperatives and market service differentials were brought up and discussed at the New York hearing.

The decision as to what amendments, if any, will be voted on by producers is up to Secretary of Agriculture Wallace and Commissioner of Agriculture Noyes. Amendments were proposed by interested parties. Evidence to back up the requests for amendments was submitted and this evidence must, in the opinion of the Secretary and Commissioner, be sufficient to justify the vote before amendments are submitted to producers.

Supreme Court Turns Down Appeal

Recently the Central New York Cooperative Association and the Jetter Dairy Co. appealed to the Supreme Court to reconsider its June 5 decision upholding the constitutionality of the Milk Marketing Orders. On October 9 the Supreme Court announced its refusal to reopen the case, thus marking the end of legal efforts over the constitutionality of the Orders. This will be welcome news to a vast majority of dairymen who were disappointed when lower courts ruled the Federal-State Marketing Order unconstitutional and who rejoiced when the Federal Court upset the ruling.

Looking Ahead to Summer

Delegates of the Producers Bargaining Agency meeting in Albany on October 9 laid out plans to bring up the matter of milk prices for the summer of 1940 not later than February 1. The

present schedule of prices as determined by the recent amendment to the Order will remain in effect until May 1. The Bargaining Agency voted to look into the matter with a view to petitioning for any changes in the price provisions of the Order which may seem warranted on February 1.

Milk producers in the Buffalo area, through the Niagara Frontier Bargaining Agency, have formally petitioned the State Department of Agriculture for an emergency price of \$3.00 per hundred for Class I milk. This action was taken October 5. Under the petition a Class I price of \$3.00 would continue until May 1. It is expected that a hearing will be called on the proposed amendment shortly. Other amendments requested were a 15c a hundred premium to producers of spec-

Subsidized Distribution of Milk and Other Products

By LELAND SPENCER

DAIRY FARMERS of the New York milk shed have reason for much satisfaction over the adoption of amendments to the Federal and State milk orders which bring substantial increases in price. But there is one feature of the amendments that has received practically no public attention.

Leland Spencer

I refer to provision that any milk which is purchased with government funds for distribution to low-income families, will be priced 57 cents per hundred-weight lower than the new Class 1 price. In other words, the regular price for Class 1 milk will be \$2.82 per hundredweight, but the price for milk that may be purchased for relief distribution will be only \$2.25 per hundredweight.

The fact that this special provision has received so little attention is no fault of the government officials who have had this matter in charge. In the announcement of the hearings that were to be held on the proposed amendment, the Department of Agriculture included a statement concerning a proposed plan of relief milk distribution for New York City. This statement was to the effect that a proposal was being considered for relief milk distribution through cooperation between the Federal and the New York City governments. It was asserted that the purpose was to make greater supplies of milk available to low-income families at a low price, and that payments would be made from federal funds to carry out a program similar to one that is being conducted in Boston.

The milk distribution programs mentioned in this announcement are part of a vast scheme of subsidized distribution carried on by the Government through the Federal Surplus Commodities Corporation. From time to time the activities of the F.S.C.C. have been discussed in the columns of the *American Agriculturist*, and it is my impres-

sion that these activities have been received very favorably by farmers in the Northeast. I doubt, however, whether many people have a clear understanding of what the Government is trying to do through the F.S.C.C. or why it is being done. Therefore, I am going to discuss some of the general features of the F.S.C.C. programs, as well as the milk distribution program that has been carried on in the Boston market during the past two years.

As I understand it, the theory behind the F.S.C.C. program is about as follows: Large numbers of consumers, due to unemployment, are unable to buy the normal quantities of farm products, even with such aid as they receive through home relief, W.P.A., etc. This lack of purchasing power results in farmers being unable to sell the entire output of many crops at "living prices." By purchasing quantities of such products that are particularly low in price, and putting them in the hands of low-income families free, or at nominal prices, the Government can minimize the difficulties of both farmers and consumers, and perhaps can bring about a solution of the problem. The cost of this government activity must, of course, be paid by the taxpayers either now or later.

The plan has been carried out in different ways. Until recently the procedure was for the F.S.C.C. to buy quantities of various products that were particularly low in price, and to turn these over to State or local relief agencies for free distribution to needy families through commissaries. The families on relief or on W.P.A. rolls received such products in addition to their regular cash allowances.

Beginning several months ago, the F.S.C.C. began to try out the "stamp plan," whereby families on the home relief or on W.P.A. rolls are given an opportunity to get without cost, at their local stores, quantities of "surplus" products equal in value to one-half the amount they are allowed for regular purchases of food. The main purpose and effect of the stamp plan is to route the distribution of surplus commodities through regular channels, such as wholesale houses and grocery stores, instead of through F.S.C.C.

(Continued on opposite page)

(Continued from opposite page)

agencies and commissaries. So far the stamp plan has been introduced only in Rochester and a few cities in other parts of the country, but it is being extended gradually to other places.

The stamp plan has not yet been used in connection with the distribution of milk. The first subsidized milk program was begun by the F.S.C.C. in Boston in October 1937. There the F.S.C.C. bought around 25,000 quarts of milk a day at the price fixed in the Federal Marketing Order for Class 1 milk delivered at Boston. Local relief agencies paid for the pasteurizing and bottling and delivery to commissaries and to schools. At first the milk was distributed only to families on relief. Later it was arranged for families on W.P.A. rolls to get this milk by paying 2 cents a quart to cover the cost of bottling and delivery. The volume was increased to a peak of 125,000 quarts a day last December. This was about 17 per cent of the total consumption of milk in the Boston market. Early in 1939 the quantities allowed to the larger families were reduced, and the total distribution of relief milk was cut back to 80,000 quarts a day.

About two months ago the Department of Agriculture announced a new plan for subsidized milk distribution in Boston. This provides that relief families will pay 5 cents a quart, and W.P.A. families 7 cents. The F.S.C.C. puts in enough to bring the dealer's cost of milk down to 5 cents a quart. The present price under the Federal Order for the Boston market is equivalent to 6.7 cents a quart, so the Government adds 1.7 cents to the 5 cents that is paid by the customer. Local relief agencies pay the dealers for processing and delivering the milk to the depot, but in the case of milk that goes to W.P.A. families, this cost is repaid by the extra 2 cents that is charged.

Under this new plan, fewer families will get the subsidized milk, since they have to pay something for it. However, the volume will not be cut down in proportion, because more milk is allowed per family.

The proposed plan of subsidized milk distribution for the New York market is similar to this. In an early issue we shall consider the merits of such arrangements from the standpoint of their benefit to farmers.

October Apple Estimate Down Two Million Bushels

The October 1 crop report lopped over two million bushels off the expected U. S. commercial apple crop. The October 1 figure was 100,998,000 bushels, compared to previous estimate of 103,260,000. Last year's commercial crop was 82,395,000 bushels. The decrease of a little over two million bushels is scattered over most of the important producing areas.

The cut in New York State was 400,000 bushels, putting expected crop at 14,500,000 and promising a crop considerably higher than last year when the commercial crop was 10,464,000 bushels.

There was little change in New England prospects, while the New Jersey crop showed a slight improvement over the September figure, last estimate putting the crop at 2,019,000 bushels, just about the same as was harvested a year ago. The Pennsylvania crop is expected to be 6,000,000 bushels, as compared to 3,800,000 last year. The estimate for West Virginia is 4,000,000 bushels, compared to 3,227,000 a year ago. For Virginia 7,700,000 bushels, compared to 7,268,000 last year. In the West, Washington is credited with a crop of 20,000,000, which is about 9 per cent less than last year. Oregon expects 2,300,000 bushels, 317,000 below last year's crop. Other estimates are: Idaho, 2,020,000, compared to 2,451,000 last year; and Colorado, 1,150,000, compared to 1,746,000 last year.

The government is now buying ap-

ples in several sections, including New York, New England and New Jersey. It is hoped that this action will stabilize the market to some extent. There are still plenty of problems for apple growers in marketing this year's crop. Export demand is expected to be considerably lower, the crop is heavy, and prices have been running below last year. Western New York growers are taking active steps to improve their markets. For details see page 2.

October Crop Report

POTATOES—As was expected, the October crop report made a considerable reduction in the Maine potato crop, October 1 crop estimate being 40,800,000 bushels, as compared to the September 1 estimate of 47,600,000 bushels and the August 1 estimate of 49,300,000.

For the entire country the October 1 estimate indicated 358,689,000 bushels, compared to last year's crop of 371,617,000 bushels and a ten-year average of 372,258,000 bushels. Most of the decrease in the crop as compared

vent the vines from being heaved out. Also, the plantations are flooded during the harvesting time when there is danger of a heavy frost or a freezing.

How Cranberries are Picked

After visiting several bogs where the berries had already been harvested, we came at length upon a gang of men, probably fifty in number, down on their knees harvesting berries, as illustrated in the picture on page one. The berries are harvested with a tool called a scoop, which is a hollow wooden shell with curved teeth at the bottom and a handle at the top. The scooper pushes it through the vines and tips it back so that the berries roll between the teeth into the hollow shell-like back. They dump the scoop in bushel boxes behind them, which in turn are trucked to plants, where the berries are screened, scrupulously cleaned, cooked into cranberry sauce, and canned under Cranberry Canners' brand names of Ocean Spray, Bog Sweets and Makepeace.

The harvesters lose about 12 to 15 per cent of the berries on the ground, so after they are through the water is let in upon the plantation, the berries float to the top, and the wind blows them over to one side, where they are scooped out and taken to the canneries.

Interesting as operations are, however, I am always more interested in the men who do the operating, and in the effect of any business upon the people themselves. The story of what cranberries have done for the farm folks of Cape Cod is amazing. In the early days cranberries grew wild, and the early settlers used to pick them as they did other wild berries. But the berries were small, sour, and poor in quality. So, long about 1815, Henry Hall began experimenting with cultivated cranberries. He found that they grew larger and better, and from this small beginning there grew Cape Cod's largest and about its only farm business. But, like in every other farm business, the farmers found that they could grow the berries better than they could sell them.

A Yankee and a Cooperative

Up in Boston, some twenty years ago, there was a young Yankee from Maine, Urann by name, who had come down to Yankeetown to practice law. He was a successful lawyer, but he didn't like it too well, because he wanted to be out of doors. Becoming interested in the cranberry business on Cape Cod, he realized that the cranberry growers were then up against the problem facing apple growers and the rest of the farmers all over the country—they could grow the stuff

to last year is in early and intermediate states. The October 1 estimate for 18 surplus late states was 257,518,000 bushels, as compared to last year's crop of 257,614,000.

New York State crop on October 1 was estimated at 23,826,000 bushels compared to 26,840,000 last year. Yields in upstate muck areas are better than expected. The same condition prevailed in Long Island, although yields there were far below last year.

BEANS—In the World War, bean prices responded quickly and rapidly, and it appears that the same situation is happening again. According to October 1 conditions, U. S. crop is 11 per cent below last year's crop but 7 per cent above the ten-year average. The U. S. estimate is for 13,575,000 100-lb. bags, compared to 15,268,000 last year and a ten-year average of 12,638,000. The New York State crop is indicated at 1,131,000 bags, compared to 1,449,000 last year and a ten-year average of 979,000.

CABBAGE—The October crop report for cabbage was considerably below

the September 1 estimate, especially in New York, Ohio, Pennsylvania and Wisconsin. U. S. estimate for Domestic cabbage was 248,300 tons, compared to 511,500 tons last year. New York State estimate was 48,900 tons, compared to 147,300 last year.

U. S. estimate for Danish cabbage was 208,500 tons, compared to 370,300 a year ago. New York estimate was 104,100 tons, compared to 219,400 last year.

ONIONS—The New York onion crop is of good size and good quality. For the state the estimate is 4,092,000 sacks, compared to 2,961,000 sacks a year ago. For the entire country the estimated onion crop is 13,451,000 100-lb. sacks, compared to 11,157,000 a year ago and a ten-year average of 9,914,000.

CABBAGE FOR SAUERKRAUT—The U. S. October estimate of cabbage grown for sauerkraut was 105,200 tons, compared to 195,400 tons last year and a 1928-1937 average of 153,800. New York State estimate this year was 28,500 tons compared to 80,100 last year and an average of 57,700.

A Visit to the Land of COD and CRANBERRIES

(Continued from Page 1)

well, but they could not sell it. To make a long story short, this young lawyer set up an organization to sell cranberries. The company, at first known as the Ocean Spray Preserving Company, developed into Cranberry Canners, Inc., a grower-owned cooperative, and one of the most efficient farmers' organizations. Cranberry Canners consists of nearly 500 cranberry growers, who produce 80 per cent of the world's crop. It now owns three canning plants, located in the heart of the cranberry growing area, so no time is lost in getting vine-ripened berries off the vines and into the cans. Cranberry Canners also owns two freezing plants, where berries not needed for immediate canning are frozen and held at low temperatures until needed.

This cooperative has from the beginning used two or three fundamental business principles that every farmer cooperative might well take to heart:

1. It markets only a high quality product.
2. It cans and holds the surplus off the market until it can absorb the crop without ruining the price.
3. It spent over a million dollars in advertising to build a market to a point where now seven years out of ten the demand for cranberries and cranberry products exceeds the supply.

Under the leadership of this great cooperative, the cranberry plantations have been constantly improved, and the price to growers doubled. The industry is worth from five to seven million dollars annually to New England, employs about 5,000 people a year, and is the only real industry on Cape Cod.

Cranberries for Health

Walking through the processing factories with Mr. Urann, I was struck with the cleanliness with which the products are handled, and with the efficiency of operations which puts the product on the market at the lowest possible cost. Cranberries have become far more than a holiday food. Their brilliant color and generally attractive appearance have always made them a fine decoration for Thanksgiving and Christmas feasts, but this cooperative has made it possible for the housewife to have cranberries on the table the year round. Formerly, the berries were only sold fresh, and could therefore be shipped only in season. But Cranberry Canners, Inc., started the canning process, which aided the growers by taking care of the surplus, and the consumer by furnishing a helpful year-round food, rich in vitamins and other health-giving properties. In addition to cranberry sauce, a helpful and invigor-

ating drink called Cranberry Cocktail, and other products are made from the berries.

Ideals Determine Success

The philosophy or the ideals back of any business determine its real success. In riding through the beautiful Cape Cod countryside for two days with my friend, Mr. Urann, listening to his enthusiastic discussions of the cranberry business, I had ample opportunity to note why his cooperative had been able to be of such tremendous service not only to its members but to every one in that whole section where cranberries are grown. When we went into one of the company's factories, or out on a bog where the men were working, I noticed the friendly hello, the personal greeting, the cheery word, of the President of the company to the employee, and I noted in turn how the faces of the workmen lighted up when they returned the greeting.

"There was a time," said Mr. Urann to me, "when the company was young, that I knew every grower and every employee by his first name. I knew about all of the marriages, and when the babies came. It is my regret that the growth of the business has chained me more to the desk and deprived me of some of these personal contacts."

At another time he said:

"Before the teacher or the preacher can do a thing, you must first fill a man's belly." And then he went on to say how much even 50 cents more per barrel for cranberries meant to some of the poorer growers. He told of a woman, wife of one of the growers, who said that she had gone without a needed operation for three years, but finally was able to achieve it because the cooperative had brought better prices for her and her husband's cranberries. He told of the boys and girls whose high school and college education had been made possible by the increased price of cranberries that had come through better sales from good organization.

Yes, the real success of either an individual, an institution, an organization, or even a nation, is measured by its ideals, the kind and height of the stars toward which it is shooting. The ideal of the farmers, united in the cooperative organization, Cranberry Canners, Inc., is to build and maintain a business that will give every member who does his part a fair share of the proceeds of cooperation, and enable him to maintain a standard of life that will make for happiness in his family and a successful community. Cranberry Canners has gone a long way in achieving that ideal for Cape Cod!

NORTHEASTERN *Slants* ON THE *National* NEWS

■ U. S. Will Observe Armistice Day

PROCLAIMING November 11 as Armistice Day, President Roosevelt asks all Americans to think back to November 1918 when "the voices of war were silenced" and to look forward even now to a time "when a just and enduring peace shall be established among all the peoples of the earth." Armistice Day became a legal holiday last year by Act of Congress which provides that "the 11th day of November in each year, a day to be dedicated to the cause of world peace and to be hereafter celebrated and known as Armistice Day, is hereby made a legal holiday."

By the time Armistice Day comes around, it is expected that Congress will have said everything it has to say on subject of how best to keep this nation out of Europe's war and will have agreed on neutrality legislation. Prospects now are for passage of a compromise bill which would repeal arms embargo, but would put sales to warring countries on a strictly cash-and-carry basis (instead of allowing 90-day credits as was proposed by Administration). Also, it is expected that bill in final form will not forbid travel of American ships to non-European ports of belligerents, such as British Hong Kong, which are far removed from the fight. Studies have shown that complete cash-and-carry, extended to non-European ports, might ruin American shipping and many regard this as an unnecessary sacrifice of our merchant fleet. "Steer clear of Europe and of the Atlantic, but hang on to our foreign trade elsewhere," may be the final decision.

SLANT: Armistice Day is an appropriate time for every citizen highly to resolve that America will stay out of the European war.

One of the persons who is helping to get us into war is he who is constantly saying: "I hope we can stay out of the war, but I am afraid we can't." We can and we must!

■ Taber Points to World War Lessons

"NO FARMER wants prosperity at the price of human lives sacrificed on a battlefield," declared National Grange Master Taber in a talk given in Syracuse, N. Y., recently. But, he added, farmers do want higher prices and have them coming to them after ten years of low ones.

"War means disruption and disaster," said Taber, "and the American farmer is determined that this country must be kept out of war. He has not forgotten the lessons of the last world war, and that for every dollar he got out of it, he paid twice over. We plowed up the grass that had been growing on the prairies for centuries and made the dust bowl in order to raise enough wheat to win the war. What must we do now? I'd say to every farmer in the nation, 'Continue your normal farm production; increase slightly, but there must be no expansion in agriculture.'"

"I believe in peace, but I am no pacifist. I'd like to see America have the strongest navy and air force in the

world, so that no nation would look with envy on this country. But our final defense is the small efficient industry, the home owners, and the farmers. We must build character and citizenship. We must take the blessings we enjoy under the flag seriously. We can do more for this country on the farmlands of America than on the battlefields of Europe."

■ Commodity Credit Corporation Cuts Interest Rates

ON NOVEMBER 1, interest rates to farmers on Commodity Credit Corporation loans on surpluses of butter, wheat, corn, cotton, naval stores and a few other farm products will drop from 4 to 3 per cent, saving farmers about 4½ million dollars on half a billion dollars worth of loans now outstanding. The cut in interest rates, according to Secretary Wallace, came about through a conference between Commodity Credit Corporation officials and representatives of American Bankers' Association.

Idea back of Commodity Credit Corporation loans is to provide cash for farmers, enabling them to hold products off market. Chief criticism of program has been tendency of government to make loans at higher than market value of crops in attempt to raise price level of farm products. Result, in some cases, is that government becomes owner of the crops on which it loans money. Idea of loans has had general approval, with proviso that loans should be slightly below market value. Recent sharp increases in farm prices have lessened amount by which government is "in the hole" on these loans. **SLANT:** Government losses on these loans must some time be paid by taxpayers, including farmers.

■ Dairymen Fight Argentine Trade Pact

WHILE NOT fundamentally opposed to the idea of trade treaties, U. S. farm organizations are generally dissatisfied with many provisions of trade pacts with other countries. Feeling is freely expressed that too many and too large concessions have been made on imports which will compete directly with American farm products. On the other hand, Administration salesmen have attempted to justify pacts by claiming that increased foreign exports of manufactured products would hasten prosperity and benefit farmers through increased buying power of cities.

Latest proposal to draw farm organization fire is Argentine trade pact, and chief among gunners aiming at it is National Cooperative Milk Producers Federation. For example, Charles Holman, Secretary, points out that lowering tariff duty on casein from Argentina is uncalled for and unsound because U. S. dairy farmers produce annually 53,000,000,000 pounds of skim milk—enough to manufacture more than twenty times the amount of casein used in this country. Also says Mr. Holman: "Manufacture of some types of cheese has expanded in this country, and that manufacture will be hard hit, if not made impossible, should

tariff on cheese from Argentine be reduced."

Dairymen also have interest in lowered tariff on canned meats, as considerable proportion of cattle and calves slaughtered in this country come from dairy herds.

■ Shorter Hours and Higher Pay

ON OCTOBER 24, about 250,000 persons holding jobs in interstate industries had their pay automatically stepped up from 25c to 30c an hour, and 400,000 had their hours cut from 44 to 42 per week. Change came as Federal wage-hour Act enacted last year, took another step toward its eventual goal of a minimum of \$16 for a 40-hour week.

Twelve industries most affected by wage-hour changes are cottonseed oil, fertilizers, sawmills, millwork, furniture, cotton textiles, silk and rayon, knit goods, men's clothing, women's clothing, shirts and collars, boots and shoes. Survey made last April by Bureau of Labor Statistics shows that 75 per cent of all employees receiving less than 30 cents an hour are employed by these industries.

SLANT: Congress intended shorter work week to create more jobs, but it may mean greater replacement of men by machines where companies cannot afford the increased labor costs.

■ Western N. Y. Farmers Keep "Posted"

WITH THE opening of the pheasant season this month, Western New York farmers posted their lands against invading hunters, but they let it be known that hunters would be allowed on their land if they did the right thing. Result is that one Game Protector up that way is giving this good advice to hunters:

"Drive into the farmer's yard and leave your car. Make the farmer's home your base of operations. You will get permission if you show that you are reasonably responsible. Learn where you may hunt, for he may have men working in the fields. If you find a good hunting spot on his grounds, let the farmer know about it. Then, too, show him what you have caught at the end of the day."

Charles Bowerman, a farmer near Lockport, N. Y., expressed the attitude of farmers in general toward this problem of protecting their lands from irresponsible hunters: "We have to post in self-protection. You can't trust every Tom, Dick, and Harry on the place, for there are some hunters who are only too willing to shoot your chickens or snip your fences."

SLANT: If hunters would show as much regard for a farmer's land and property as they do for their own, they would find farmers cooperative.

■ Way to Prosperity

SPEAKING to American Institute of Cooperation in Chicago recently, President Fred Sexauer of Dairymen's League Cooperative Association, deplored present program of "regulation, regimentation and government opera-

tion upon which we have embarked." This program, said Mr. Sexauer, will never stop unless there is a return to a consideration of our fundamental problem of raising and maintaining basic commodities price levels.

"Prosperity, balanced budgets, prosperous agriculture and full employment can be had in United States by lifting price level of basic commodities through control of currency," said Mr. Sexauer. He pointed to effectiveness of such action in this country between April 1933 and February 1934, and in British Empire, Argentina, Brazil, Sweden and Denmark.

■ War Goes On

CHANCES for any kind of a peace now between Allies and Germany appear to be next to nothing since Britain and France turned down Hitler's "peace on my terms" offer. First German air raid on Scottish coast on Oct. 17 signalled beginning of new phase of war. Same day Germans launched a long-awaited attack against French positions on Western front, driving French out of German territory at one point, and gaining a foothold on French soil for first time since war began. French claimed they purposely retreated from territory they had mined.

Most severe blow struck at British Navy during fortnight was sinking of British battleship Royal Oak by German submarine. British hit back with announcement that they had sunk three German submarines in a single day. Both Britain and Germany are trying to cut off each other's sea routes of supplies, and so far Britain seems to have the edge, having succeeded in capturing 300,000 tons of materials bound for Germany since war began.

While things are getting under way on Western front, Russia continues to make hay at expense of Baltic States. Small neighbors of Russia already obliged to grant her military and naval rights in their countries are Estonia, Latvia, and Lithuania. Russia's attempts to make Finland follow suit have not succeeded as yet. With Russian troops reported massing near her border, Finland mobilized her fleet, called up 300,000 troops, moved her civilians out of cities, and held black-out rehearsals. United States, which has a warm spot in its heart for Finland because it has been regular in making payments on its debt to us, put in a good word for Finland in the form of a personal note from President Roosevelt to Soviet President Kalinin. Note expressed hope that nothing would occur to hurt peaceful relations between Russia and Finland.

As we go to press, Turkey—which also has been in for some bullying by Russia—has turned down Soviet demands and signed a fifteen year mutual assistance pact with France and Britain. Treaty provides that these three powers will aid one another in case of aggression leading to war, either in Balkans or in Eastern Mediterranean. One clause in agreement, however, permits Turkey to remain neutral if Russia is involved. Treaty is considered a blow to Germany and an important diplomatic triumph for the Allies.

■ "Pilot Plants"

NOT A NEW kind of plant, but instead a sort of test-tube factory where new industrial uses of farm products can be studied, are the "Pilot plants" which will form an important part of the four regional laboratories now being built by government. Ithaca, N. Y., is the site of the one for the Northeast. These pilot plants, says Dr. W. W. Skinner, associate chief of

Bureau of Agricultural Chemistry and Engineering, will do for industry very much the same kind of work that demonstration farms have done for farmers—supply practical evidence of the value of new methods and processes.

Manufacturers want proof, points out Dr. Skinner, that this or that new process will work on a large scale before they invest money in it. They want to know what the quality of the product will be, what raw materials and transportation costs will be, the expense for labor, and the price at which the product will have to sell to find a quality market. Answers to all of these questions are found in the pilot plant, says Dr. Skinner, and he gives as one example of successful pilot plant guidance the making of starch from sweet potatoes. Pilot plant tests of process led to operation of a cooperative plant that this year will handle the product of 4,000 acres.

SLANT: Here is a way in which government is rendering a splendid service to agriculture. Discovery and practical application of new industrial uses for farm products will do more to help farmers in a permanent way than all the crop control programs and benefit payments in the world.

Apples for the Jobless

"AN APPLE A DAY" is in prospect for members of families on relief, as result of decision of Federal Surplus Commodities Corporation to help apple growers move their surplus. Growers had asked that apples be purchased by government under plan similar to that in effect during past two years. Under a new provision of the plan, however, growers must divert one bushel of apples from the fresh fruit market for every bushel sold to FSCC.

Minimum grade to be bought by FSCC for relief families is Combination U. S. No. 1 and U. S. Utility or an equivalent state grade. Produce must be sold in carlots—528 bushel baskets or 525 bushel boxes—but it is said that several producers may combine to fill a car, if one person handles the transaction for the group. Various varieties may be mixed in a single carlot, but containers have to be uniform—that is, all baskets or all boxes. Apples must be firm, according to Federal specifications.

Apples that are to be diverted from the fresh fruit market, under the purchase plan, may be of any size or variety, provided they are marketable. They may be sold for cider or juice, to canning factories, fed to livestock, ground into silage, dumped, or left on the trees.

New Autos on Show

ON OCT. 15, auto shows in New York and throughout the country gave the public a chance to see what's new in cars. Lower prices were announced for seven of the first ten passenger makes.

The publication, *United States News*, comparing the "powerful, streamlined model of today with the coughing horseless carriage of a generation ago," points out that in 1920 the average sedan sold for \$2,877 and had a motor which generated 43 horsepower, while this year the average car sold for \$795 and its motor produced 85 horsepower.

Besides getting the price down and the horsepower up, the years have brought these improvements: Dependable, powerful motors, all-steel frames, effortless steering, safety glass, heating systems, longer-lived tires, four-wheel brakes, safety-beam headlights, direction signals for turning corners,

tops on convertible models which are easy to raise and lower, increased body size, comfortable springs, steering wheel gearshifts, not to mention such luxurious accessories as the radio which keeps the driver in touch with the news as he rolls along.

"Safety First" Program

Along with its constant efforts to give the public better and cheaper cars, the automobile industry, through the Automotive Safety Foundation, has for the past four years contributed more than \$400,000 annually in support of a highway safety program, endorsed by 27 national organizations. Although auto accidents seem to be on the increase, statistics show steady decrease in rate since program was launched. At the end of 1936, traffic fatality rate was 16.4 per hundred million vehicle miles; at end of 1937, it was 15.8; for 1938, it was 12.9; and there has been a further decrease this year.

"Safest State" last year was New Jersey, which won Seventh National Traffic Safety Contest. Providence, R. I., was named safest city in United States.

625,000 Barrels of Cranberries

THE 1939 CROP of the festive red berry, without which no respectable Thanksgiving or Christmas turkey would be seen on the table, will total around 625,000 barrels, according to American Cranberry Exchange of New York City. This figure is 25 per cent bigger than last year's crop, but hits the five-year average. As usual, Cape Cod, Massachusetts, will supply largest part of the berries. Wisconsin, second cranberry-growing state in the country, will account for 100,000 barrels. New Jersey, where crop was injured by violent coast storm late in August, will contribute 80,000 barrels. Rest will come from Washington and Oregon.

SLANT: For first-hand account of this interesting farm crop, read front page article in this issue, entitled "A Visit to the Land of Cod and Cranberries."

Good Books to Read

TE-A-O-GA, Annals of a Valley, Elsie Murray. Those interested in local history—and who isn't—will like a little book just published by Elsie Murray, Director of The Tioga Point Museum. The attractive booklet is illustrated with portraits, maps, local scenes and markers, gives a short account of old Athens Township, covering the early Indian, Revolutionary and Pioneer periods. Mail orders to Tioga Point Museum, Athens, Pennsylvania. Price 53 cents.

Good Movies to See

JAMAICA INN. Adapted from Daphne du Maurier's novel, Jamaica Inn is fine material for melodrama, and for the acting of Charles Laughton, who stars in the picture. Early in the 19th century, the coast of Cornwall, England, was infested by gangs of wreckers who lured ships to destruction. The story is written around the legend of one of these gangs, and the adventures of a young girl who thought she was going to have a quiet visit with her aunt, the wife of the proprietor of Jamaica Inn.

FOUR FEATHERS. What the winning of the West is to United States history, the spread of England's colonial empire is to hers. Four Feathers pictures events leading up to the Battle of Omdurman, in which, in 1898, British troops, led by Kitchener, defeated the tribesmen and re-established British influence in the Sudan. Filmed in technicolor.

Winners in Third Month of the "White Pine Contest"

THE THIRD month of the Weyerhaeuser Genuine White Pine Contest ended with Earl T. Mast of Sidney, Ohio, in the big money. Mr. Mast was paid at the rate of \$48.10 per word for completing the sentence, "What I like best about Genuine White Pine is —." Here is what he wrote:

WHAT I LIKE BEST ABOUT GENUINE WHITE PINE IS —

Its three "Abilities" — Durability, workability, and adaptability. Durability to stand the test of time and the elements — Strength sufficient for any construction job. Easy to work with and fit, because exceptionally straight, free from cross grain, warping, checks and splits. Adaptable from the finest satin smooth interior finish, to the most rugged outdoor exposure.

EARL T. MAST.

The other six winners in the third monthly contest are as follows:

Second prize, \$100.00—Russell C. Reed, 270 Graham Road, Cuyahoga Falls, Summit County, Ohio.

Third prize, \$50.00—Mr. D. H. Overmyer, 420 Croghan St., Fremont, Sandusky County, Ohio.

Fourth, Fifth, Sixth and Seventh prize, \$25.00 each—Henry K. Reynolds, Wallace, Steuben County, New York; Mrs. John P. Mitchell, Rochester Mills, Indiana County, Pennsylvania; Claude J. Sheffer, RFD 1, Dover, York County, Pennsylvania; Mrs. Glenn D. Yowler, Chalk Hill, Fayette County, Pennsylvania.

* * *

Following an editorial in a recent issue of *American Agriculturist* discussing the great problem of too much lifting which farmers have to do, we received a very interesting booklet from the HENRY LOHSE COMPANY, INC., of 223-233 Raymond Boulevard, Newark, New Jersey, describing a tailboard lift attachment which would be especially suited for use on the farm where it is necessary to handle many heavy loads.

A booklet or circular describing this practical aid in making heads save backs can be had free of charge by writing to the Lohse Company.

* * *

Butchering time is just around the corner. Unquestionably, a smaller percentage of farmers know the ins and outs of butchering than was the case fifty years ago. Besides that, a number of

new wrinkles have been discovered that will help to improve the quality of the product.

Two booklets are available that give detailed directions and recipes. One is "The Farmer's Salt Book." All you have to do to get a copy is to write to the INTERNATIONAL SALT CO., Dept. AA, Scranton, Pa. The other is "Home Meat Curing Made Easy." It is profusely illustrated and contains 128 pages. Because of its size, a charge is made. You can get it by sending your request with 25c to the MORTON SALT CO., 208 W. Washington St., Chicago, Ill.

* * *

Grandmother was a master craftsman when it came to designing and making artistic quilts from odds and ends. In recent years the younger generation has grown to appreciate patchwork quilts and show a desire to imitate as best they can the masterpieces of colonial days. But where can they get patterns and directions? To meet this need, the LOCKPORT COTTON BATTING CO. have published the Lockport Pattern Quilting Book containing information, suggestions and patterns. This is available to any subscriber of *American Agriculturist*. Just send your request and 10c to LOCKPORT COTTON BATTING CO., Dept. D-3, Lockport, New York.

* * *

Advertising does not increase the cost of things you buy—it makes them cheaper. There are two main reasons for this. First, advertising allows the economies which come from mass production. Perhaps there is no better example of this than automobiles. You can well remember the time when a poor automobile (judged on the present day standards) cost about \$2,000. Mass production, plus advertising, allows you to buy a far better car today at less than half that price.

The second reason why advertising cuts cost is that it lessens sales costs.

A company making nationally advertised sheets that retail for \$1.75 spends 1c of that amount for advertising. Other examples of advertising costs are: .003 for each 15c package of a well-known breakfast food; .00036 for a 12c can of soup; 1/5 of a cent to advertise a well-known soap costing 7c a cake.

An indirect benefit from advertising is that a concern that spends considerable sums for advertising must put out a product that will stand the test of public opinion. Otherwise they are merely throwing their money away.

A "talking hen" was the novel method used by the National Oil Products Co. of Harrison, N. J., to introduce its story at the Seventh World's Poultry Congress held in Cleveland, O. The New Jersey company, through its farm feed division, had an exhibit at the Hall of Industry telling the story of Vitamin A and D oils for poultry and animal feeding. The "talking hen", a mechanical reproduction operated by a sound track, gave visitors at the NOPCO booth information about methods of improving egg and poultry quality.

Les Brown and Ray Ewing, manager and sales manager respectively, of NOPCO's agricultural department, expressed their belief that the outstanding educational work done at the show through both scientific meetings and commercial exhibits would be of immediate benefit to the poultryman in raising better flocks and to the feed manufacturer in selling more well-balanced, carefully checked, poultry feeds.

Talking Turkey

George Jeffreys Suggests
Better Birds and Orderly Marketing

By H. L. COSLINE

FEW MEN in the Northeast have given more study to turkey problems than has George Jeffreys of Calcium, Jefferson County, N. Y. He began raising turkeys in 1926, and some years has as many as 3,000. His primary interest is in breeding better turkeys and in selling birds to breeders rather than for meat purposes. Said Mr. Jeffreys:

"I am trying to develop an ideal meat type of bird—one where you can get more slices of breast meat. I have also been interested in developing a non-setting strain, and a strain that will lay heavily in the spring when eggs are needed for hatching.

"Some years ago I put a good deal of study on the correct proportion of the ideal turkey. I measured a good many turkeys with calipers. I concluded that the keel bone should be the basis of my figures, and that the turkey's leg from elbow to pad should not be longer than his keel. I have also worked out what I think is the correct relationship between the depth of the bird and the keel and between the width and the keel."

"What are some of the problems that turkey growers need to study?" I asked.

"An important one," Mr. Jeffreys replied, "is to convince the public that turkeys should be eaten the year around rather than just during holidays. Growers can help this trend which has already started by having birds mature at different times of the year. I also feel that quick freezing and better packaging will tend to increase consumption. In fact, northeastern growers must wake up to the changes brought by quick freezing or western growers are going to get this market. It may be that turkey raisers must get into the business in a big enough way to have their own killing, dressing and freezing plants and use their own trade marks. This quick freezing is different than cold storage, and will make it possible to offer to the public high quality birds the year around.

"Other problems are to develop a better meat type of turkey and to work out some system of orderly marketing."

"How many turkeys does a man have to have to make it his only business?" I asked.

"He should have at least 2,000 to sell each year, but by all means he shouldn't raise that number the first year he goes into the business. The ideal way is to have another source of income and to start out with about 150 or 200 birds, and then increase the business gradually until the man gains experience.

"There is a new disease, or rather parasite, that is bothering turkeys. It is called Hexamite, and is a parasite which develops in the intestines just above the ceca. It is highly fatal to young turkeys three weeks of age. I have a theory that this parasite is spread by flies and that we are going to find it necessary to make our sun porches fly-proof.

"There is one other important point in raising turkeys. I do not believe that a turkey grower can afford to experiment with feed. The best thing to do is to pick a feed manufacturer who has done some experimental work on turkey rations and to use that ra-

George Jeffreys with one of his White Holland turkeys.

tion strictly in accordance with the manufacturer's directions."

The raising of turkeys in the Northeast has increased rapidly during recent years. Probably the most important factor in this increase is newer knowledge of disease control with turkeys. What the future will bring is anybody's guess, but it goes without saying that men like Mr. Jeffreys, who are continually studying ways of making turkeys more profitable, perform a distinct service for all turkey breeders.

Roaming Western Roads

(Continued from Page 6)

beginning to think about it all over the west.

These dune-like hills, with yellow and brown and occasional green blocks, spread under a blazing sun make a picture that fascinates. Nature seems fierce and unrelenting, yet generous.

There is little lodging of grain in the wheat fields. When the temperature is up to 105 and the humidity down to the vanishing point, one cannot but wonder what would happen if a stray match got to the right place. And it does happen once in a while. Losses sometimes run to thousands of acres.

Gardens

Naturally I was on the lookout for home gardens all along the line. Curiously enough, where people seemed to have the hardest time to eke out a living, gardens were scarcest and poorest. In the Palouse they were good, perhaps the best that we encountered after we left Pennsylvania. One curious trick is to plant enough potatoes for family use in rows 8 or 10 feet apart in the midst of the fallow.

"Here you are, Pop. Teacher sent you one, too!"

NEARBY MARKETS for NEARBY POULTRYMEN

Hawaii, Here I Am!

By L. E. WEAVER

EDITOR'S NOTE: Lee Weaver's comments on poultry have appeared regularly in *American Agriculturist* for several years. He is now in Hawaii for a year, teaching poultry in the University.

MY OLD HABITS still cling to me. This is Sunday morning, and not another soul is stirring in the house or in the neighborhood; yet on the farm it is time to get up, so up I get. What is the use of wasting time like that? Outside the sun is shining and the waves washing up gently on the white sand of the beach, scrubbing it all nice and clean for the tourists who will soon come along in their shiny new Hawaiian attire. That means sunburn mostly.

L. E. Weaver

Occasionally a native will come along. He is on a surf board or patiently trying to teach some pale skinned newcomer to swim. Or it may be a number of native women hunting in the surf for a certain small shellfish that is considered a great delicacy. I have neither seen them nor learned their name. The women have glass bottomed box affairs into which they stick their faces and peer below the water as they stand in water about to their waists. They carry a little cloth bag, and into this they put the spoils of their hunt. But mostly all day long it will be a crowd of migrant white folk out for a vacation.

We have been entertained in some very fine homes and by the same people outside of their homes. I have had a dinner at the best Country Club, another at the Chinese restaurant where they have a beautiful garden with a three thousand dollar illuminated waterfall at the rear of the dining place, at the Waikiki Tavern where one looks out on the best surf-riding place along the beach and where at all hours you can see the riders making their endless efforts to stand erect on their surf boards, and never succeeding.

We recently took an all-day trip around the island, a little less than a hundred miles. We saw the cane-growing areas which are all irrigated, and the pineapple areas a little higher up on the slopes which are not irrigated. We saw many other interesting

things and places. One spot in particular is known as the Pali (pronounced approximately polly). It is a high bluff that overlooks the sea. At all times a most terrific wind blows there. If you don't hang onto your hat as you peer over the stone wall that tops the bluff, it will be snatched up and whirled up and over the top of a high cliff behind. It was over this bluff that the famous King Kaimehameha drove his opponents when he conquered and unified the island under a single ruler. He was an ancestor of Queen Lil who arranged the annexation of the islands to the United States.

Office hours are from 8 to 4. In the morning I get up and go out for a dip before I shave and dress. By that time breakfast is ready. As soon as I get back from the office I go into the water again. Also I lie on the sand. Sunsets are beautiful, and we usually watch them. Night, or rather darkness, comes swiftly here. We do not have the long, lingering twilights you take for granted.

Twice we have gone to the Moana Hotel to see the Hawaiian entertainers. The entertainment is made up of songs and hula dancing. Hula dancing is something typically Hawaiian, and for that reason it is being kept alive. But Honolulu is no longer a Hawaiian town, and even the islands are no longer Hawaiian. I recently saw the proportion of the population that is made up of each nationality, and as I recall, Hawaiians make up 14 per cent. So the only time you see the hula (positively not hula hula) is when some local enterprising business place stages an entertainment of Hawaiian music and dancing. The cleverest stunt is that of the Eastman Company. Once each week they stage a show complete with grass hut, surf board leaning against a tree, an orchestra, group of hula girls and a boy to shin up the tree and throw down coconuts, while a battery of tourist cameras and movie machines photograph the proceeding. At this show a girl explained the hula, and it then took on a lot more meaning. It is an interpretative dance. The interpreting is all done by the movements of the arms and fingers. The swaying of the hips is merely to add rhythm and beauty to the dance.

So far my work at the University has been mostly getting acquainted with the job. It is getting to be plainer all the time that it is not going to be any soft snap. The research can be made to be of really great assistance

to the poultrymen or the islands. Poultry apparently is one thing that does "pay out" here, and it could very well be pushed as a sideline more than is being done. Eggs are selling here now for from 22 to 58 cents per dozen, depending on size. As at home, there are four grades (sizes) at this time of the year when the peewees have to be disposed of.

We will continue one test to determine the amount of pineapple bran that can be used in laying mash. Another will do the same for alberoba meal. This is a ground-up bean and its pod that grow on a very common tree belonging to the legume family. We are attempting to develop a line of Leghorns that are resistant to paralysis. Apparently it has been proven that poultry cannot be successfully kept on the ground due to the year round presence of parasites. Therefore, all the birds at the station as well as on poultry plants are kept on wire. College men are not convinced that breeders can be kept that way, so we will continue tests of breeders on the ground versus breeders on wire.

College opens in two more weeks, and then I will have to start giving lectures to a lot of orientals. They tell me it is a novel experience. Their faces are expressionless, and I am not anticipating that part of the job very keenly.

JAMES E. RICE & SONS

Box A, Trumansburg, N. Y.

By J. F. (DOC) ROBERTS

GOOD lambs, cull lambs, even "skip"
lambs, are all man-made, meaning
that man has it within his power to
produce all good lambs. It is simply a
matter of parasite control, feeding,
housing and breeding.

Briefly, external parasite control
means dipping twice a year, and a sys-
tematic control of internal parasites
means drenching at least once a month
during the summer and once in two
months during the winter. It also
means beginning to drench the lambs
when they are very young. Feeding
means not a "scavenger hunt", but a
good, balanced ration, particularly
good pasture of either a large acreage
or a pasture rotation, and the rotation
is always better. Housing means airy
and dry, a rather hard combination.
Lambs will do better with worlds of
air. They do not care how cold it is,
but they don't want drafts blowing
across them. They do want and re-
quire a dry place to lie down. Breed-
ing means principally good, healthy
ewes and good pure-bred rams.

Add to this program sparkling fresh
water and you will produce "good"
lambs. The details of this entire pro-
gram can be obtained by writing your
State College for sheep bulletins and
other information.

Marketing lambs probably has as
much to do with the success or failure
of your sheep operation as production.
Here are a few rules that may help
you. *First*, sell no lamb from your
flock that isn't a top lamb, weighing
at least 75 to 80 pounds. If your pas-
ture has not achieved this, grain will;
and practically every year the increas-
ed money you will get for your lambs
will more than pay for the grain. This
is particularly true this year. *Second*,
top price is readily and easily known
(Government market reports in your
newspaper). Then if you sell to a
trucker, local dealer, etc., set your price
on that top lamb basis, and let him do
the sorting. You keep the lighter and
thinner lambs until they are also top
lambs. *Third*, never sell your lambs
"at a price", because your neighbor
sold his "at a price". Every year,
whole communities go wrong because
of this practice. *Fourth*, market them
yourself where they will receive buying
competition whenever possible. *Fifth*,
market old ewes that haven't "done
well" immediately. Don't keep them
around.

Wool is one of the most valuable and
yet one of the most highly speculative
commodities on the market. Probably
more wool is "stole" from growers than
any other single farm item. Today the
price in the Northeast for farm fleeces
is 40c to 45c a pound. Of course, part
of this rise is due to war, but wool
was a "sure thing" to go up anyway,
and yet most of our wool sold for less
than 25c a pound on farms this spring.

The best rule to follow when selling
wool is always to "go slow". It will
keep in a good, dry (not too dry), cool
place, almost indefinitely. Most wool
sold in the Northeast is bought for

"I wish that farmer boy would stay
away. Now Junior's trying to spit
through his teeth!"

account of dealers on the Boston Wool
Market. Therefore, why not get to-
gether with your neighbors when you
are ready to sell, and take a truckload,
or a carload, to Boston yourselves?
Sell it where it will meet competition,
and save the commission or profit of
some local buyer. This is already be-
ing done in some places, with excellent
results. If you have a coarse grade of
wool, you can get in touch with some
local mills, such as the Kenwood Mills
at Albany, N. Y. They are in a posi-
tion to, and will give you, an honest
price if they can use your particular
kind of wool.

Marketing lambs or wool is not just
moving or disposing of either. It is a
highly involved, well-thought-out pro-
gram, which spells not only success
or failure to you, but to your neighbor
as well.

★ Make Your ★ Christmas Gifts

by
MRS. GRACE WATKINS HUCKETT

HERE IS a wide choice of attractive, inexpensive Christmas gifts, not too difficult for the busy housewife or even the schoolgirl to make. Also, they allow plenty of choice as to whether to buy material, or to rummage in your own scrap bag for odds and ends and just buy the paper patterns.

Christmas would not be Christmas without toys. "Clownie" is a cuddle toy for toddlers; he comes cut 12 inches in diameter, front and back with his funny little face, hat, hands, feet and ruffle all included in packet No. M-136. Very simple to make.

"Golliwog" is the sort of thing the college girl likes to have around. 20 inches tall, inky black, chalky white, scarlet and indigo blue make him colorful and fantastic enough to thrill the most collegiate. All materials except stuffing — silks, felts and cottons come in packet No. M-185.

"Hans Brinker" is almost an 18-inch square blue pillow, cut out between the trouser cuffs to fit easily around one's

shoulders. He has a cute head with Dutch personality and a haircut, a cap and jacket. All materials except stuffing are included in packet No. M-915. Pattern only is M-915-P.

"Sleepyhead" sheet and pillow case show two tots and their kitten trudging upstairs, then snoozing away as good children should. The package includes boilproof borders as well as embroidery threads. The sheet is No. M-910, the pillow case M-910-C.

For the "teeniest" member of the family, there is sacque No. B-8232. It is fashioned of fine quality pure wool, pink or cream, serge stamped for delicate touches of pastel embroidery. Floss included.

Another idea for the littlest people is the bib and toy set B-8240 with its nautical atmosphere of sailing ship motif and sailor boy doll. Fast color blue and white percale are the materials; bib is already made with flannel lining and "catch-all" pocket, blue binding and tie strings. Blue patch and material for toy are included.

Cunning Dutch girl potholders No.

B-8102 are fast color gold and white percale, stamped, padding included. These make a bright spot on a tea table or beside the range.

A touch of distinction is given to Pillowcases No. B-3335 by the triple row of hemstitched fast color binding in pastel shades of pink, green and orchid.

These 42-inch wide pillow cases are stamped on seamless tubing for easy embroidery.

Oyster linen guest towel B-8019 is stamped on fine quality linen for easy-to-do embroidery. Size is 14x20 inches. Towel No. B-8021, same size and material, has a different but equally attractive design, also in pastel colors. Both have selvage at the sides, fringe at the ends.

Every woman can use a bridge set sooner or later. No. B-8116 is attractively designed for simple stitchery on oyster linen. The cloth is 32" square and is finished with fast selvage or hems on all sides. Four napkins are included.

For the little girl who can sew or for the little girl who must be sewed for, Doll Dress Pattern No. 2755 is a real thrill. With this set of patterns and instructions, doll costumes from

six different countries can be made, Dutch, American, Spanish, Italian, Russian and Danish. Sizes are for 14", 16", 18" or 20" doll. The material requirements are given on the pattern envelope.

The highschool or college girl would be charmed by a gift of a complete lingerie set. Pattern No. 2984 includes a nicely fitted petticoat with loose flare at the bottom besides panty and brassiere which can be made to match. These might be neatly tailored with self bias binds. Pattern sizes are 14 to 20 years, 34 to 42" bust. Size 36 takes 1½ yards of 39-inch material with 3 yards of lace for the combination. 1½ yards of 39-inch for the petticoat.

The travelling woman would like a gift of folding slippers and a neat bag into which they may be tucked. Pattern No. 2763 comes in sizes small, medium and large. Medium is size 7, and requires ¼ yard 27" leather for soles, ¾ yard for bag and slippers, ½ yard of 35-inch material for lining of both.

For the woman who likes to crochet, basket design No. N.W. 354 will have

B-8240

great appeal. It may be applied to towels or napkins. The material required is 1 ball knitting and crochet cotton, white or ecru, No. 4 steel crochet hook. The narrow ribbon trimming is optional.

An apron always makes a most acceptable gift. This nicely flared apron pattern No. 2810 with its flowerpot applique pocket and effective ric-rac trim would make a very gifty-looking present indeed. The pattern comes in three sizes, small, medium and large. The medium size requires 1 7/8 yards of 39-

Mammy Doll Pattern No. N.W. 686 would be a favorite with any little girl. The other figure is her "Honey Chile", all dressed up in little flared trousers and a button-up-the-front blouse. Material requirements and instructions are given on the pattern envelope.

No. M-136—Clownie, stamped materials and instructions.....	\$.25
No. M-136-P—Clownie, pattern, only.....	.10
No. M-185—Golliwog Packet.....	.50
No. M-915—Dutch Boy Pillow.....	.50
No. M-915-P—Dutch Boy Pillow, pattern only.....	.10
No. M-910—Sleepy Head sheet size 36 x 54.....	.70
No. M-910-C—Pillow case size 12x17.....	.30
No. M-910-P—Sleepy Head Patterns only.....	.10

B-3335—Pillowcases—per pair.....	1.00
B-8019 and B-8021—Oyster linen guest towels, each.....	.45
B-8116—Bridge set, cloth and four napkins.....	1.00

To order the above items enclose money order or stamps, and write name and address clearly; state color, size and choice clearly when one is required, and mail

inch material, 3 3/4 yards of braid. Applique pattern is included.

With suede cloth and other glove fabrics available, any woman who sews can enliven her costumes by many changes of gloves. Embroidery Pattern No. E-11170 is designed in sizes 6 1/4, 6 1/2, 6 3/4, 7, 7 1/2 and 8. It will require 1/4 yard of 35-inch material to make a pair of gloves.

That beautiful nightie that every woman covets can be made at home at minimum cost and can have a few touches of handwork to give it distinction. Pattern No. 2794 is in the latest mode with tied-in waist and flowing lines. Sizes are 12 to 44. Size 36 requires 3 1/4 yards 35-inch material, 2 1/2 yards of lace edging.

Even an old dolly needs a new winter outfit and any little girl would adore such a present. Style No. 2965 includes patterns for a stunning six-piece wardrobe for 14", 16", 18" and 20" dolls. Material requirements are on pattern envelope.

Smartly dressed little girls nowadays wear pinafores as their mothers did before them and a cuter little-girl style there never was. Making your own is a grand way to save—if you don't believe it, just price them in the stores. Pattern No. 2752 comes in sizes 2 to 10. Size 4 requires 1 1/2 yards of 35-inch material with ruffle.

order to Embroidery Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

Orders for the following paper pattern numbers should be sent to Pattern Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y., together with your name and address, and size of pattern. Price is 15c for each pattern.

Emb. 11170, gloves; No. 2752, pinafore; No. 2755, foreign doll costumes; No. 2763, slippers and case; No. 2810, apron; No. 2794, nightgown; No. 2965, doll's winter wardrobe; No. 2984, lingerie set; No. N.W. 354, crocheted basket; No. N.W. 686, mammy doll and Honey Chile.

Old Home Week at Waynor

IV. The Old Captain's Money.

THE LAST and most delightful day of the week was Old Homestead day, on which it was the plan to take a long, leisurely drive through the town, and call at a number of old houses.

To those of us who were boys and girls a generation ago, this of all the week was the day of retrospect.

The day was far from being given over wholly to pensive meditation, however, even among the "old boys." Viewing homesteads appeared to start a new crop of stories. Each one suggested some remembered episode of town history; and at the rallying-place that evening there were more stories told than ever. Of them all none raised a heartier laugh than that of old Capt. Tony Beckwith's money, and the hunt his relatives had to find it.

Capt. Antony Beckwith had been a seafaring man. During the War of 1812 he commanded the privateer, *Sally Ann*. At the close of the war he abandoned the sea and came to Waynor, where he had two brothers living. He and his son Abel built a large two-story farmhouse, the old Beckwith homestead.

It was a very large house and had a huge old-fashioned brick chimney at the center. On the foundation, in the cellar, that chimney was sixteen feet square. There were seven large fireplaces, as many capacious "ash-holes," and two brick ovens. It is said that there were thirty-five thousand bricks in the chimney. Two such large ovens were not needed, and the one in the front room was afterward bricked up.

He never took readily to bucolic phrases or to the ways of farmers; and after three or four years of it he left the farm to Abel and went to sea again, this time as master of a trading brig, out of Salem harbor, on long voyages "round the Horn" to the west coast of America, trafficking for furs with the Indians. These were lucrative ventures, and it was from them that the old captain made his money. He was then said to have a half-bushel measure full of gold coins.

By 1829, however, being now sixty-six years of age, he again gave up the sea, and came back to Waynor to live on the farm with Abel and his wife. He kept his money in a heavy, brass-bound sea-chest under his bed; and the front room, which he occupied, was an arsenal of cutlasses, pistols, carbines and boarding-pikes. Abel's wife, Eunice, who was a mild little woman, suffered agonies of fear when caring for the old man's room.

To the last year of his life he insisted on having breakfast at five in the morning, winter and summer alike. At four o'clock he would stalk forth from his room and bawl, "All hands on deck and a rope's end for the last one!"

He drank an inordinate quantity of rum, and waxed correspondingly red and stout, but lived till 1859, to the age of ninety-six. He never troubled himself much about the farm after his return, but left that to Abel. He took a great interest in town affairs, however, and always wished to be one of the selectmen.

He attended all town meetings, particularly the March meeting, and invariably had a barrel of rum in his pung. Nothing suited him better than to be called on for a speech, and his speeches would set every one laughing. After he had spoken he would broach the barrel of rum.

He was not on the best of terms with his two brothers, Sinclair and James, and their families, for they were con-

stantly importuning him to aid them, arguing that it was his duty to do so, especially after Abel Beckwith was accidentally killed by a falling tree about 1843. "Let every tub stand on its own bottom," he used to say to his brothers and nephews.

Sinclair and James had numerous children. There were Sinclair junior, Antony, named after the old captain, Pliny, George, James junior, Adelbert and five or six girls. And after Abel's death all these nephews and nieces entertained great expectations from Uncle Tony, for Abel had left no children.

They were very jealous of Abel's wife, however. The old captain was rather fond of this daughter-in-law, a

By C. A. STEPHENS

submissive, pretty little woman, who never gainsaid him in anything. In truth, she stood in great fear of the old man, but kept house for him, and as he became infirm, waited upon him dutifully—no light task.

At last, in 1850, a distant cousin of the family, named Robinson Lovegood, who had come there on a visit, took a great fancy to Mrs. Abel Beckwith and married her—with the old captain's blessing.

This carried consternation among the nephews and nieces, and there was some hard feeling.

All this tickled the old captain, who was not a man of great sensitiveness, and he had a great deal of fun with his relatives—fun of a rough kind.

He remained the same rough, hard-headed old sea-dog up to the last, and one cold January morning in 1859 he was found dead in his bed—with the sea-chest under it. Eunice remembered afterward that he had said to her

the night before that there was something he wanted to tell her.

Robinson Lovegood and Eunice were the only persons in the house at the time of the captain's death. The tidings went abroad, but the nephews and nieces did not reach the house till afternoon. They came then in force, with a lawyer; and without stopping for ceremony, or even for decency, they hauled the sea-chest from under the bed where the body lay, found the key and opened it. A disagreeable surprise awaited them. The only thing in the chest was an old brass sextant!

They turned then on Robinson Lovegood and Eunice, and accused them of robbing the chest, all the more vehemently since Eunice had not denied that she knew where the old captain kept the key.

In the squabble that followed they almost forgot to bury the old man. It was bitter, snowy weather. Lovegood and Eunice were the only ones who went to the grave. Sinclair and James were so angry that they would not come to the funeral.

And this was merely the beginning. The day after the funeral they all came with their lawyer, and began searching the house. Already they had set spies to watch Lovegood and Eunice. There was no doubt that the old captain had had money in gold; and he had said to them all that he had a will.

At last they procured a warrant and had Lovegood and Eunice arrested, but could prove nothing against them. James Beckwith had called on the old captain but two days before he died; and now the others began to suspect James of looting the chest.

In April the heirs drove Lovegood and Eunice away from the old place. The house now stood empty; but after every few weeks, or months, some one of the relatives would think of a new place to search, and then more wall boards or floor boards would be torn out. It was during that spring that they took down the cellar wall and did most of the digging.

Eunice and Lovegood had bought a farm in an adjoining town. The heirs watched all their expenditures.

That summer, in August, Adelbert Beckwith went to the old place and got

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

Grandfather

"Cubist" and "Futurist" would have meant nothing to him:
The former might have suggested his honest cords of wood,
Tight packed and dry for winter's use;
The latter, perhaps, brought visions of an ageless future.

As he walked with cane in hand across the late October fields,
And gazed lovingly upon the shocks of yellow corn,
The meaty golden pumpkins, and the autumn hills—
Himself typifying the Indian Summer which precedes the cycle's end—
We felt that the achievements which he valued most
Were the ones which he shared with God.

—Winifred S. Haskins,
7 School Street, Adams, Mass.

a basket of pippins; and a waggish neighbor told James and Sinclair that he had seen Adelbert carrying away something heavy in a basket. James and Sinclair made a descent on Adelbert's house and searched it. They actually came to blows, and Adelbert had his cousin James put in jail for entering his house and assaulting him.

By this time the whole town was interested. Many and various were the opinions held as to where the money had gone. But nothing came of all the digging and searching. The old house stood there deserted. James would not let the other relatives sell it.

By 1881 all the land except ten acres had been sold for taxes; and that spring the old house and the remaining land was in turn advertised for sale. Robinson Lovegood and Eunice had a son, named Antony, after the old captain, whom they had liked in spite of all his eccentricities.

In 1881 he was twenty-two years old. His father died that year, and Eunice had always wished to come back to Waynor to live. Tony therefore attended the tax sale, and bid off the old Beckwith place at four hundred dollars. In September of that year he set to work to repair the house. He and his mother had planned to come there to live, and sell the other farm.

The old house was in so bad a state that they were obliged to take out nearly all the inside of it; and they concluded to tear down the chimney. Tony hired a mason and several men, but led the work himself; and on the second day they had removed the chimney down to the first floor, where were the oven and ash-holes.

Quite unexpectedly he broke into the top of another oven, which had been closed up so long ago that everybody then living had forgotten it. When Tony thrust his crowbar through the arched top of this old oven he was merely surprised at first; but on enlarging the hole, he was much more astonished to see several dusty packages of papers with strings attached to them, and a long, slim leather bag that looked like a large black sausage.

For a moment he stared into the cavity. Then came the recollection of what he had so often heard his mother say of the search after the old captain's money and will.

He set the men, who had seen noth-

The Song of the Lazy Farmer

MY NEIGHBOR says that horses is plumb out of date, he's traded his and got a tractor, now he goes a-chuggin' up and down the rows, and if it's cold or if it's hot it doesn't bother him a lot, he says his tractor don't git tired, it ain't like some men he has hired. He works from dawn to set of sun and gits a lot of his work done, he don't rely on hired men, but just climbs on his tractor, then away he goes; all by himself he does his work and keeps the pelf. He has no collar galls to fix, nor currying, nor feed to mix, nor hoofs to shoe, nor call the vet, his tractor ain't had colic yet. He's sure in love with that machine, he fills it up with gasoline, nor stops to let it breathe or rest until the sun sinks in the west.

Of course he's got expense for gas, for tractors don't eat oats or grass, I tell him when the year is done he'll find he's paid out lots of mon for gas and spark plugs and for oil; then, too, he's wearin' out his soil, for tractors don't make no manure, so all in all I ain't so sure that my old nags ain't still O.K., I know I like them, anyway. A tractor never has a colt, it can not reproduce a bolt when it's wore out, while horses will repair themselves when they've been ill. In winter they git fat and strong so when the springtime comes along they're ready for the season's toil without no cost for gas and oil. Then too, if I should go to sleep upon a tractor, it would keep right on a-tearin' up the crop, while my old horses they just stop and join me in a snooze and nod, instead of rootin' up the sod.

ing as yet, to work on the other side of the chimney, then brought a basket and cleared out the oven.

AS SOON as the workmen had gone that evening, however, he and his mother examined the strange find with a curiosity that can be imagined better than described.

Beyond doubt, it was the old captain's money. The leather bag contained fully two quarts of gold coins: English guineas, American eagles and half-eagles, and Spanish doubloons, probably obtained at South American and Cuban ports on voyages to the northwest coast. One end of the bag contained silver coins, and in an old Manila envelope there was a package of state bank-bills. The other bundles of papers were chiefly marine insurance policies, old contract papers and invoices of cargo.

Tied up by itself was the will, drawn and witnessed in New London, Connecticut, in 1851. It was a very brief document, and after bequeathing the homestead and five thousand dollars to Eunice Lovegood, directed that the remainder should go to the Beckwiths of Waynor, to be divided according to the law of the state, and named the judge of probate for the county as executor.

The old man understood his nephews; and he appears not to have cared to make a more definite will in their favor. The law might divide it among them, for aught he cared, but he wished to remember little Eunice, his son's widow.

And after all, there was not so very much money; not much, judged by modern standards. Altogether, the gold, silver and bankbills amounted to a little more than seventeen thousand three hundred dollars.

THERE are those who, if they had found money under such circumstances, would have kept it and said nothing, claiming it as treasure-trove, or arguing that as they had bought the old house, whatever they found in it was theirs. But Tony Lovegood and his mother were not of that sort. Tony himself wished to call in two neighbors, as witnesses, and put it all in the hands of the judge of probate at once.

But Eunice said, "No. The Beckwiths have waited twenty-two years, and they can wait a little longer. We will say nothing till we get our house done in November. Then we will give a Thanksgiving dinner and invite them all here. After dinner we will bring on the will and the money, and let them all see it and read the will. Perhaps then they will believe that we are not so very dishonest, after all."

Tony had some doubts about the propriety of this course; but to please his mother he consented. They put their find away in a safe place, and later on gave the Thanksgiving dinner, as Eunice had planned, in honor of the restoration of the old homestead.

THE Beckwiths were a little surprised at the invitation, for some of them had said hard things of Eunice. Adelbert Beckwith and his sister Clarissa did not go—did not even reply. But many of the younger generation had grown ashamed of the quarrel; and moreover, these young people liked Tony Lovegood. So there was a good attendance at the dinner. Thirty or more of the grand-nephews, nieces and cousins appeared, and had a good time.

When Eunice brought on the "treasure-trove," and the will had been read, Tony made a little speech. He alluded lightly and deprecatingly to the old quarrel over Captain Beckwith's money, and said that now it had come to light, he hoped all hard feeling would be a thing of the past. He then gave a standing invitation to every one to make the old homestead the family headquarters from that time on.

The young people shook hands on it,

Growing Old

By AMY ATWATER.

Must you and I be somber,
Now that we are growing old?
The grandest tree, the poorest weed,
Wear autumn red or gold.
They flaunt the beauty May foretold
For every living thing;
So why should we be sad, my friend?
We, too, have had our Spring.

and the hatchet was buried forever, so far as they were concerned.

The will and money were turned over to the judge of probate, and in due course—more than twenty-three years after his death—the legacies were distributed among his relatives as the old captain had desired.

"Personal Problems"

(Continued from Page 5)

There may be trouble and unhappiness ahead.

Breaking up a girl's love affair is the worst a mother can do...and so many have done it. "For my daughter's own good", many will say. But...I wonder. Sometimes a girl would be better off to go ahead and make a bad match...to burn her fingers and ever after avoid the fire, than to live out her years in bitter repression and hatred for her mother, who made her deny her one chance to live and try her emotional wings. Wetting the feet in the stream of life is better, always, than sitting becalmed in a tight boat in the shallows, just watching others pass by on the full tide.

We all have a destiny to fulfill...an obligation to life. Your individuality is the only coin in which this obligation can be paid. An individuality overshadowed by that of another cannot function as it should. It is your right and privilege to defend your individuality, preserve it and nurture it in strength and growth. If your mother threatens to thwart your attempts, be gentle...but firm. Psychologists tell us that grasping, self-interested people such as these are really victims of a feeling of inadequacy...so must impose their wills on those to whom they are emotionally bound to bolster up their ego. Treat her, if she is such an one, as you would a greedy child, who unable to get what it wants from life, itself, depends upon you to make up the difference. You would not allow such a child to take up all your time and attention, would you? Do likewise with Mother.

Consider All Things Well

Would I be making a mistake to marry a man I only have a liking for, when the man I love does not propose?

I'm not so young, anymore, and it bothers me greatly. I'm tired of waiting for No. 1 to propose; yet it does not seem quite fair to him to engage myself to No. 2 without giving him some inkling of what I'm planning. My parents tell me I should sort of "speak for myself" with No. 1; I know many women do, but I'm afraid my courage would desert me. If there were only some delicate way I

"It's a purty thing, but darned if I can remember why I bought it!"

could get it out of him, one way or another. Even the worst would be better than indecision.

Neither of these men live nearby nor even know of each other's existence. Both are good men; but I have serious doubts whether I could ever really love No. 2. It does not seem fair to let him build hopes.

Your advice will be much appreciated. —Two on the String.

YOU have, indeed, propounded a question. One very difficult to answer.

A great deal depends, I should say, on how long No. 1 has kept you waiting. You have not told that important fact...if he has been stringing along five or six years, then I should think you are definitely wasting your time and letting your youth slip past and that you had better try to develop a taste for No. 2, who evidently has asked you to marry him.

If, on the other hand, you have not given No. 1 a long enough time, then rub up your patience and wait for true love for which there is no real substitute, although women have made shift with second best and presented a good front to the world and a certain measure of contentment and congeniality have brought something closely resembling happiness. Not exactly the genuine article, however.

Sometimes it takes a man a long time to screw up his courage to the point of taking on the responsibilities of wife, home and family...especially when he plans to take these responsibilities seriously and really care for his obligations. In such a case, you're better off for the waiting.

* * *

What to Do With Nagging Wife

I am not a rich man...but I have spent all I have ever made on our home and for things my wife has indicated a desire for. I am not an angel...but I try to be reasonable about all things and hold my temper, knowing that a "soft answer turneth away wrath". I take an interest in the children, stay home nights and do the best I can as a husband. Still, my life is made almost intolerable by my wife's constant nagging. What in the world more can I do? Can you suggest any cure for her?—W. O.

FIRST, make sure that your wife is physically o. k. Ailments of the flesh, chronic or acute, can sour the disposition of the sweetest woman. Your wife may be ill; have the doctor check her over.

Second, make sure that she is not worn out with hard work. Maybe she needs a vacation from the daily grind. Sending a sharp-tongued wife away for a few days, where she will not be confronted with her usual family problems can work wonders in her disposition so that she will be sweetness and light when she comes home. Sometimes a woman stays so close to home that she "can't see the trees for the forests"...in other words hasn't the right perspective to appreciate the good thing she has.

If you are sure she is sound physically and not overtired, try reasoning with her. Point out to her the importance of a congenial atmosphere in the home from the standpoint of its being a happy place for the children. Try to convince her that you have done and are doing your best.

If the first three points do not obtain in your case; if you have married an acid-tongued woman who takes pleasure in making those miserable around her, then you'll just have to toughen up your skin, let her words roll off as lightly as they roll out and learn to whistle. A man who can whistle while his wife nags won't ever have to spend his last days in a sanitarium for the treatment of nerve disorders.

But...before you do any of these things...look closely and make sure that you've not made out too good a case for yourself, and presented only one side of the picture. It's so easy to excuse ourselves for our own acts, and put all the blame on the other fellow.

How To Relieve Misery of Your CHEST COLD

Massage throat, chest, and back with plenty of Vicks VapoRub at bedtime. Then spread a thick layer on chest and cover with a warmed cloth.

VapoRub's double action brings double relief. It acts as a poultice to penetrate the surface skin; and its soothing medicinal vapors are breathed direct to the irritated air passages.

Try it, to loosen phlegm—to clear air passages—check tendency to cough—and also to relieve the tightness and soreness of chest muscles.

VICKS
VAPORUB

To Relieve Bad Cough, Mix This Recipe, at Home

Big Saving. No Cooking. So Easy.

You'll be surprised how quickly and easily you can relieve coughs due to colds, when you try this splendid recipe. It gives you about four times as much cough medicine for your money, and you'll find it truly wonderful, for real relief.

Make a syrup by stirring 2 cups of granulated sugar and one cup of water a few moments, until dissolved. No cooking needed—it's no trouble at all. Then put 2½ ounces of Pinex (obtained from any druggist) into a pint bottle. Add your syrup and you have a full pint of medicine that will amaze you by its quick action. It never spoils, lasts a family a long time, and tastes fine—children love it.

This simple mixture takes right hold of a cough. For real results, you've never seen anything better. It loosens the phlegm, soothes the irritated membranes, and quickly eases soreness and difficult breathing.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action in coughs and bronchial irritations. Money refunded if it doesn't please you in every way.

Kernels, Screenings and Chaff

By H. E. BABCOCK.

WITH ALL the persuasiveness of which I am capable I should like to call attention to the plight of hundreds of farmers living in the drought areas of the Northeastern states.

So many sections have enjoyed beneficial rains this fall that the fact that there are still large areas which have not had even enough rainfall to start up the grass on burnt out pastures and meadows, to say nothing of replenishing springs and wells, has quite generally escaped public notice. *The public also has forgotten about the hundreds of farmers who will be out of hay by the first of January, who have almost no silage on hand, and whose cows, due to insufficient pasturage this summer, are going into the barns so thin that they cannot possibly produce a normal amount of milk before June.*

GOVERNMENT AID NEEDED

Under ordinary circumstances I do not believe in any government subsidies to agriculture. I do believe, however, and have always believed that there is a public responsibility for lending aid to groups of citizens who through no fault of their own become the victims of such catastrophes as floods, droughts, and wind storms. Fortunately, the federal government through its ownership of large stocks of feed surplus, acquired at low prices, is in a position to take steps to help the drought stricken farmers of the Northeast carry

The mountain in this picture forms one of the corner posts on the 06 Ranch in the Highland Hereford area of Texas. In the foreground are several hundred acres of the kind of grazing which makes the cattle from this section famous.

their livestock through the winter and to put this livestock back into normal condition.

All that is needed to crystallize action, in my opinion, is for the members of Congress from the afflicted areas of the Northeast to get busy. *Some of them might well forget their worries about European affairs and concentrate for the time they are in Washington on doing something about the intolerable conditions in their home districts.*

About three years ago a little red-headed urchin began coming out from Ithaca to Sunnysables to sit on the fence and watch the boys at work. Later he climbed down off from the fence and took a hand himself at whatever job was under way. Then, one by one, he began to appropriate the responsibility for certain chores. Finally he worked up to his main objective. He put it up to Sunnysables to sell him a Guernsey heifer. The sale was made and Jack Connor of Ithaca, New York, became the proud owner of Eleanor of Banksburn. Entirely on his own initiative and with his own hands Jack fitted his heifer and showed her this fall at the Tompkins County Fair, where she was first in her 4-H class, while Jack was winning first in showmanship for himself. Then he took her to the New York State Fair at Syracuse where she was again first in the 4-H class and second only to the grand champion herself in the open class. As long as boys like Jack are coming along, the livestock industry of the Northeast is in safe hands.

Fall Seedings

Throughout the Northeast are thousands of acres of new seedings which were put in during August and September. There have been rains in some areas and these seedings have made a remarkably fine growth.

In other areas the seed laid in the ground for weeks before it germinated; indeed, some of it has just germinated. We have two fields on our farms which are in this condition.

Now, every acre of new seeding is badly needed because, unless I miss my guess entirely, the stands of grass on many old meadows have been irreparably damaged by this summer's dry weather. Therefore, the problem of how best to care for fall seedings becomes a real and vital one.

About the only thing that can be done to protect tender grass seedlings now, however, seems to be to cover them with a straw mulch. Where straw is cheap and available, or strawy manure is available, I am of the opinion, after careful inquiry, that it may be worth while to top-dress fall seedings so as to cover them with a mulch of light material at least two inches deep before it freezes up.

I think that we shall try this with one ten-acre field at Sunnysables because I am very sure that the alfalfa seedlings now on this field will never live over the winter unless we give them some protection.

* * *

Hog Returns

Rather against the advice of the farm management experts — and throughout the years I have found their opinions generally to be sound and worth following — we have kept on our farms for the last few years a small herd of brood sows. With the sale of our spring litters, our returns for 1939 are all in now. On an average herd of five sows and a boar, cash receipts

total \$1,226.44, and we have four good sows and the boar left, three 200 lb. shoats for home consumption on hand, and 30 pigs in the feed lot.

We expect to breed the four sows next week and to carry them through the winter, as we have successfully done in recent years, mainly on grass silage and an ear or two of corn apiece each day, or a little ground barley.

* * *

Chopped Straw Bedding

Due to rather good crops of small grain this year we have an abundance of chopped straw for poultry litter and for livestock bedding. We are enjoying the experience.

There is nothing which quite sets off a nice Guernsey cow, an Angus steer, or a Rhode Island Red hen quite as effectively as a floor of nice clean, bright straw. Animals which have plenty of dry bedding also make better use of their feed.

Because we find the chopped straw so handy to use — it is all blown into the lofts in our barns and finds its way to the places where we need it for litter and bedding by gravity — and because it works so evenly through the manure spreader, I cannot help coming back to the thought that farmers in the grain-growing areas in the Northeast who have a surplus of straw are missing a tremendous bet in not putting bales of chopped straw on the market.

I feel certain that a duck grower on Long Island or a poultryman in New Jersey would quickly become enthusiastic over baled chopped straw and I am sure that in the long run the savings in transportation would go a good way toward covering the cost of chopping and baling.

All that is needed is a practical baler for chopped straw. The choppers are in every neighborhood and there is a surplus of nice clean straw in many sections of the Northeast.

AGRICULTURIST
PROTECTIVE SERVICE

Examine It — Then What?

"When the policy reaches you, examine it in the quiet of your home without the urging of any agent."

This statement is taken from a sales letter received by a New York subscriber by an out-of-the-state insurance company. It sounds very reasonable, but is it? Let's look back of the scenes a minute. The New York State Insurance Law, designed to protect you, prohibits the sale of life insurance by agents unless the company is licensed to do business in the State by the Insurance Department. THE LAW DOES NOT PROHIBIT THE SALE OF POLICIES BY MAIL BY COMPANIES NOT LICENSED. If you get into difficulties with such a company the Insurance Department has no authority to bring pressure on the company. In the light of these facts, the plea to examine the policy without any urging on the part of the agent does not sound too inviting. For example, how can you ask questions of a form sales letter?

Not Registered

"I am writing for information about the Gil-Boat Company of Holland, Michigan. I have been considering the investment of some money in this concern, but before doing that, I would like to get all available information."

We are informed that a Mr. Gilbert, who we understand is one of the principals of the Gil-Boat Company, was indicted by the Grand Jury of Miami County, Ohio, on charges of violating the Ohio Securities Act in connection with the Gil-Boat Company. Gilbert and other men connected with the company pleaded not guilty and were released on bail. Last May 11 the Securities and Exchange Commission stated that they had filed an injunction in the United States District Court at Dayton, Ohio, charging M. L. Gilbert and Christian Beck with violations of the registration provisions of the Securities Act of 1933.

Advance Fee

"I have a letter from the Northwest Devices of Portland, Oregon, expressing some interest in a device I recently had patented. Before dealing with them, I would appreciate having you check on them for me."

In some cases, at least, Northwest Devices have written inventors suggesting the need of a "survey" and offering to go fifty-fifty on the cost involved. As a general proposition, we have never felt it wise to advance money in order to secure the sale of

anything, be it an invention or a farm. Too often the deal seems to go no farther after the advance has once been made.

Selling Eggs

There are two kinds of egg buyers in New York City—licensed and bonded commission men, and direct buyers. In both classes you will find firms with good financial ratings and those where a credit agency will recommend cash dealings. In both cases you will find men who are fundamentally honest, and others who will take an unfair advantage if they see the opportunity. It is important to check the financial and moral reputations of the men to whom you sell regardless of which group they are in.

There is, however, an added protection when you ship to licensed and bonded commission men—that is, if you are a resident of New York State. The State Department of Agriculture and Markets require that all men who sell farm products on commission secure a license and take out a bond to protect shippers of farm products. In case a commission man fails, the amount of the bond is used to satisfy New York State shippers who sent produce to them and who did not receive their pay.

It pays to be especially wary of the buyer who solicits your shipments in the fall when supplies are short. His bait is a premium above the market which he is more than likely to get back when supplies get flush. If a dealer treats you fairly it's only square to stay with him the year round.

Charged With Cattle Frauds

In Dauphin County, Pennsylvania, three cattle dealers have been arrested and released on \$1500 bail. They are charged with a conspiracy to cheat and defraud the State of Pennsylvania and the Federal Government by making false claims for indemnities on diseased cattle. It is claimed that the defendants switched ear tags in order to collect indemnities by fraudulent means.

The arrests resulted from an investigation conducted by men from the Pennsylvania Department of Agriculture, the Department of Justice, and members of the State Motor Patrol.

Better Service

We are more than glad, in fact, anxious to answer reader's questions. Here's a hint to help get you better service. When you inquire about the standing of a business firm include all the information about it, such as the kind of business they are in and what proposition they offer. In case the firm is unfamiliar to us, it is very helpful to be able to direct our inquiry to the proper source of information, which means that our reply to you will be mailed more promptly.

A fraud order was issued against NATIONAL WEEKLIES, INC., at Winona, Minnesota, by the Postmaster General. These publications have appealed from this order to the Federal Court and pending disposition of the appeal all mail is being impounded by the Post Office.

We wish to get in touch with Mr. Harold Belden, address unknown except that he is a resident of New Jersey and has been working as a salesman for a company manufacturing shirts. If Mr. Belden or any of his friends read this we would appreciate a letter.

A MAN, A TREE A CAR OUT OF CONTROL

JOHN B. WHEELER (deceased) of North Haverhill, N. H., was the man who lost his life in the accident—the car in which he was riding ran into a tree and was wrecked.

THE TREE into which the car crashed is on Route 10, north of Lebanon, New Hampshire.

FORTUNATELY for the family, Mr. Wheeler carried our limited travel accident policy which provides cash help in the event of death or total disability as a result of the wrecking or disablement of an automobile in which the insured is riding—something went wrong with the steering gear.

Mrs. Wheeler gratefully writes:

North American Accident Ins. Co.
Ithaca, New York

Dear Sirs:

I have just received your check for \$1,000.00 in payment of policy held by my late husband, John B. Wheeler. Thank you for your kind and courteous service. I recommend that everyone should carry your travel accident policy.

Yours truly,

Ruby R. Wheeler.

FEED DOWN, MILK UP COWS THIN, HAY SHORT

Winter Feeding Plans Must Be Based on These Facts

EACH WINTER the problem of feeding your cows is a little different. This year on most farms conditions are about like this:

Feed prices have dropped back from the unreasonably high levels that were established immediately after the outbreak of war. You can now buy your winter supplies at prices only a little above last summer's lows.

Milk Prices are Better

Many cows are thin and down in production because of the pasture shortage in drouth localities. A competent authority says that cows are going into winter quarters thinner than at any time in his memory.

There is a shortage of hay where drouth damaged pastures, necessitating heavy summer feeding. Farmers who have extra hay are inclined to hold onto it because of the drouth damage to old meadows and new seedings.

Feed Must Match the Hay

The amount and quality of hay available affect the quantity of grain that must be fed. The type of hay determines the protein level of the grain ration. The general rule is:

With good legume hay, a 16% or 18% feed.

With good mixed hay, a 20% feed.

With timothy or over-ripe legume hay, a 24% feed.

If you have to feed poorer hay than usual, your cows may need a higher protein ration this year. Very poor roughage can be supplemented with molasses economically; it increases the feeding value and makes the roughage go farther.

The cow's body is built to handle large quantities of roughage. She gets from good hay the bulk she needs, and also some mineral and vitamin values which cannot entirely be replaced by grain. If you are short of hay and can get good hay at a reasonable price from a neighbor, it might be well to spend a

little money for hay and buy less grain.

For years many dairymen have fed hominy with Milk Maker as a maintenance ration. At present prices this is a sound practice. Both hominy and corn meal are cheap. Both are excellent feeds for getting cows back into condition, and for supplementing short supplies of hay.

Fitting the Feed to the Cows

Cows are individuals. No single feed will fit the needs of all cows nor the feeding practices of all dairymen. It has always been the G.L.F. policy to make available a full line of feeds of different protein levels to fit the varying needs of cows as to milk and fat production, stage of lactation, etc.

About three-fourths of all dairymen who feed G.L.F. dairy rations use one of these four feeds: 24% Milk Maker, 20% Exchange Dairy, 18% Legume Dairy, 13% Fitting Ration.

This group is called the Approved Flexible Formula Feeds—approved because the formulas are approved

A shortage of hay cannot be entirely offset by heavy grain feeding. It's better to buy a little extra hay if it can be had at a reasonable price.

by the College Dairy Feed Conference Board; flexible because the formulas may be changed occasionally to take advantage of favorably-priced ingredients. The open, flexible formula is the most economical method of buying feeds for farmers ever developed. Very high standards of quality and digestibility are maintained on these feeds. The fat guarantee is 4%, which experience and research have shown is about the right level for sustained production.

There are some very good dairy feed ingredients, such as linseed meal and coconut oil meal, which are too costly and too limited in supply to be included regularly in all dairy feeds. The value of these ingredients is very widely appreciated among dairymen who feed high-producing

herds, and therefore they are used in the G.L.F. Super Feeds—16% Super Test Feed, 20% Super Exchange Dairy, 24% Super Milk Maker. The formulas of these feeds do not vary. They contain 4½% fat, which is of value to high-producing, high-testing herds, and they are extremely high in total digestible nutrients.

With Home-grown Grain

Two high-protein supplements are available for dairymen who have some home-grown grain—30% Dairy Supplement, 34% Dairy Supplement. These may be mixed with ground grain in the proportions shown on the tag to give any desired protein level. 24% Milk Maker may also be used in this way.

KATRINKA GOES TO 19TH ANNUAL G.L.F. STOCKHOLDERS' MEETING

KATRINKA is just a grade Guernsey, but for thirteen years she has heavily patronized the G.L.F. for feed, seed, and superphosphate. In eight lactations she has made 104,629 pounds of milk.

This year she will break her usual

Katrinka is ready to leave for Syracuse

routine and journey to Syracuse October 30 and 31 to be present in the Dairy Booth at the 19th Annual G.L.F. Stockholders' Meeting. Together with a registered Holstein from another farm, also a 100,000-pound producer, she will demonstrate to G.L.F. committeemen and stockholders the truth of the slogan, "More Milk and A Better Cow Left."

At the business session approximately 3,000 stockholders will elect five men to the Board of Directors. Those whose terms expire this year are: H. L. Benson, Mansfield, Pa.; C. E. Snyder, Pittstown, N. J.; E. B. Clark, Norwich, N. Y.; Harry Bull, Campbell Hall, N. Y.; J. D. Amele, Williamson, N. Y.

Dr. William I. Myers, Head of the Department of Agricultural Economics and Farm Management,

New York State College of Agriculture, will speak Monday afternoon on the subject, "How World Conditions Can Affect Farm Prices."

The business session Tuesday will be highlighted with an address by Dr. William Martin, Dean of the New Jersey College of Agriculture and Director of the State Agricultural Experiment Station.

Most of the Stockholders who will take part in the business of the meeting are elected by patrons in each community where G.L.F. service is offered. It is through them that users of this cooperative exercise democratic control of their organization.

AMERICAN AGRICULTURIST

FIVE YEARS FOR \$3.00 — THREE YEARS FOR \$2.00 — PUBLISHED EVERY OTHER WEEK

Practically all of our farm equipment has been acquired at auctions.

MY WIFE and Elmer and I go to lots of auctions and generally to good purpose. Almost always we take Mr. Updike, with us, too, he being an auction-goer of note, and a sound guide as to prices, bidders and general conditions.

Practically all our farm equipment has been acquired at auctions, and not infrequently have we seriously discussed changing the name of our place from Stoneposts to Auction Acres. We got our dump rake for \$5, our mowing machine for \$12, the disk harrow for \$4, our walking plow for \$1, and other items at comparable figures. All of them have been, and are, in good working condition, and after I've painted them up with odds and ends of left-over paint, you could not tell they weren't new—at least you couldn't from the road, or without getting out and coming in.

Auctions can easily become a dangerous and expensive habit, like taking drugs or collecting postage stamps. We realize that and never start for a vendue without first pledging one another to remain steadfast to our principles, which are:

1. Never to bid on anything just because it's cheap.
 2. Never to get carried away in the heat of competition to the extent of going beyond a previously agreed figure just to beat out the other fellow.
 3. Never to bid on any article for which we have not immediate and certain need.
- Once my wife slipped to the extent of ac-

GOING TO Auctions

By
ROMEYN BERRY

quiring a potted fern for ten cents, and another time Elmer opened the bidding with a fifteen cent offer for a keg of odd nuts and bolts, and got it instantly at that price. Elmer felt pretty sheepish about that business transaction until we later messed around among the nuts and bolts and found under them a hand-forged clevis, a cold chisel, and a Stillson wrench. And my wife's defense to the potted fern incident turned out to be plausible and adequate. She thought her shoe-lace had come untied, she said, and when she looked down to see, the auctioneer took it for a nod and sold her the potted fern. What was the sense of making a scene and getting the auctioneer mad at her over a ten cent potted fern, even though she never had the slightest intention of bidding on it? She said if he'd knocked down a manure spreader to her at \$57.55 when she looked at her shoe, she would have

done something about it, and in no uncertain terms, but over a ten cent potted fern she preferred to keep acting like a lady.

Going to auctions with my wife and Elmer and Mr. Updike is fun, but sometimes coming home from auctions is less enjoyable. Take last Saturday at Kidder's Ferry, for example, where Elmer bid in fifty-four brand new potato crates with elm posts at fourteen cents. We needed the crates and had been dickering for some others at a quarter. It was a mighty good buy, but I supposed we'd leave the crates and get them next day with a truck. But not at all—not at all! We were going to take them home with us in a car that seemed reasonably well filled with just my wife, Elmer, Mr. Updike and myself. And we did it, too, by making use of devious back roads where we successfully avoided traffic. For with fifty-four potato crates festooned around our Ford we took up more road-room than a load of hay and made more noise than the sale of four little pigs out of a litter of eight.

Merry and gay on most occasions, auctions can be, of course, sad affairs, and sometimes heart-breaking. I mean the occasional forced sale of a family home that has been brought about by death, debt, or disaster. We stay away from that kind as a rule, or go merely to the barn to bid on such impersonal items as a log chain or a section of spring tooth harrow. We can't quite stand seeing the house that has been a home grow emptier or more forlorn as buyers drive off with one piece of furniture after another—the look in the children's eyes when the old cow is sold to the butcher—the almost imperceptible shudder that passes over the widow when the auctioneer makes jokes about the black

walnut table she brought with her as a bride, or the crib that was Johnny's when he was a little shaver.

But heart-breaking auctions are rare up our way. Most of them are bright and amusing with a good time had by all, and I fancy we'll keep on going to auctions even after we've acquired all the farm equipment we need—if that time ever comes on any farm. And we shall certainly go to all the auctions this fall because we really need a fanning mill.

Some folks go to football games on Saturday afternoons in October and November, and we did once, but I think there's quite as much excitement in hitching up the Ford after dinner, and piling in my wife and Elmer and Mr. Updike, and starting off up a back road through the scarlet maples to another auction which might prove to be the historic occasion—it's always possible—when we shall acquire a fanning mill in good working condition at \$4.20 on which we had authorized Elmer (with the advice and approval of Mr. Updike) to go as high as \$4.55 if forced to.

Short of Hay ?, See Page 5 — Winter Poultry Chores, Page 15.

THE PRACTICAL, common sense way to reduce grinding costs and increase feed value for stock is to invest in McCormick-Deering Feed-Grinding Equipment.

Two McCormick-Deering Hammer Mills are available: the large capacity No. 10 and No. 10-C for all grains, hay, and roughages, and the lower-priced No. 5 for small grains, shelled and ear corn, and dry roughages. The No. 2 Roughage Mill is a dandy, too, for handling all grains and roughages. Three sizes of feed grinders with 6, 8, and 10-inch grinding plates also available.

You can depend on these machines for excellent work, long life, and low upkeep during all the years they are in use. Ask the International Harvester dealer for a demonstration.

INTERNATIONAL HARVESTER COMPANY
(INCORPORATED)
180 North Michigan Avenue Chicago, Illinois

You have a wide choice of easily changed grinding screens in the No. 10-C Hammer Mill shown above.

Left, above: The No. 5 Hammer Mill. Its simple, sturdy construction makes it a stand-out in its field. Right, above: The No. 2 Roughage Mill, popular for doing custom work.

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange.

NEW HAMPSHIRE State Grange has again this year carried out its Boston marketing tour. A large delegation from all parts of the state spent two days visiting the big produce markets, milk distributing plants, etc., with a social evening and banquet in between.

FOR THE annual session of the Maine State Grange opening at Portland, December 5, the Hotel Falmouth has been selected as State Grange headquarters. All convention sessions will be held in the city hall. This is expected to be the largest session attendance that the Grange in Maine has ever known, increased by the fact that many important questions of public policy will be up for discussion, besides being biennial election year for State Grange officers.

A CONNECTICUT wedding of recent interest witnessed the marriage of two well-known young people in Farmington River Grange at Huntington Center, when Leroy Dimock Tucker, son of State Master and Mrs. Edgar L. Tucker, was married to Miss Virginia Hubbell. They will make their home at Huntington Center.

THE RECENT annual session of the Vermont State Grange, held at St. Albans, was very happy to welcome as guests, members of the Order from New York, every New England state except Maine, and New Jersey, which was represented by State Master David H. Agans, Overseer of the National Grange, who was the guest speaker. The sixth degree was conferred on a class of 242 candidates, following the initiation of 70 others at a special meeting at Manchester in September, making a total of 312 sixth degree initiations for this year.

NEW ENGLAND Grange Sunday at the headquarters building on the Eastern States Exposition grounds at West Springfield, Mass., brought together more than 600 Patrons and their friends, and proved again the value of such a building for that group of states.

ON THE OCCASION of their 25th wedding anniversary Mr. and Mrs. David Kidd of Dansville, N. Y., were "surprised" by the receipt of a "greeting card shower" which was almost overwhelming and which testified to the affection of friends scattered all over the Empire State. Mr. Kidd is a member of the executive committee of the New York State Grange and Mrs. Kidd is State Juvenile Superintendent.

RECENT MEETINGS in Connecticut have seen the presentation of several Golden Sheaf and many Silver Star certificates, rewards respectively for 50-year and 25-year continuous Grange membership.

IN ERIE County, N. Y., Lawtons Juvenile Grange members have spent a busy summer working on safety posters as a part of their project, "Safety on the School Grounds". The children took lots of interest in this undertaking and their posters showed marked originality. The exhibit was taken to the Erie County Fair and received first prize.

GRANGE WORK in New York has received a decided impetus by a series of four special meetings in the eastern part of the state, in which a group of counties have combined in the exemplification of the ritualistic work, in each case under the supervision of the county deputies of that locality. Not only have the degrees been beautifully presented, but in addition some fine

GROWERS COMMENT

ON

Surplus Apple Purchases

TALKS with a number of fruit growers indicate general approval of the surplus buying plan for apples as handled by the Federal Surplus Commodities Corporation. (F.S.C.C. for short). This surplus buying plan was requested by growers and, with some changes, is similar to the plan followed a year ago. Changes include the requirement that growers divert into by-products a quantity of cull fruit equal to that sold to the F.S.C.C. Prices paid are to be announced periodically, based on the market.

In Vermont, growers have objected mildly to the requirement that apples purchased in any state be distributed within that state. With a large crop of apples and a rather small relief roll, it is estimated that only from 3 to 4 per cent of the Vermont crop could be distributed through relief channels in that state.

There is an occasional comment in New York State that it would be more helpful if the government would buy lower grades, but the overwhelming opinion seems favorable to the present plan which restricts purchases to U. S. No. 1 and the U. S. No. 1 and utility combination pack. Commenting on this angle, Frank Beneway of Ontario, Wayne County, N. Y., says:

"The requirement for top grades has been beneficial in requiring growers to put up a better pack. After all, the U. S. No. 1 and the U. S. No. 1 and utility combination is not too much to ask any grower to pack. In recent years the stores have asked for better packs and grades and have indicated that the cull problem is the growers' problem. If this is true, the growers have not solved the problem, but it would help if all growers would suggest to stores that they be reluctant to buy cull apples."

J. D. Ameele of Williamson, N. Y., says:

"Growers in general are in favor of this plan, and in this county we have a very efficient set-up to handle the program. A year ago there was some delay in getting back reports on spray residue, but this has been corrected. Prices paid by the F.S.C.C. are favorable considering the size of the crop."

J. L. Salisbury of Phelps, N. Y., says:

"Growers here generally favor the plan. It is helping some to dispose of their fruit who could not do so in any other way. I think, if it is continued, the market later will be better."

M. N. Wadsworth of Oswego, N. Y., says:

"Some of the smaller growers who have never packed U. S. No. 1 are not selling to the F.S.C.C. When they come to grade, they cannot meet the specifications. They also have to purchase

baskets, liners and caps, as well as stencils, and some do not have facilities for ring-face packing."

In charge of buying in New York State are Robert Tyson and E. C. Little, located at the Rochester office of the F.S.C.C. at 21 S. Fitzhugh Street. W. R. Tousey of Waterport is chairman of the Central and Western New York Regional Committee, made up of the chairman of each of the county committees; and Lawrence Howard of Kinderhook is chairman of the Hudson Valley Regional Committee. Names of members of county committees can be secured at county farm bureau offices. Growers with apples to sell should contact their county committee rather than the Rochester office.

It has been announced that total purchases of apples for relief for the entire country may run around 10,000,000 bushels. In New York State about

120 carloads a week have been purchased. In Maine purchases are not expected to exceed 2,500 bushels a month, with purchases in other Northeastern states proportioned according to production.

Another western New York grower, commenting on the diversion requirement of the plan, says:

"Surely this will place a large amount of cull apples where they belong. In a recent trip to New York City, I was told by a large handler of apples that there have been fewer cull apples shipped to New York than in any other year in his experience."

Here is a comment on prices made by an apple grower:

"Price paid for surplus purchases has been equal to and sometimes above the market price, resulting in a tendency to raise the market price and thus prevent the collapse of all apple prices. I realize that some will disagree with this statement, but I am convinced that a careful check-up will prove that it is true."

Another comment is as follows:

"The price seems to be fair for the varieties and size. The government plan should help hold prices and move apples out of surplus sections. Had it

not been for the government surplus plan, I would have left my Greenings on the trees. As it was, I loaded a full car of 528 bushels and received 75c a bushel."

There is a distinct feeling among many growers that buying of surplus apples should be considered only as a crutch to be used temporarily until growers can handle their own marketing problems. Again quoting Frank Beneway:

"All of the F.S.C.C. officials I have met have indicated a desire to have growers do everything possible to help themselves. The F.S.C.C. can be one of the very helpful agencies in solving the apple marketing and distribution problem. The one angle of which I am fearful in the whole surplus purchase deal is that we may become dependent on too much government aid. The surplus purchase program should always be considered supplementary to a growers' self-help selling program, using all available facilities to do the job ourselves."

Commenting on the buying program, Tom O'Neill, Manager of the New York-New England Apple Institute, says:

"I have personally talked with Mr. (Continued on Page 10)

Thanksgiving

A FEW WEEKS ago I stood with a friend and looked upon Plymouth Rock. Then I walked with him up a little hill to the burial ground where sleep the Pilgrim Fathers. The sun was shining, but there was a bitterly cold wind blowing off the sea. The surrounding country is covered with scrub oak, and is practically worthless from a farm standpoint. Certainly a more barren or inhospitable place on the whole Atlantic Coast could hardly be found. Yet the Pilgrims landed there, and by almost superhuman efforts founded homes, and laid the foundations for a nation. With little, indeed, to be thankful for, they held the first Thanksgiving.

This year Thanksgiving will be celebrated at different times in our different northeastern states. But that matters little. What does matter is to use this time to re-emphasize again in our hearts and in our lives those Pilgrim principles that made this the greatest nation on earth.

It is a good time to remember, also, that the Pilgrims came here to escape the evil rulers, the persecutions, the broils and troubles, and the lack of liberty in the Old World. Before another Thanksgiving rolls around we may be influenced by propaganda and unsound emotion to get entangled in a European war. If we do, you may be sure that the things Americans have been building since the days of the Pilgrims will be lost. We have more to be thankful for than any other people on the earth. Let us not forget it.

Farmers Can Pull Together

EATING breakfast in a restaurant in Syracuse on the second day of G.L.F.'s annual meeting last week, I overheard the conversation of some farmer members at the next table. Said one of them:

"Last night I went to bed early, but no sooner had I got to sleep than six or eight farmer delegates came busting into my room, and insisted that I go down and have something to eat with them. Of course I had just eaten a big dinner before I went to sleep, but what the heck! Don't often get a chance for any fun, so I went."

This chance to get away from work, to rub shoulders with other men in a great organization, and to have a good time, is one of the benefits from a big cooperative meeting. More than 3,000 men, coming from almost every community in New York, New Jersey and northern Pennsylvania to attend the G.L.F. meetings, had this opportunity for a much needed relaxation, and at the same time they took back home to their fellow members the enthusiasm that comes from such a great meeting, and a freshened knowledge of the work and business of their organization.

No one could attend this meeting and see the exhibits of G.L.F. work and listen to the business-like reports without realizing that farmers can work together when they are organized on right lines and with right leadership.

Another impression was the almost universal feeling of optimism that prevailed in this large group, based on the general belief that at last the long, hard turn from bad times to good has come, and that from now on farmers can pay off their debts, add to their equipment, and give their families the standard of life to which they are entitled.

A question that one interested in the future

of agriculture thinks of in attending the annual meeting of the G.L.F. is, how much should other business in the same lines fear cooperative competition? My answer to that is that any business supplying farmers has no more to fear from a cooperative movement than from any other form of competition, providing, of course, that one's own business is on its toes all the time to render the best possible service. Temporarily either a cooperative or a corporate business may forge ahead, but on a long time basis the one that does the best job will get the business. There is plenty of room for both the cooperative and corporate form of business, in fact, it would be a tragedy to farmers should either have a complete monopoly.

They Meet the Test of Time

ONE OF the tests of an individual, an institution, or an organization is time. Does it wear well?

The Farm and Home Bureaus fully meet that test. For more than 25 years these organizations have been working with farmers, or more accurately, the farmers have been working through the Farm and Home Bureaus to help themselves. No period in all history has seen more changes, or been more difficult for farm folks, than that 25 years. Yet the

Farm and Home Bureaus have met those changes as they have come, survived each test, and are doing business at the old stand today stronger and better than ever. In fact, without such organizations as the Grange and the Farm and Home Bureaus thousands of farm folks could not have come through the dark days as well as they have.

But now, as we look forward into the future, with wars and rumors of wars, we know that rapid changes in all of our economic and social life will come faster than ever. We know that farming will be a different job than it has ever been before. We know that only those will survive who are quick to recognize changes and to use every available means of help. Organizations like the Farm and Home Bureaus can be just as helpful as farmers themselves make them. This is the time to line up in membership for the coming year, and I have no hesitation in urging you to do it, not to help the Bureaus, but to put yourself in line to let them help you.

Some Facts About Market Reports

"You are the editor of the *American Agriculturist*, a newspaper supposed to be of great value to us farmers.

"There is no doubt that you are of invaluable assistance to us at times but when you publish such items as the attached clipping taken from your paper of Oct. 28th the damage you do our markets offsets more than a score of times the good you do us in other ways. You should have gray matter

enough to know that markets cannot be built up by advertising surpluses. You did this same thing two years ago and I understand you admitted at that time that the figures were wrong but I cannot find where you tried to help us out by making a correction. I hope I am conveying to you just what you are doing to us with the power of the press.

"Still with kindest regards, I am

Yours truly, P. D. VERCROUSE,
Oswego Gardens, Inc. Oswego, N. Y."

THE CROP report to which Mr. Vercrouse refers was published in our October 28 issue, and read as follows:

"ONIONS—The New York onion crop is of good size and good quality. For the state the estimate is 4,092,000 sacks, compared to 2,961,000 sacks a year ago. For the entire country the estimated onion crop is 13,451,000 100-lb. sacks, compared to 11,157,000 a year ago, and a ten-year average of 9,914,000."

Mr. Vercrouse is a good farmer, a good citizen, and a good fellow, and I would have been inclined to pay little attention to the above letter, taking it for granted that it was written on one of Pete's off days, like we all have, except for the fact that he has been airing similar sentiments publicly for some time, so that the facts need re-stating.

In the first place, Mr. Vercrouse is the manager, and we understand part owner of a corporation farm. He complains about the surplus, but one big corporation farm is responsible for more surplus than a large number of family-owned farms all taken together.

In the second place, we have no recollection of ever making any promise to correct State and Federal market reports published in *American Agriculturist*. We have no authority to make such corrections, for the reports are not ours. They are furnished by the State and Federal governments for the benefit of every farmer, not for a favored few. They may be inaccurate at times as to exact figures, but they are approximately right, and it is the consensus of the farmer opinion of America that these reports are immensely helpful. *American Agriculturist* does not attempt to forecast prices. That is the farmer's responsibility after he has all of the information available on the size of the crop. **But we shall continue to use every effort to get all possible information to farmers that will help them better to sell their crops.**

Mr. Vercrouse's request to us to withhold facts about the farm markets is not in accord with his usual fairness. Apparently he does not want his fellow farmers to have the facts. All dealers and middlemen have the facts, of course, about the markets. They know all about the surplus. So do the big operators like Mr. Vercrouse, who can hire their field work done and have money to belong to national reporting associations and time to study reports, which the average farmer does not have.

Eastman's Chestnut

HERE'S one to try on your back-seat driving friend:

The husband drew up his chair beside his wife's sewing machine.

"Don't you think it's running too fast?" he said. "Look out! You'll sew the wrong seam! Mind that corner, now! Slow down. Mind your finger! Steady!"

"What's the matter with you, John?" said his wife, alarmed. "I've been running this machine for years!"

"Well, dear, I was only trying to help you, just as you help me drive the car."

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR FARM PRODUCTS.
3. LOWER FARM TAXES.
4. A GOOD LIVING FOR EVERY FARM FAMILY.
5. MORE FUN ON THE FARM.

"Where's Our Hay?"

ever straw is refused will then be used for bedding. With this roughage feeding program we will probably have to increase the grain feeding by about 2 pounds per heifer per day over the amount of grain required to produce a satisfactory rate of growth when the heifers get all the hay they will consume.

This heifer ration will be short in calcium, phosphorus and vitamin D. To correct these deficiencies we will put 1% steamed bone meal (feeding grade), 1% finely ground limestone, and ¼% cod-liver oil concentrate in the grain ration.

We feel that hay is so important in the ration of calves under one year of age that they will be provided with all the hay they will eat regardless of cost.

In general, our feeding program this winter will be to replace hay in the ration with silage as far as is possible without seriously influencing production and the health of the animals.

Obviously, dairymen who have a shortage of both hay and silage have a more difficult problem to solve. There is nearly a normal hay crop in certain sections in New York State and the yield has been reported as good in Michigan and Ohio. Dairymen living within reasonable trucking distances from areas where the hay crop was normal, and where there is hay for sale, will probably find the purchase of hay the most economical solution.

A good quality of hay will furnish about 50 pounds of total digestible nutrients per 100 pounds. A good concentrate mixture will furnish approximately 75 pounds of total digestible nutrients per 100 pounds. In other words, it requires 3 pounds of good hay to equal 2 pounds of concentrates on a total digestible nutrient basis. Thus, when 300 pounds of good quality legume roughage can be purchased for less than 200 pounds of grain, restricting roughage is not economical. As the quality of hay goes down, more hay is required to furnish the amount of total digestible nutrients contained in one pound of grain. Since the freight rate or trucking cost is the same on a ton of poor hay as on a ton of good hay it is more economical to purchase the best grades of hay.

Regardless of the ratio between the cost of nutrients in grain and hay there is a very definite limit to the amount of grain that can be safely fed.

* Ed. Harrison is a member of the staff of the Department of Animal Husbandry at the New York State College of Agriculture.

Excessively heavy grain feeding is usually accompanied by an increase in udder troubles, breeding troubles, and digestive upsets. In other words, roughage can not safely be eliminated from the ration regardless of cost. If, because of economy, it becomes necessary to increase the rate of grain feeding, the concentrate mixture should be made as light and bulky as possible. Wheat bran and ground oats are two of the most bulky and safest feeds for the dairy cow. The concentrate mixture can also be lightened by feeding it with beet pulp when beet pulp can be purchased at a favorable price.

Molasses is a fairly cheap source of carbohydrates and can without question be used to advantage on many farms. It can be diluted with water and sprinkled over low grade roughage to increase palatability. By this method, cows can be encouraged to consume roughage that would otherwise be refused. It must be realized, however, that a low grade roughage is being fed and that production is likely to be somewhat lower than where a high quality roughage is fed.

Another method that might be used to apply molasses to low grade roughage would be to mount a barrel of molasses on a stand and direct a stream of molasses on the roughage as it passes through a chopper. If a large amount of molasses is applied there would be some danger of spoilage if chopped too far ahead of feeding.

There are a number of miscellaneous crops that, if available, can be used as a roughage supplement. These are not of enough importance to justify individual discussion.

In the final analysis, each dairyman must work out a solution to his own roughage problem. The proper solution will vary with each farm and also in different sections of the country, depending upon the feeds available and feed prices.

Where there is a roughage shortage, failure to provide cows with a satisfactory ration this winter will affect production over a much longer period. After a winter with unsatisfactory feeding conditions, cows will be in such poor condition that production will continue at a low and unprofitable level next summer, regardless of feeding conditions.

A PROGRAM

IF YOUR supply of roughage looks short, it is a good idea to take inventory now. Figure how many tons of hay, silage and straw you have. Then estimate the number of feeding days you will have until pasture, and a little arithmetic will show you how much roughage you have per day per animal.

The next step, if your figures show you are way short of roughage, is to decide whether to dispose of a few of the poorer cows, or canvass the possibilities of buying hay or making up the deficiency by purchasing grain.

In this inventory it is worth while to look around for possible supplies of roughage substitutes. In fruit sections you may want to feed some cull apples this fall. Potatoes are bringing too good a price to feed any except those that are unmarketable, but you may have an opportunity to buy some apple pomace, peavine silage or some other material that will furnish feed for your herd at a lower cost than purchased hay, especially if it has to be brought in from a considerable distance.

After you have done this, read Ed. Harrison's suggestions on this page and lay out a program that will best meet the situation on your farm. You can save money by doing this now rather than waiting until the roughage is nearly gone.

Short of Hay?

Some Suggestions Toward Solving the No. 1 Problem on Many Dairy Farms

By E. S. HARRISON *

DAIRYMEN in many sections of the Northeast face a serious shortage of hay as a result of the severe summer drought. How should this situation be met?

On farms where there is an actual hay shortage, failure to figure out a satisfactory supplemental feeding program will cause a serious drop in milk production. A large part of the cost of producing milk is fixed and remains unchanged regardless of whether the cow is producing 25 or 50 pounds per day. Because of this fact, the most economical herd production is obtained when the cows are fed liberally enough to make full use of their inherited ability to produce. The prospect for more satisfactory milk prices should encourage liberal feeding even though feed prices are abnormally high.

Undoubtedly the situation here in the University herd is similar to that on many other farms. Here is what we plan to do. We had a very satisfactory yield of first cutting hay, but the second and third cuttings were almost a complete failure. Short pastures from July throughout the remainder of the summer forced us to feed quite a lot of our winter's supply of hay as a pasture supplement, and we face the winter feeding period with about 60 per cent of a normal hay supply. In spite

of the drought our corn crop was fairly good and our silos are all full. As a matter of fact, we have about 25 per cent more silage than we put up in a normal year. The yield was not above average; we just had more acres of corn to put into the silos.

With a normal supply of hay, we attempt to feed our cows about 1½ pounds of hay and 2 pounds of silage per 100 pounds of live weight. This year we expect to feed just under 1 pound of hay per 100 pounds of live weight and all the silage they will consume. Without question, this feeding program will slightly reduce the amount of total digestible nutrients the cows are getting from roughage. Silage is bulky and the dairy cow does not have the capacity to consume as much dry matter in silage as in dry hay. To make up for this, we plan to feed a slightly higher ratio of grain to milk.

We plan to follow a little different feeding program with our heifers. About 60 heifers that are housed in one barn will be fed as follows:

They will get one feeding of hay, about ½ pound per 100 pounds of live weight, and 3 pounds of silage per 100 pounds of live weight. In addition, their mangers will be filled once per day with good bright oat straw. What-

**SUGAR CURING
SMOKE SALT**

WHEN you cure meats on the farm with Sterling Smoke Salt, you cut out all the guess-work in old-time methods of curing meats, as well as a lot of the bother. Here is a smoke salt that is uniform. The formula was developed by the International Salt Research Department. It is a balanced blend. It always gets the same results if you merely follow the easy directions.

Sterling Smoke Salt cures, flavors and adds tenderness to meats all at one operation. It contains the highest quality meat curing salt, blended with choice spices, and flavory brown sugar for good taste, saltpeter to preserve good color, and the flavor of distilled liquid smoke to add that smoky zest. Ask for Sterling Smoke Salt by name—buy it in 2 lb. 2 oz. cans, or economical 10 lb. can, which will cure up to 100 lbs. of meat.

PREMIUMS—A quality butcher knife with carbon steel blade and a bell scraper for removing bristles can be secured at about half the retail cost. Use the coupon in each 10 lb. can of Sterling Smoke Salt. These tools are invaluable on the farm. Get them now! Have them to use for your next butchering.

STERLING SEASONING adds delicious flavor to roasts, meat stews, poultry dressings, meat loaves, baked beans, gravies, and other foods. It makes the tastiest sausage. Buy it in cans containing 7½ lbs., 10 ounces, or 3 ounces.

SALT IS "WHITE GOLD" FOR THE FARMER'S PROFIT

Salt is called "white gold" because it earns so much for the farmer when properly used. A proper feeding of salt to live-stock means more than better health—it means increased milk production, fatter hogs, healthier calves, and extra profit all along the line. Write for a copy of "The Farmers' Salt Book," which contains advice and information

How to Sharpen PLANES and CHISELS

and Other Notes of Interest to the Farm Mechanic

By I. W. DICKERSON.

EVERY FARMER should have at least a 14-inch jack plane and a small 7-inch block plane, if he does any construction or repair work at all. Even those who have these get very poor results, because a dull plane wastes time and material and does a botched job. A few simple directions will enable any one to keep his planes in good condition ready to do first class work.

A smoothing plane bit should be at right angles to its length but rounded about 1/64 inch at the corners to prevent ridges on the planed surface, as shown at (A) in illustration. Next set the T-bevel at an angle of 25 to 30 degrees, as shown at (B), and grind the bit on a medium grit grinding wheel. Test the angle with the T-bevel (D) until a slight wire edge can be felt.

Dip the edge in water occasionally, as overheating, as shown by a bluish color, will ruin the temper. The bit should then be whetted on a good oil stone, lifting it slightly at the heel (E) so it touches for about 1/32 back from the edge. The bit should then be rubbed flat on the stone (F) to remove any remaining wire edge. A plane bit should be whetted several times before it needs regrinding, and less sharpening will be needed if a scraper and brush are first used on boards to remove grit.

Chisels should be sharpened in exactly the same way as plane bits, except that the corners are not rounded.

Put Pump Cylinder Below Water

A reader asks the proper place to put the pump cylinder in a well 60 feet deep. The depth to water surface rather than the depth of the well, determines the proper location for the pump cylinder. Most authorities recommend that the pump cylinder be put below the surface of the water since this avoids much trouble from loss of priming due to leaky valves, gives longer life for valves and leathers and requires no more work in pumping. In no case should the cylinder be more than 22 feet above the water level in dry weather.

Use Proper File to Sharpen Saw

The proper size and type of file is almost as important in sharpening a saw as knowing how to do the work. A friend almost ruined a 10-point hand crosscut saw by trying to use too large a file. These files should be used:

5-inch special extra-slim blunt saw file for 10- and 11-point crosscut hand saws and for back saws.

6-inch special extra-slim blunt saw file for 6-, 7-, 8-, and 9-inch crosscut hand saws.

7-inch special extra-slim blunt saw file for 6- and 7-point hand rip saws.

In general, the file should be of such a size that the side or face will be about twice as wide as the tooth is high. If handsaw blunt files are not available double extra-slim taper files of the same sizes may be used.

Costs \$137 to Wire a Farmstead

A survey by H. H. Beaty, extension agricultural engineer at Iowa State College, covering over 1000 farmsteads, shows that R.E.A. approved wiring averaged four days for two electricians and cost \$137 per farmstead. Beaty recommends making a list of the lights and equipment likely to be used for each room and to plan the switches and outlets for this equipment, even though some of it may not be purchased for some time. Farmers are cautioned about trying to do their own wiring, unless positive that the materials and methods will pass R.E.A. inspection.

Don't Overload Electric Motors

Electric motors will safely carry a fifty per cent overload for a few minutes; but if continued, is likely to overheat and burn out the armature windings. A motor requires a much heavier current in starting than when up to speed, and if possible should not be started under load. Overheating may be caused by over-loading, by lack of air circulation, by lack of lubrication, or by bearings being out of line.

More Power With a Crowbar

If you need more leverage with a crowbar, try slipping a piece of pipe over it and see what a difference it makes.

Use Lard Oil on Taps, Dies and Drills

Keep a can filled with lard oil in the shop for use on taps, dies, and drills. Use it freely on steel, sparingly on brass and malleable iron, and none on cast iron. The lard oil is not so much for lubrication as to clean the tool and keep it cool. Paint "Lard Oil" on the can so no one will use it for regular lubrication.

"Well, Wilkins — try, try again!"

Following Conditioning WHILE DRY on Purina Dry & Freshening Chow

At the Purina Experimental Farm 21 Holstein cows were dried off 60 days before they were due to calve and were fed on Purina Dry and Freshening Chow.

During their next milking periods they gave an average of 33 cans (2,900 lbs.) more milk per cow than they gave the year before, *when they had NOT been conditioned on Dry and Freshening Chow.*

All cows, of course, did not increase the same, depending on their individual ability as milkers.

**8 Cows Increased 40 Cans or More —
6 Cows Increased 20 to 40 Cans — Only
7 Cows Increased Less Than 20 Cans**

Taken on the average, this extra milk we get from conditioning dry cows is by far the CHEAPEST milk produced all through the year. It takes only 5 to 8 bags "D. & F." Chow for the average cow. At today's prices just 9 or 10 extra cans of milk will pay the entire cost.

All extra milk above this means extra money from our cows.

And by helping to build up a cow's strength and condition on the Purina Dry Cow Plan we in turn help her to

**Calve and Clean Quickly — Avoid Badly
Caked Udder — Breed Successfully**

These extra safeguards often are worth many additional dollars.

Feed Dry & Freshening Chow to your next dry cows. See for yourself what it will do. See your local Purina dealer with the Checkerboard sign, or write to

PURINA MILLS
Buffalo, N. Y. St. Louis, Mo.

II.

WHAT NEXT?

IN MY LAST COLUMN, I said I was "sixty-nine going on seventy." To get the most out of life, I suggested a Four-Fold Program which works: "Keep

My Body Strong (fight weakness)
My Mind Alert (fight ignorance)
My Personality Agreeable (fight a
grouch)

My Character Upright through Truth,
Honesty, Purity, Unselfishness, and
a deep Faith in God (fight sin)."

It isn't enough to say that we fight the things that destroy. Action must follow. For example, to fight any weakness means that Action must put in practice a program to keep well. Then to keep absolutely fit we must have a program of exercise, diet, and sleep, and mastery over self. Careless habits weaken our bodies and sickness follows. So far as I am concerned I must have a program to get anywhere. I set certain standards to follow and *follow* them. When I begin to make exceptions, I'm sunk. "But I don't like a program," said one of my friends. "All right," I replied, "if you can keep well without a program, OK, but as I look through the years, not one in fifty becomes master of himself without a program." I could write pages more on this theme, but those of you who have read, "I Dare You," know my program which expresses the philosophy of my life.

At the risk of being called a faddist, I have pounded the health story to friends until I have wearied them. In looking at the life ahead of you, in getting proper values and the right perspective, you must realize sooner or later that happiness and achievement come so much easier when there is abundant energy to drive you forward to your goal. Look around and note how many successful men and women have vigorous, driving energy.

When I was a boy my father used to take me out to teach me how to hunt. He would say: "Do you hear that meadow lark? What is he saying?"

"Laziness will kill you."

"Laziness will kill you."

"Laziness will kill you."

Even today when I hear the meadow lark's distinctive call I remember that story my father told me so many years ago. Laziness will kill youth, accomplishment, and achievement quicker than anything else I know. Irrespective of theories or social changes, work—hard, driving work—is a great blessing to mankind.

I think that life was never more fun for me than it is today. I'm in good health with a home and happy surroundings. I keep my interest in young people and with so many wholesome activities in college, church, and community that I'm busier than I have ever been in my whole life. I try to follow Arnold Bennett's book, "How to Live on 24 Hours a Day," but 48 hours aren't enough for me. I could easily use 96. Doubtless retiring has some advantages, but I don't want to retire. I want to live right in the midst of things. Retiring isn't living, to my way of thinking. But when more Light breaks, I hold the right to change my opinion, as I have frequently done in the past. For the present, indissolubly knit together are myself, my activities, other folks far and near, and God—all my larger self.

What Next? That's the question I'm asking myself. My answer is: More health, more knowledge, more personality, more character—all material, but all spiritual—that in the year ahead, in some small way, my life may make some worthy contribution to the coming of the Kingdom. As I look inward at my resources and outward at the work that awaits me, my vision must not slip away. So together, whether we look forward or backward, or inward or outward, may we ever look upward to catch the Radiance of daily living.

SKEFFINGTON

from SKEFF'S NOTEBOOK

G.L.F. Holds Annual Meeting

WITH the single exception of 1936-37—following severe drought—the G.L.F. handled a record volume of farm supplies during the past year, according to reports at its 19th annual meeting in Syracuse.

During the year farmers purchased 1,100,000 tons of farm supplies through the G.L.F., of which 800,000 tons represented feeds. Total cash value of all the business handled was \$55,000,000. Earnings of the year were \$1,500,000. Of this, members will receive \$900,000 in patronage dividends, \$250,000 was added to capital and \$200,000 held for emergency reserve.

Total volume was 27,000 tons ahead of the previous year, according to the annual report of James A. McConnell, general manager. Referring to the various feed formulas handled by the G.L.F., McConnell said: "Had G.L.F. retail agents and farmers together really done a thorough job of selecting from the many specification feeds those best suited to their needs, just as good feeding results might have been obtained at a saving of perhaps a million dollars."

He said the next job of the organization is to teach employes how to present its service and to teach farmers how to make best use of it.

Thumbs Down on Uplift

McConnell in his address said there are those who believe the ills of society may be solved by co-operatives and who think the G.L.F. management should undertake a crusade for a general co-operative movement. His own idea was that the G.L.F. could serve farmers better by continuing to run a good cow feed service, by improving its fertilizer service and in doing the things it was organized to do.

"With uplifting such a fashionable hobby today," he continued, "and with so many professional uplifters in high government positions, the sure way to keep the G.L.F. an agricultural institution sensitive to the real needs of farmers, if that is your wish, is to keep electing to its board men with rural background."

He said the organization has achieved its present place because of the type of men who have constituted its board. Answering the question of "who runs the G.L.F.?" McConnell said: "I do. Your directors hire management and tell us how they want it run."

Martin Lauds Co-ops

A look around the world discloses that where democracy is strongest, co-operation is strongest, Dean William H. Martin of the New Jersey State College of Agriculture, told the members. "Where dictators flourish cooperatives are suppressed."

Foremost among the pitfalls facing agricultural cooperatives is the breakdown of practical business skill, he said. "A cooperative is a business enterprise." He said production problems have been pretty well solved, and the next great challenge before agriculture is in the field of marketing and distribution.

Five directors were re-elected. They were Clifford E. Snyder, Pittstown, N. J.; J. D. Ameen, Williamson, N. Y., Farm Bureau nominee; Earl B. Clark, Norwich, N. Y., Grange nominee; Halsey L. Benson, Mansfield, Pa., and Harry Bull, Campbell Hall, N. Y.

Sessions were held in the Syracuse Armory, with President Leigh G. Kirkland and Vice-President Frank M.

Smith presiding. The adjoining tank arena was used to house a comprehensive exhibit of the uses and usefulness of the G.L.F. It attracted considerable attention because of the diversity of the displays and the effectiveness with which they were staged.

Myers for Managed Currency

The war is bringing stimulation of farm prices and helping to wipe out disparities, but Dr. William I. Myers of Cornell University warned farmers to go slow about expanding. He declined to predict how long the war might continue, but said that if it was of long duration the basic commodity price level might continue to move upward.

"However," he added, "the tendency is to swing too far, so that after the price rise there may be violent change." Currency management would prevent this, he said, "and if prices rise too greatly we may have conservative recruits for a monetary management program." But at present, he said, the farm price level is 30 to 40 per cent too low.

He said that United States prices may be expected to follow world price

levels, plus the approximate amount of devaluation, unless the gold price is changed. He said that devaluation in 1933-34 did raise price levels and stimulate business, but that now price levels are tied to a fixed value of gold. Monetary management could be used to raise prices of commodities to bring them in approximate equilibrium with the general price structure and hold them there.

"But," said Myers, "raising commodity price levels does not mean raising the cost of living. Reemployment will more than compensate for any increase in cost of living. Rising commodity prices would correct the disparities of 10 years. Thereafter if prices rise further it is to be expected that adjustment of farm and retail prices, wages and cost of living will be much more rapid than in the period of falling prices. It is easier to raise prices and wages than to lower them."

Doctor Myers was introduced by Warren W. Hawley of Batavia, vice-president of the State Farm Bureau Federation. Edward R. Eastman, editor of *American Agriculturist*, introduced Jerome D. Barnum, publisher of the *Syracuse Post-Standard*, who advocated a Supreme Court of Economics to keep the country informed on the true state of economic conditions.

To Promote Apples

Because of the success of a growers' committee in promoting the peach movement some weeks ago, a similar committee has been set up for apples. It has the same officers as the peach committee, Frank Beneway of Ontario, chairman, and Morton Adams of Sodus, secretary. At the initial meeting at Albion representatives of seven counties attended, together with representatives of State College, Farm Bureau Federation, Horticultural So-

ciety, agricultural department and chain stores. Tom O'Neill of the Apple Institute outlined work of that organization in setting up special sales periods with the chain and independent stores. The committee endorsed the work of the Apple Institute and left it largely to O'Neill to carry on. It is felt with the combined support of the organizations and interests represented, the campaign will be effective in obtaining a heavy movement of apples.

* * *

Off to National Grange

As this issue is distributed I will be packing preparatory to a trip to Peoria, Ill., to attend the annual sessions of the National Grange. This will be the first time in a number of years the Grange has met in the Midwest. It is the year of biennial elections. It is expected plans will begin to take shape for celebrating the Diamond Jubilee of the Grange two years hence.

Later this month the State Farm Bureau Federation and the State Home Bureau Federation will hold their annual meetings, and then during the second week in December the State Grange will be in session in Syracuse. It looks like a busy time ahead.

Fur Trapping Regulations

Trappers and prospective trappers of fur bearing animals were advised recently by the Conservation Department of the approaching open seasons on raccoon, skunk and mink. From the first day of November until January 20, raccoon will be legal quarry in New York State. The open season on skunk runs from November 10 until February 10, while mink may be trapped from November 10 until March 15. Fur bearing animals, with certain exceptions, may be taken in any manner, day or night, during the open season. Raccoon may not be taken from dens or houses or by cutting den trees. Skunks cannot be taken from holes or dens by digging or with the aid of dogs. The use of smoke, chemicals, gas or poison is prohibited in taking any of these species of fur bearers.

Traps used in taking fur bearing animals in New York State are not permitted to have a greater jaw spread than six inches and must not contain teeth in the jaws. Traps used in taking fur bearing animals must bear the name of the owner and the owner is required to visit his traps at least once every 24 hours.

At the same time, the Conservation Department called to the attention of trappers that there is no open season on otter, fisher, sable or marten in New York State. Likewise, there is no open season on beaver although the Department has the power to declare an open season during the month of March. The muskrat season in New York State does not open until the first of January.

Apple Recipe Contest Winners

Do A. A. folks like and eat lots of apples? We'll say they do, after reading the stack of enthusiastic letters which have poured into our office as the result of the cash contest announced in our October 14 issue, in connection with Mrs. Hockett's article, "Delicious Apple Recipes."

Contestants were asked to tell how often and in what way they were in the habit of serving apples to their families; also, which of Mrs. Hockett's apple recipes they had tried and how it turned out. So many excellent letters were received that it was hard to pick winners, but here they are:

First prize, \$5.00.—Mrs. Ernest C. True, Fayette, Maine.

Second prize, \$1.00.—Mrs. George M. Woodruff, Machias, N. Y.

Third prize, \$1.00.—Mrs. Clifford Merchant, Williston, Vt.

Fourth prize, \$1.00.—Mrs. Lester Cleland, Lisbon, N. Y.

Fifth prize, \$1.00.—Mrs. D. W. Pease, Laconia, N. H.

Sixth prize, \$1.00.—Mrs. William Crothers, R. 2, Box 272, Lakeland, Florida.

MILK NEWS

THE much publicized milk strike or diversion of milk to those dealers who paid \$2.15 for September milk was a failure so far as any results are concerned. For a day or two, one or two northern New York plants got no milk. Now the milk is coming back. The right of a dairyman, not under contract to deliver his milk, to change his dealer or to keep milk at home cannot be questioned, although the wisdom of such action at times may be open to argument. Neither can there be a question about the right of a man to deliver milk without molestation or threats if he so desires.

When September prices were announced, milk strike leaders declared that a strike could not be averted. When dairymen began to consider that a milk strike might result in an average loss of \$60.00 to every man who milks cows and that the most they could gain would be 6½¢ a hundred for milk delivered during September, which to a dairyman delivering 300 lbs. of milk would mean \$5.85, sentiment for a strike began to dwindle. Realizing this, strike leaders left the decision to strike or divert up to local groups. Some milk was diverted which, of course, had little or no effect on New York City's supply, and this, too, was soon realized by dairymen.

When the question of diverting milk was broached to Vermont dairymen, they indicated with characteristic Yankee independence that they could handle their own affairs. Vermont's Attorney General, Lawrence Jones, issued a public statement assuring dairymen that they had a constitutional right to carry firearms if necessary to protect their right to deliver milk, and furthermore that it was not necessary to secure any permit to do so. That statement strengthened the backbones of Vermont dairymen if any strengthening were needed.

The chief reason why there will be no milk strike at this time and why a strike in the near future is unlikely is that dairymen realize that prices for October and during the entire winter will be favorable. While not satisfactory to everyone, the price of milk will be reasonable in relation to feed costs,

will be above the price level of most farm products and is the best since 1930.

The price amendment to the Federal-State Milk Marketing Order, which went into effect October 1, will continue until May 1, and cooperative leaders have already taken steps to consider further revision of the price schedule before February 1 in order to insure a living price for milk during the summer months.

The chief danger in the situation is that certain elements among milk distributors, who fought the Order since it was first proposed, will be successful in their efforts to nullify it. The danger is not great, but it should not be overlooked. It is also necessary that dairymen continue to support the Order if it is to be effective.

Dairymen are not forgetting that many dealers who agreed to pay \$2.15 for September milk are the same dealers who refused or neglected to pay what they owed into the producers' settlement fund. In fact, at least one dealer (and probably more) who agreed to pay the \$2.15 still owes some of his producers for milk delivered several months ago. If these dealers had paid into the producers' settlement fund the money they owed and which federal authorities have ordered them to pay, the price for September milk would have been better than \$2.15. They still owe the money, and that is a mighty good point on which dairymen, through their organizations, can bring some pressure.

There is another point dairymen remember. If strike leaders were so anxious to get better results for farmers, why did they sit on the sidelines last spring when organized dairymen were campaigning to force dealers voluntarily to comply with the provisions of the Order? Without the help of those who were fighting the Order, dairymen came within an ace of success. Just a little more help by those who claimed that they were so anxious to get better returns for dairymen would have put the thing over and would have prevented the ruinously low prices dairymen had to accept last spring.

For 20 long years, we farmers who own, operate and control the Dairymen's League have been waging a stubborn and bitter battle to give all farmers a voice in the direction of their own business.

For 20 long years, we have steadfastly insisted that dairy farmers—and dairy farmers alone—should say what price represented a fair return on the investment, life-long labor and skill required to produce milk. We insisted that dairy farmers—like all other manufacturers and producers of marketable goods—should be the ones to say what their produce should sell for.

We farmers of the Dairymen's League were the pioneers in the fight for a living price for milk. We cleared the ground and prepared it for sowing. Recently—within the past 3 years—we have been joined in this effort by other farmer co-operatives. Through the united effort and sheer force of numbers of farm co-operatives, the aid of the State and Federal governments has been enlisted. Through the combined efforts of a great farmer majority, we

have been able to obtain the State and Federal marketing orders, guaranteeing us our rights so long as we insist upon obtaining them.

In short, the ground has been cleared and prepared. The seed has been sown. And now the harvest is ready. If we farmers continue to work together... if we continue to present a strong and unbroken front to the dealers and their dupes who never stop their efforts to sow discord among us... if we believe the simple fact that only through standing shoulder-to-shoulder will we ever preserve the advantages we have gained... then we shall reap our harvest in larger milk checks during many months to come. Then we shall come closer to enjoying a living price for milk than we have during all the 20 years that have gone before.

The harvest is ripe and ready to be gathered. At last farmers control their own industry. Let's make certain that we enjoy the harvest... and that we do not again bow our necks to the yoke of the dealers and the anti-farm gang.

Final White Pine Contest Winners

Winner of the \$250.00 First Prize: Earl Roberts, R. No. 3, Kenton, Hardin County, Ohio.

\$100.00 Second Prize: George Sheffer, R. 1, Dover, York County, Pennsylvania.

\$50.00 Third Prize: Robert H. Wendt, E. Lake Rd., Honeoye, Ontario County, New York.

\$25.00 Fourth, Fifth, Sixth, and Seventh Prizes: Clyde Moore, R.R. No. 1, Ansonia, Darke County, Ohio; Frank E. Kaichbaum, R. No. 2, McClure, Snyder County, Pennsylvania; Mrs. George R. Thompson, Canonsburg, Washington County, Pennsylvania; H. R. Reynolds, Wallace, Steuben County, New York.

"WHAT I LIKE BEST ABOUT WHITE PINE IS", and contestants had to complete the sentence. Earl Roberts, of Kenton, Hardin County, Ohio, wrote:

"When lumber is good,—that's quality; when it's inexpensive,—that's economy; when it's both good and inexpensive,—that's honest value; when it's all three,—that's *Genuine White Pine*."

Second prize winner was George Sheffer of Dover, York County, Pennsylvania, who wrote:

"It has all the requirements a good wood should have which is proved to me by an old Switzer barn, 150 years old, which is still standing on my farm with the original White Pine weather boarding on front and rear which is in very good condition, and if kept painted, will last indefinitely. That shows me that I do not have to be repairing all the time if I build with Genuine White Pine. I like it because you can nail it without splitting, it saws so easy, it is strong yet light in weight, it takes and holds paint well, and its weather resisting qualities can't be beat."

While the Genuine White Pine Contest is over, a very interesting "Isn't It a Fact?" series of advertisements is now running each month in this publication which features a new revised edition of the Genuine White Pine booklet and is offered free to our readers. The new book is worth having and may be obtained from the local Weyerhaeuser 4-SQUARE dealer, or by writing direct to the Weyerhaeuser Sales Company, Saint Paul, Minnesota.

Emanuel S. Wene, prominently identified for a half-century with agricultural progress, political affairs, and the social life of Hunterdon County, New Jersey, died very suddenly on October 5th, in his 74th year. Mr. Wene was the beloved father of the Hon. Elmer H. Wene, of

Vineland, N. J., and many intimate friends of Elmer Wene recall with tender recollections the important part that was taken by the father in the development of the son's brilliant career in agricultural, business, and political life.

Many farm families are giving a hearty welcome to an individual freezer storage cabinet new on the market. A $\frac{1}{2}$ or $\frac{3}{4}$ h.p. refrigeration unit keeps the freezing compartment at a temperature of five degrees below zero, and the larger storage compartment adjacent to it at five degrees above zero. According to the ESCO CABINET Company, manufacturers of the new cabinet, this economical "zero-freezing" keeps foods better and fresher than other methods. Vegetables, when cooked, retain all their wholesome goodness, consistency and vitamin content.

The new cabinet is heavily insulated for maximum efficiency and low-cost operation. The body is of heavy galvanized Armco sheet metal, finished in attractive gray enamel. Sizes range up to 25 cubic feet of storage space. Removable shelves, a divided top scuff plate with rubberized cork frost-breaker strips, and a sealed control panel are other interesting features.

Icy roads are one of the biggest hazards motorists have to meet. As yet no one has brought forth a tire chain or any device that will prevent skidding on ice, but SOLVAY SALES CORPORATION have made progress in attacking the problem from a different angle. We all know the effect of salt on ice. Calcium chloride is not salt, but it is a compound closely related to it, and experiments have shown that a mixture of calcium chloride and cinders applied to icy roads make them safe for travel. The latest information on this subject can be found in a booklet "Highway Ice Control" which is available without charge if you will send a post card to SOLVAY SALES CORPORATION, 40 Rector St., New York City.

In recent years the importance of manganese in the soil has been more fully realized, and the addition of this element has worked wonders where certain crop troubles have become evident. You may, therefore, be interested in getting a copy of a booklet called "Manganese: Its Value in Soil, Plant and Animal Nutrition." All you need to do is drop a card to the HARSHAW CHEMICAL CO., 1945 East 97th St., Cleveland, Ohio.

1939 GOODYEAR ESSAY CONTEST WINNERS

The ten farm boys who won grand prizes in Goodyear's 1939 Essay Contest on the subject "Farming of Tomorrow on Rubber" quickly demonstrated their versatility in the field of learning by becoming successful fishermen. Awarded a week's outing in the Canadian North Woods, at Goodyear President P. W. Litchfield's Timagami, Ontario, summer camp, the boys are pictured above receiving instructions in rigging their fishing tackle and within a short time after this picture was taken, many of them enjoyed the experience of catching their first fish. Every member of the party caught fish during the outing.

One northeastern boy, Robert Ector of Wilmington, Delaware, won the trip. Two other boys, Earl Langley of Mars Hill, Maine, and Oliver Hilton of Woodbine, Maryland, were among the 25 who won cash prizes of \$25 each. The contest was open to high school boys who are students in vocational agriculture.

MARKET GLEANINGS

Potato Market Looks Favorable

Reports from Aroostook County, Maine, indicate that potato growers are holding for higher prices. They are basing their action on the belief that prices for all agricultural products will be higher and on the knowledge that there are fewer late potatoes in the East and more in the West than there were last year.

The October crop estimate put the U. S. crop at 13,000,000 bushels less than it was last year, although the supply of late potatoes is practically the same as it was in 1938.

Shipments from Maine bear out the statement that growers are holding. Up to October 16, 2,674 cars of Maine potatoes had been shipped, while on that date shipments usually range from 5,000 to 7,000 cars.

Prices to Maine growers for U. S. No. 1 Green Mountains in bulk have been running from \$1.75 to \$2.00 a barrel. A recent New York City market report quoted up-state New York Round Whites, ordinary quality and ungraded, at \$1.40 to \$1.50 per hundred-pound sack; and Long Island Green Mountains at \$1.85 to \$2.10.

Egg-Feed Ratio

The last week in October it took 6.1 doz. eggs to buy 100 lbs. of poultry feed. The week previous the figure was 5.8; a month ago, 7.9; and a year ago, 4.4. Feed costs have dropped somewhat following the speculative rise after European war was declared. About the first of November it was estimated that the average cost of 100 lbs. of feed was \$1.82, somewhat more than last year's figure of \$1.55 and somewhat less than the 1937 figure of \$1.90.

Eat More Turkeys

Increased consumption seems to be the answer to the turkey marketing problem. It is becoming recognized that more turkeys can well be eaten throughout the year rather than trying to consume them all at Thanksgiving and Christmas. The fact remains that this year's crop is bigger than normal.

The amount of turkeys in cold storage October 1 was also larger than a year ago and about 50 per cent above recent five-year average. To offset

N. Y. State College of Agriculture.

this is the expectation of better purchasing power among consumers and a real tendency to eat turkeys the year around. It appears that growers have marketed larger than the normal percentage of the crop during October and are holding over a larger than normal percentage for Christmas.

Cabbage Being Stored

Reports from western New York indicate that a price of around \$15.00 per ton is being paid by dealers for cabbage to storing. F.O.B. sales on sacked Danish cabbage have been running around \$17.00 to \$20.00, with bulk stock bringing around \$16.00 or \$17.00 a ton. It is expected that movement into storage will be fairly heavy, and anticipation is for a fairly good market during the winter months.

This expectation is, of course, based on a relatively light crop. Recent reports from New York City show 50-lb. sacks of Danish selling at from 40c to 60c and red cabbage for from 75c to \$1.00.

On Tradin' Horses

About the most sensible thing I have ever read on trading horses is set forth by Doc Roberts on Page 17. Read it, for it may save you being skinned right out of your eyeteeth some time.

Growers Comment on Surplus Apple Purchases

(Continued from Page 3)

Robert Tyson and Commander Little of the F.S.C.C. office at Rochester, and it is my opinion that they are doing a good job. So long as the Corporation pays a fair price to the growers, then F.S.C.C. merely becomes another good customer, and I am somewhat at a loss to understand why an occasional grower cannot view the matter in similar light. In a surplus apple year when normal selling outlets will not absorb all of the crop, the F.S.C.C. should be welcomed into the deal and especially this year when it seems to be pretty well granted that they have paid a price to the grower which was commensurate with the going market price.

"Many growers like the fact that the Corporation's price is subject to periodical revision, and it occurs to me that this system is the fair way. Then, too, through F.S.C.C.'s apple purchases, unfortunate families on relief are not being deprived of the many health-giving qualities contained in apples."

The latest information we have on future plans is a statement put out by the Rochester office applying to the period of October 29 to November 4. This really continues previous announcements and states that the F.S.C.C. will consider the purchase of apples, paying from 55c to 75c a bushel, depending on variety and grade.

Your county committee has copies of a mimeographed sheet called "Apple Purchase Specifications." Among the specifications is one requiring that the seller furnish at his own expense official inspection certificates issued by the State Inspection Service. Another requires compliance with federal-state spray residue regulations, and states that the seller must furnish spray residue analysis certificate numbers or sign a responsibility acceptance form, copies of which are available in County Farm Bureau offices. Apples must be packed in standard bushel baskets, ring-faced, with liners and caps; or in eastern apple boxes, with net contents marked in bushels, jumble pack, with slats and covers required. Used containers are acceptable only if they are clean and in good condition.

A letter from Robert Tyson of the Rochester F.S.C.C. office says that there is no announced date for the completion of this program. It is planned to continue it as long as it appears that the purchase of surplus apples is needed to assist in the marketing of the present crop of apples. Up to October 28, 482 cars of apples had been purchased in New York State. In New York, as in some other areas where facilities are available, arrangements are being made to dry part of the apples purchased in order to provide a longer distribution period.

Keep Dairy Herds HEALTHY

By C. G. BRADT.

TWENTY YEARS AGO, probably about one-half of the dairy cattle in New York State were infected with bovine tuberculosis. Today, New York State is a "modified accredited area" with an infection of less than one-half of one per cent. What a difference this is, and what a saving this eradication of tuberculosis has brought to the dairy industry; fewer "shippers"; fewer dead cows dragged to the woods for burial and better production from those that are left as healthy. Where is the dairyman who would wish to return to the days when TB was taking its toll of cows and dairy income?

As a dairy farmer, you are interested in keeping your cattle healthy. With healthy animals, you know that your cows will live longer. Fewer replacements must be raised or purchased to maintain the herd, and healthy cows give more milk than diseased cows. Everybody wants a healthy herd. There is no argument there.

The problem is what to do to keep our herds healthy. On this question there is no easy solution. We cannot depend too much upon cures and medicines sought after the trouble has started.

Healthy Herd Program Needed

The solution to the problem of herd health as I see it is in a program of prevention on every dairy farm. This is not a simple matter any more than the breeding of good cattle is a simple matter. Extra work, much thought, good management and sound judgment will be required if a plan of disease prevention is to work, and work properly. You will not get results if you are careful this week and careless next week. The best plan of disease prevention in the world will be a failure under such conditions, unless the owner is just plain lucky and most of us are not that fortunate. Your program must be followed religiously day after day, month after month and year after year. You will succeed in the long run if such a plan is followed.

What items must be included in a sound cattle health program for a dairy farm? In the first place, our stables need to be sanitary and properly ventilated. Stall beds should be of proper size and comfortably bedded. Cows in this climate spend a great deal of their life in the barn and for this reason, stable conditions should be as near ideal as we can make them.

Second, cows must be fed properly. Plenty of good legume hays, silage and ample grain is as essential to health as to the maintenance of high milk yields. Dairy men sometimes feed for milk alone and forget that the cow has a body to maintain. The wise dairyman

will first feed for health and secondly for the milk which that cow is able to give. Vitamins and minerals are needed as well as proteins, carbohydrates and fats.

Raise Your Replacements

Another important point in our program concerns replacements. Will they be raised or purchased. I am acquainted with few herd owners who have been carrying on successful health programs that buy all of their replacements. Most of these men with healthy herds buy practically no animals except bulls. The buying of cows has ruined many sound herds through the introduction of an animal that carried disease. The raising of one's own replacements is sound in my opinion.

I believe we should have more maternity stalls on our dairy farms, in which cows may freshen. There are a number of diseases which are spread at and following the time of calving. If our cows can freshen in a maternity stall, the spread of these diseases, particularly Bang's disease is considerably lessened. Fewer calving troubles due to greater freedom for exercise is also another point favoring the maternity stall. These stalls should be thoroughly cleaned, disinfected and rebedded after each use.

The fifth point in our program might well be this one: "Immediately segregate all cows showing symptoms of ill health and keep them segregated until you are sure the ailment is not contagious." This is good insurance.

Give the "Vet" a Chance

A last point which I feel is too often disregarded, is to call your veterinarian to treat sick cows before it is too late. The proper time to call a veterinarian when something unusual is noticed, is at the very beginning. Waiting until the cow is down may be too late.

In this cattle health program which we have been discussing, practically nothing has been said about how to handle specific disease problems like Bang's disease or mastitis. A program for preventing these diseases must necessarily be based upon the nature of these two ailments. The practices which I have already cited are sound when it comes to the maintenance of general good health in the herd.

We have all seen the value of the eradication of bovine tuberculosis. We also see the importance of controlling and preventing other diseases and ailments of cattle. A cattle health program on your farm, based upon proper sanitation and sound methods of prevention will assure you a healthy herd for the future. Profitable herds are healthy herds.

MILKING
SENSATION

**IT'S THE NEW
DE LAVAL
MAGNETIC SPEEDWAY MILKER**

Tomorrow's Milker Today

THE new De Laval Magnetic Speedway Milker is here now. It's new, yet based upon tried and proven De Laval principles of milking—it's far out ahead, unequaled by any other method of milking—it's the world's best and fastest milker. New, exclusive features enable the time-tested De Laval principles of milking to be applied still more effectively—magnetic pulsation control, uniform, rhythmic, vigorous milking action . . . new tough, long-lasting Delatex rubber parts . . . new Stainless Steel Comfort Teat-Cups with easy-to-clean, Sani-Cap combination teat-cup bottoms and milk tubes . . . new Fast-Flow, streamlined, one-moving-part pulsator which never requires oiling . . . new polished, silvery, one-piece, durable, sanitary Stainless Steel Pail . . . new improved operating top with removable sight glass . . . these are just a few of the many exclusive features of this wonderful new milker. Whether you now milk by hand or by machine you have a real surprise in store for you

when you first see the streamlined black and silver, easy-to-care-for beauty of the new De Laval Magnetic Speedway Milker . . . when you first see its unequaled fast, clean milking . . . listen to its uniform, rhythmic action . . . notice how the cows respond to it . . . observe its convenience and ease of handling. And you must see and try it to really appreciate it. Your local De Laval Dealer will gladly show and demonstrate the new De Laval Magnetic Speedway Milker without cost or obligation. Get in touch with him today—or send coupon to the nearest office listed below for complete information.

NORTHEASTERN Slants ON THE National NEWS

Be Thankful That We Are at Peace

PRESIDENT ROOSEVELT'S proclamation, designating November 23rd as Thanksgiving Day, asked that on the day set aside for thankfulness, Americans give thanks because we are at peace with all countries, and "for the hope that lives within us of the coming of a day when peace and the productive activities of peace shall reign on every continent."

Not every State in the Union will give thanks on Nov. 23. Twenty-three will, but twenty-three others have decided to hold to the traditional last Thursday of the month, which this year falls on Nov. 30. Two States—Texas and Colorado—are going to celebrate both the 23rd and the 30th.

SLANT: Though States differ in their Thanksgiving Day dates, we can all go along with the President on one thing—his desire that on that day of all days we remember our great blessing of peace, and pray for its continuance.

More Aid for Drouth and Flood Areas

A HALF-BILLION dollar drouth and flood relief program in which farmers of many States, including the Northeast, are to benefit was drawn up at recent White House conference attended by committee of senators and representatives from drouth and flood-stricken areas. About 115,000 needy farm families will get help, said President Roosevelt in press conference following the meeting. Money will come from several government agencies—Disaster Loan Corporation, Commodity Credit Corporation, Farm Security Administration, and Surplus Commodities Corporation.

In upstate New York and other livestock areas, government will extend grants and loans to enable farmers to buy feed to tide herds over the winter, said the President. In Southern States hit by floods, he said, problem is to supply seed for corn and other crops.

As result of floods and drouths, rural relief load has increased from about 400,000 families to about 515,000, according to figures given out by Farm Security Administration. Increase is spread over 29 states, extending from New England into south and west into the great plains.

Food Stamp Plan Takes New Turn

SHAWNEE, Oklahoma, has been picked for government's latest experiment with its food stamp plan, which has been in operation for six months in a few scattered localities. Needy families in Shawnee, other than those on relief, are now being allowed to take part. Heretofore, only reliefers could (idea being that they use a certain amount of their relief payments to buy orange stamps, good for any food product, and receive free from government half as many blue stamps, good for purchase of surplus foods).

So far, however, only 400 takers among non-relief families have turned up in Shawnee to take advantage of government's new offer. One comment on the small number is that it may

mean a general resistance of employed persons to accepting any government aid, even though it is not tagged as "relief". A better explanation, perhaps, might be found in red tape involved. To be able to get food stamps, non-reliefers have to:

1. Have a total income of less than \$19.50 a week.
2. Buy orange stamps at rate of from \$1 to \$1.50 a week for each person in the family.
3. List all income received by the family from any source—roomers, boarders, miscellaneous home work, salaries of all workers in family, bank accounts, stocks and bonds, real estate, pensions, annuities, benefits, and cash gifts.
4. If a man owns his own business, he has to submit a profit and loss statement.

In general, food stamp plan is said to be working well among families on relief. They are reported to like it better than the old distribution of surplus commodities by state welfare board, because they can now buy a greater variety of foods. Current list of surplus commodities to be purchased with blue stamps includes: butter, pork lard, cornmeal, shell eggs, dried prunes, raisins, fresh pears, fresh apples, onions, dry beans, wheat and whole wheat flour, snap beans.

Farm Cash Income Up

SINCE AUGUST 31, day before European war broke out, prices of some of principal farm commodities such as grains, livestock, eggs, butter and cotton have advanced 10 to 29 per cent, and in most cases, except for livestock and eggs, are higher than a year ago. Market analysts are predicting that this year will see more money in farmer's pocket than in any year during past decade, except 1937. In September, after war got under way, farmer's income was \$26,000,000 better than in September 1937, and beat September 1938 by \$102,000,000.

Dr. Myers Speaks at G.L.F. Annual Meeting

AN INCREASE of 30 to 40 per cent in farm prices is needed to bring some sort of stability to the general commodity price structure, declared Dr. William I. Myers in speech at 19th annual Cooperative G.L.F. meeting, held last week in Syracuse. Dr. Myers, now head of agricultural economics department of Cornell University, is well known to farmers throughout Northeast because of his outstanding work as former Governor of Farm Credit Administration.

Dr. Myers warned that world price trend is heading downwards, and that prices in United States would follow this trend unless "we do something about our money." To prevent violent ups and downs in price level and in business activity, he urged a change in nation's monetary policy, and said that the drive for this change must come mainly from farmers because they are the largest group concerned with the problem.

Speaking of effect of Europe's war upon prices in this country, Dr. Myers predicted that, if war continues, there will be further price increases, but he advised the 3,000 G.L.F. committeemen and stockholders at the meeting against speculation or drastic changes in farms or farm cooperatives. However, to young men who are thinking

of starting in farming, he spoke these encouraging words: "This is a good time for a young man to start farming on a good farm, provided he has experience and training and a reasonable equity to enable him to weather possible bad years."

Farm Credit News

OF \$3,815,000 in credit now being used by farmers' cooperatives throughout Northeast, only 4% was delinquent on September 30, reports George W. Lamb, president of the Springfield, Mass., Bank for Cooperatives. Operating in New England, New York and New Jersey, bank has loaned \$15,500,000 to 141 farmers' cooperatives in past six years, and co-ops have repaid all but present balance. Co-ops used this money to finance construction of plants and warehouses, to make advances to members on stored crops and commodities, and for operating capital.

For entire U. S., 13 Banks for Cooperatives have financed 2,400 farmers' cooperatives in past six years.

FARM MORTGAGE DEBT SHRINKS

Total U. S. farm mortgage debt is smallest it has been in 20 years, according to official figures. In the past two decades, mortgages shrunk from 11 billion dollars to 7 billion, partly from foreclosures which wiped out mortgage liens, but more in recent years from repayments.

Unlike the rest of U. S., New England showed an increase in loans during 1936, 1937, and 1938.

SLANT: Yankee farmers weren't mortgaged to the hilt, therefore could put on additional mortgages if they needed to, as apparently they have. Don't forget, half of Northeast farms have no mortgage.

FARM CO-OPS GOING STRONG

"From the standpoint of membership, dividend payments and financial condition," says S. D. Sanders, cooperative bank commissioner, "agricultural cooperation in the United States appears to be in a stronger position today than at any time in its history. They are performing more efficiently in serving their members, who, of course, are the owners of the business."

"From information gathered by the banks for cooperatives, there are some 15,500 farmers' cooperative associations and mutual companies in the U. S. Gross business of the marketing and purchasing associations, including both wholesale and retail sales, aggregates \$2,750,000,000 annually. Nearly half of all American farmers are now marketing farm products or purchasing their farm supplies, insurance, or farm business service through cooperative farmer-owned organizations."

War News

EXCEPT for submarine warfare being waged against British Navy by Germany, the European war has been marking time, with little happening in the way of land fighting. Most important news of fortnight has to do with three important neutral nations, United States, Italy, and Russia.

ITALY

In sudden shake-up of Italian Cabinet and Army, Premier Mussolini removed three military chiefs, two cabinet members and several other officials, supposed to be pro-German. Move is considered important because it looks as though Italy now definitely intends to remain neutral, and to back out of her promise of military assistance to Germany if that country asked for it. Said to be pleased with changes are

the Italian people, who have never cared much for their German neighbors.

RUSSIA

One of big surprise packages of this war has been Russia, which did a complete right-about-face when it made a friendship pact with Germany. Since then, it has been moving fast to grab advantages for itself, taking part of Poland and forcing small Baltic countries to give it privileges which make those countries practically dependent upon Russia.

Last week, Russian Foreign Minister Molotoff made a long speech in which he warned Finland to accept Russia's terms; criticized President Roosevelt for putting in his oar in connection with Russia's demands on Finland (President had sent a note asking that Finnish independence be safe-guarded); denounced Great Britain and France for making war on Germany; said that Poland could never be restored; and declared that German and Russian relations are getting better and better — BUT did not promise the Germans any actual military aid. For this reason, it is believed that Russia intends to stay out of the war.

UNITED STATES

In this country, interest has centered in two things: Capture and fate of American ship, *City of Flint*, and its crew; and, second, the progress of neutrality bill through Senate and House.

City of Flint — Ship was taken by Germans as a carrier of "contraband", and piloted into a Russian port, where it was interned a few days. Protests of United States caused Russia finally to free the ship. However, it was allowed to sail away in command of German crew, with American crew of 40 held as prisoners. Ship was reported to be enroute from Norway to Germany. Tables were turned by Norway when it arrested and interned German crew and turned the vessel over to its American crew after the Germans had entered a Norwegian harbor contrary to international law. With Stars and Strips once more at its mast head, *City of Flint* is reported to be about to sail back to U. S.—if nothing more happens.

Neutrality Bill—Senate, after weeks of debate, voted 63 to 30 in favor of bill containing three important provisions: (1) Lifting arms embargo; (2) Forbidding American travel and American shipping in active war zones where there is danger of their being seized or sunk; and (3) Putting munition sales to belligerents on a cash-and-carry basis. Senate bill was then sent to House, which sent it to a conference committee after voting 243 to 181 in favor of repealing of arms embargo and approving the cash and carry system. **SLANT:** It is expected that this law will go into effect within a few days—and the sooner the better at least as far as provision which forbids American ships to enter war zones. If this had been enacted into law earlier, the *City of Flint* and its crew would not have been in grave danger. When we allow American ships to carry contraband of war into danger zones, we have to take the consequences.

Indians Believed in Soil Conservation

SEVEN HUNDRED years ago, prehistoric cliff-dwelling Indians in Colorado practiced soil conservation, according to discoveries made through surveys by National Park Service in Mesa Verde National Park. Found were hundreds of check dams, built to add to the Indians' available acreage of tillable land. Dams were constructed where they would catch the fine, rich earth deposited by run-off of sea-

sonal rains, which gradually filled them to the top. This, say the scientists, resulted in hundreds of small plots of rich soil, each capable of growing a few hills of corn, beans, or squash. Modern Hopi Pueblo Indians of Arizona still practice this type of terrace farming.

What the Farmer Gets

OUT OF each dollar spent by consumers for 58 foods in first seven months of this year, the farmer got about 40 cents. This figure comes from United States Department of Agriculture, which also reports that farmer's share of consumer's food dollar rose from a low level of 35 cents in 1932 to 45 cents in 1937. Although farmer's share of consumer's food dollar has jumped up and down during past four years, Department points out that farm-to-retail price spread has remained remarkably stable.

New York World's Fair Closes Up

AFTER PLAYING to over 25,000,000 paying customers since last spring, New York City's big show has shut down until next year, when it hopes to make the Fair more of a financial success. In spite of large attendance, it was less than half that was expected, and less than needed to make the Fair a paying proposition. Special efforts, it is being announced, will be made next year to correct poor showing of amusement area, as Midway did not do so well. One trouble with it was that fascinating commercial exhibits made it take second place. For once, fan dancers, fat ladies, freaks, and roller coasters found that they couldn't lure the crowds away from wonders of industry, commerce, and science.

Good Books to Read

JOURNEY PROUD, Thomasine McGehee. In this novel, fifty years of Virginia tradition and atmosphere are set before the reader, and the personalities are sketched with skill and care. Two of the great Virginia tobacco plantation families are united through marriage. Then comes the decline of the Virginia gentry, the Civil War, and the younger generation face an entirely different world from that of the past.—*MacMillan Company, New York. \$2.50.*

STRANGER WITHIN THE GATES, Grace Livingston Hill. A bolt from the blue comes to the Garland family when a note from the 18-year-old son Rex announces his marriage to a stranger. This happening just before Christmas brings consternation to the family circle, and Mrs. Hill has written a charming and sympathetic story.—*J. B. Lippincott Company, Philadelphia, Pa. \$2.00.*

Good Movies to See

MR. SMITH GOES TO WASHINGTON. One of the most interesting movies of recent times. The background of the Senate Chamber, where most of the story is played, is authentic, and against this background is shown the story of young Jefferson Smith, appointed to a vacant seat in the Senate by State politicians in need of a stooge. From this seat young Smith exposes grafters, combats treachery, and emerges a national hero. Said to be the outstanding picture of the year. No one should miss seeing it.

HOLLYWOOD CAVALCADE. Back to the days of the beginnings of moviedom goes this hilarious story of the history of movies from their infancy to the arrival of sound. There's plenty of pie-throwing, and included are the Mack Sennett Bathing Beauties, the Keystone Cops, and other stars dear to the hearts of early movie fans.

"THAT'S OUR RING"

There's always some one to talk with when there's a telephone in the house. Neighbors and relatives are closer. Friendly calls lead to friendly visits. Even when winter lays down its barrier of snow and ice, there's a welcome "Hello" waiting at the other end of the line.

NEARBY MARKETS for NEARBY POULTRYMEN

A Ray of Light

By J. C. HUTTAR

EVER since the middle of the summer when the heavy market receipts of fresh eggs and heavy reserves of cold storage eggs combined to keep egg prices from advancing as fast as our hens were dropping in production, poultry keepers have felt the pinch. The size of the egg check has been going down but the size of the weekly feed bill and other expenses did not drop. This situation became suddenly worse about a week after war broke out in Europe. War quickly boosted feed costs and for a very short time boomed egg prices too. Things actually looked brighter for the poultryman for a few days. But then the bottom dropped out from under eggs but not so fast from under feed

J. C. Huttar

prices. So, with production still dropping off, the pinch on the egg producer got worse.

With reports of more hens in the country, feed prices promising to hold at a higher level than last year and city buying showing very little improvement as yet, the outlook has certainly not been bright. In my last article I did my best to point this out and give some suggestions on what might be done to meet the situation. I still stick by my suggestions on the only way to meet a bad poultry situation, but I wonder if I can't become a little more optimistic than I was then.

A Market Saying

There's an old saying in the egg market among the veteran dealers which says,—if things get black enough they'll get better soon. Of course, they're in the dumps now, too, because they own this load of eggs which are in the warehouses. Right now the average cost of these eggs to them is 2 to 4 cents a dozen more than they can get for them.

Earlier this week I conducted a tour of poultrymen from Wayne County, around the New York poultry and egg markets. When we visited the live poultry market every dealer we talked to mentioned the fact that there were a lot of hens coming to market. I see that prices of fowls are running 3 to 5 cents below last year.

Then when we went around the egg market the story was that fresh egg receipts were very light.

Putting two and two together, I decided to look into the thing a little to see if the situation was changing any.

I'll give you what I found and then my own conclusions. See how they compare with yours. I'm warning you though that I'm giving it to you in figures, so here it comes.

Hen and Egg Marketing

There are three principal egg sections in the United States. They are—the Midwest which is the largest, the Pacific Coast and our own Northeast. From all of these the federal government collects figures every week at the primary collection points. These figures are good indicators of total production and marketing for the areas.

In the table below you see the size of these collections for each area compared with last year. Figures represent per cent higher or lower than last year. If the collections are heavier this year the figure is a plus, and if smaller, a minus.

Week Ending	Midwest	Pacific Coast	Northeast
Sept. 2	+13.8	-5.6	+30.2
9	+5.5	-2.7	+26.4
16	-4.1	-0.7	+25.2
23	-8.5	+1.4	+31.2
30	-18.6	+1.4	+32.1
Oct. 7	-31.2	-0.8	+39.5
14	-31.2	+1.6	+45.7
21	-29.4	+5.5	+35.5

It appears that Midwest production about two months ago was running ahead of last year but since then has dropped further and further behind. Pacific Coast production seems about the same as last year and here in the Northeast it runs consistently heavier, but might be slackening some.

To measure this all together, the only figures I can get are the receipts of eggs in a large market like New York. Here are the figures expressed in thousands of cases.

Week Ending	1939	1938
Sept. 2	187	158
9	174	145
16	169	164
23	176	161
30	155	136
Oct. 7	133	142
14	125	145
21	117	135

From these figures it seems that total production of the country is falling

much faster this year than last.

Now the question is—Is it because farmers are selling hens faster or have they quit feeding them?

The only thing I could find, in addition to what the poultry dealers told us this week, are the government's figures on receipts of hens at the Midwestern poultry packing plants. Here are the figures.

This table again gives the per cent increase or decrease compared with last year.

Week Ending	Hens	Receipts of Young Stock
Sept. 2	+6.6	-3.2
9	-10.3	-26.2
16	+10.2	-17.1
23	+19.2	-5.0
30	+47.8	+1.0
Oct. 7	+37.2	-7.6
14	+17.0	-19.5
21	+12.8	-13.9

This seems to say that hens are being sold off faster this year than last.

Finally, what is the story on cold storage holdings of eggs. Well, I won't give you another set of figures. It's enough to say that in the 35 biggest markets of the country during this period from September 2 to October 21 the storage surplus over last year has dropped from 423,000 cases to 252,000 cases.

One Man's Opinion

My interpretation of these figures is this. The poultry picture has brightened up a little. The extra birds raised this year may be sold off before the year is over. Buying power is improving slowly. So I see a ray of light, do you?

BUT STILL REMEMBER TO PRODUCE ECONOMICALLY AND CULL YOUR HENS CLOSELY. Also order next year's chicks on a production and livability basis and not on a price basis.

I am sending you an egg which was laid by a blood-tested New Hampshire Red hen. The egg weighs 4 oz., and it measures 6½ x 7¾. It is the largest hen's egg I have ever seen.—William Van Alphen, Box 258, Hillsdale, New York.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912 AND MARCH 3, 1933.

Of American Agriculturist, Inc., published every other week at 10 N. Cherry Street, Poughkeepsie, N. Y., for October 1, 1939.

State of New York, County of Tompkins, ss.

Before me, a notary public in and for the State and county aforesaid, personally appeared E. C. Weatherby, who, having been duly sworn according to law, deposes and says that he is the Secretary-Treasurer of The American Agriculturist, Inc., and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, as amended by the Act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, American Agriculturist, Inc., Ithaca, N. Y.; Editor, E. R. Eastman, Savings Bank Bldg., Ithaca, New York; Managing Editor, None; Business Managers, None.

2. That the owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member must be given.) American Agriculturist Foundation, Inc., Ithaca, N. Y. (A non-profit membership corporation without capital stock).

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is (This information is required from daily publications only.)

E. C. Weatherby, Secretary-Treasurer.
Sworn to and subscribed before me this 20th day of September, 1939.
(My commission expires March 30, 1940).
(Seal) Adelia M. Senecal.

NEARBY MARKETS for NEARBY POULTRYMEN

Winter Poultry Chores

By H. L. COSLINE

WINTER winds will soon be howling around laying houses, bringing with them some changes in the poultry keeper's routine. One of the most troublesome problems to many poultrymen is that of keeping the house dry. Fundamentally a well ventilated house is a dry house, and if the litter gets damp quickly it may point to the necessity of remodeling the ventilation system.

In the meantime, there are several things that can be done. The litter can be changed as soon as it gets damp, but this is costly both in material and in time and should be regarded as a stop-gap rather than a cure. By all means see that there is no drip onto the floor from water fountains. It is most important to manage what ventilation facilities you have so as to make full use of them and to secure an exchange of air without drafts.

By the way, if you are troubled with a damp house, write *American Agriculturist*, Box 367, Ithaca, N. Y. Give us a full description of your house and we will be glad to offer suggestions.

Drinking Water

In proportion to its importance, the question of drinking water is given too little attention. If it comes to a pinch, a flock of hens can get along without feed a longer time than they can without water. Water makes up a very large percentage of the egg, and any interruption in supply will be reflected in lower production.

So far as I can find, there is little advantage in having water too warm, but it is essential to have fresh, clean water available all of the time. If your house is so cold that the water buckets freeze and if you do not get out to take care of them until an hour after daylight (or in case you use lights, until some time after the lights are on), it is going to cost you money in lower production.

The most effective way of handling the problem is to have water warmers, and if your houses are wired for electricity, the simplest way is to use an electric water heater. These are available from several manufacturers. If you don't know where to get one, drop us a line. Also on the market are oil burning water heaters. Heaters may not be necessary if you have a good supply of running water with an overflow provided to carry the excess water out of the building.

Dumpy Hens

Sometimes when I go into a poultry house in the winter, I find half the hens on the roosts with their heads drawn down between their shoulders as though they had no interest in life.

"Can you imagine that agent trying to tell us this place is haunted, dear?"

Production from these hens is always small. One cause of such apparent laziness is a damp house. Another is raising a bunch of pullets of low vitality, and if that is your trouble, there isn't much to do except to get rid of them. On the other hand, these hens may be sick or have their vitality sapped by internal parasites.

The first chore, of course, is to find out what is wrong. If the hen is sick, you can send her to your State Veterinary College, or if you are lucky enough to have a local veterinarian who has made some study of poultry diseases, take a hen or two to him and have him make a post-mortem.

Another aid to activity is feeding some green feed. A head of cabbage or a beet stuck on a nail will keep them interested. Or you can have wire baskets in which you can put leafy second-cutting alfalfa hay from which the birds will pick the leaves.

Weight Losses

A slump in production is almost always preceded by loss in body weight. The best way to guard against this is to mark half a dozen pullets in each pen and weigh them once a week. If there is any loss in weight, you can take steps to increase feed consumption before the damage is done. A real poultryman—one who likes chickens—will spend a good part of each day in the poultry house.

Figures

Long winter evenings give more time for keeping accounts, although to be really valuable figures on your flock have to be kept the year around. I could never see too much value in poultry records consisting only of a record of feed costs and egg receipts. To be sure, it will tell you whether or not you are making money, although even on this point the figures may not be conclusive if your inventory has changed much. The real value of poultry accounts comes from figuring egg production per bird, feed costs per bird, percentage of mortality, and items of similar nature.

Reading

Winter evenings give the opportunity to brush up on available facts about poultry keeping. In these days every poultryman needs a few good books. A new book is not necessarily good, but in general it is unsafe to bank too much on information contained in books written 15 or 20 years ago.

There are also available without cost many poultry bulletins from your State College of Agriculture. If you don't have them, write for copies and keep them on file for reference. Bulletins published by colleges of agriculture in other states are usually available at a small cost, ordinarily 5c each, and the same is true of bulletins published by the United States Department of Agriculture. By appealing to your Congressman at Washington, you may get these U. S. D. A. bulletins without cost, but anyway the charge is small, usually 5c a copy. Write the Division of Publications, Office of Information, U. S. Department of Agriculture, Washington, D. C., for a list of available bulletins.

It would be comparatively easy for any poultryman to lay out a definite course of study for winter months. To a large extent, successful poultry keeping is a question of continual attention to a mass of details, any of which may seem relatively unimportant but which, taken together, spell success or failure.

"Isn't it a fact —"

**DOWN THE
Alley**

By J. F. (DOC) ROBERTS

IF YOU look younger with your hat
on, you have a love for the horse
that is still with you. You probably
rode to church with your Grandfather
in the phaeton, drawn by "Old Nell" or
"Old Tom". You were "made to under-
stand" just how important and fine
those two horses and the "colt" (then
about 10 years old) were to the old
gentleman and Grandma. If this brings
back memories, you were brought up
in an age that loved the horse. A great
many of us still do.

But horses are still "big business",
with between 15,000 and 20,000 mov-
ing through Buffalo alone each year,
and if this war goes on for three or
four years, with its call for oils, gaso-
line, engines and steels, it will be big-
ger. It seems to me that I can remem-
ber 32c gasoline and \$1200 Fords dur-
ing the last war. Maybe foodstuffs will
go up accordingly, but it is something
to think about before completely turn-
ing away from horse farm power.

Horse "tradin'" is still a perilous
occupation, because no matter how
good a "trader" may be, he is sure
to run up against somebody just a lit-
tle bit better. In this day and age, it
is not so much a matter of "tricks" as
it is a study of human nature at its
worst, so the average man hasn't a
chance. Therefore, if you have a horse
or horses to move, don't trade them

E. R. STONE & SON
CLYDE, NEW YORK

in, or trade at all. Sell them in your own neighborhood "for what they are worth", no matter what that is, and then take the money and buy your horse or horses.

Horse "buying" is not so difficult, unless you undertake to buy at one of the rapid-fire horse auctions. There again, the average man hasn't a chance, because the seller knows what he has and he will see to it that you do not have an opportunity to find out.

NEVER buy a horse that you haven't had your hands on. Feel his neck for soreness, swellings, scars, and be very careful if his mane is shaggy and thick at the top of the collar. Feel his shoulders; they should be smooth, not hollowed (sweeney), and not soft (blown up). Pick up his front feet if you can; if you can't, look out. NEVER buy a horse with a cloudiness in his eyes, or white spots, or that has not a very clear, open, quiet eye, for horses' eyes, like with us humans, can show disposition, habits and nature.

NEVER buy a horse that you haven't seen hitched under unusual and trying conditions, and well-winded. Any noise in breathing after a pull or a run is not just a cold or a thickness; it is bad wind. Look out for so-called wire-cuts or cork cuts and scars just above the hoof. It may be sidebone or ring-bone camouflaged; and, of course, watch for puffs, swellings or any unnatural protuberances on hocks, knees, or in fact anywhere.

NEVER buy an off-gaited horse — paddler in front, short-going in front, or too narrow-going or wide-going behind. As they get old, this always gets worse. Last and most important, if you are not a horseman, take him home and try him for a few days or a week before putting out ANY money.

Wins Jersey Calf

BARBARA MARTIN, a 13-year-old farm girl of St. Albans, Maine, was the winner of the Jersey Jingle Contest conducted by the American Jersey Cattle Club. Barbara wrote the last line of the following limerick:

The Jersey cow is the all-star breed,
More cow to milk, less cow to feed,
Efficiently streamlined
To give milk that's creamlined
Less cost—more profit, is her creed.

As winner, Barbara had her choice between a purebred Jersey calf valued at \$150 or an all-expense trip to the

1939 National Dairy Show at San Francisco. It didn't take her long to make her choice.

"I'll take the calf," she decided. "You see, I'd like to be a Jersey breeder and have a high producing herd of my own. This prize will give me a good start. Then, some day my cattle will pay my way to the national show. Maybe I'll even be able to show my Jerseys on the big circuit. I'm starting next year by showing my prize calf at the county and state fairs."

Barbara is a student and a member of the home economics class at Hartland Academy.

The only other winner in the Northeast was Wallace H. Luce, White River Junction, Vermont, who was among those selected for honorable mention.

SULFANILAMIDE

Veterinarians are finding Sulfanilamide of value in treating disease in cattle. We have prepared a booklet on this subject which will be mailed to any veterinarian on request.

Reduce Swelling Quickly!

**DIRECT relief
keeps Horse fit
for Hauling**

Absorbine eases strain quickly

SWELLING of the fetlock is a danger signal! Often it means the horse has suffered tendon and ligament strain. Apply Absorbine the instant you detect it. It sends relief direct to the sore area. Increases the blood flow through the injured part to carry off congestion more quickly. Absorbine helps to keep your horse working. Will not blister. Many veterinarians have used it for over 40 years! At druggists. \$2.50 a bottle. W. F. Young, Inc., Springfield, Massachusetts.

—ABSORBINE—

For relief of Your Own Strains, Muscular Aches and pains, use Absorbine Jr.

Real Health Economies

by
MRS. GRACE
WATKINS
HUCKETT

SOMETIMES what is intended as a saving turns out to be false economy. This seems pretty true in health matters. Take shoes, for instance. There is always the temptation to use, while working, any old shoes which we happen to have. Yet I know from my own experience that rundown heels or old high heeled shoes cause leg and back-aches and worse, because they throw the whole body out of line.

Broad heels, not more than $1\frac{1}{4}$ " high and well-rubbered, do wonders at all times of the day toward giving the foot proper support and preventing unnecessary jars of the body. A poorly fitted shoe is never an economical one at any price. Shoes that are too loose are just as bad as those that are too tight. The right shoe fits closely in the heel, supports the arch comfortably, allows toes to stay in their natural position, and is 1" longer than the foot.

Even stockings must be considered in any health economy program. Too short stockings crowd the toes, and if too narrow in the leg are apt to bind just above the knee, thus slowing the circulation. They should be bought $\frac{1}{2}$ inch longer than the foot.

Another place where women are tempted to save is on foundation garments. Many either go without while at work, or use a garment which no longer gives proper support to the body. A well-fitted one supports the bust, and, in the case of large women, the abdomen as well, thus relieving much muscle strain across shoulders and back. It is not merely a matter of how you look (though that in itself is pretty important), but a good foundation garment certainly helps to prevent weariness or illness due to poor posture. The length of hose supporters alone may make the difference between a comfortable or highly uncomfortable day. If too short, they drag the garment down and put harmful pressure on internal organs. Oftentimes it is not the matter of extra money spent, but of a few moments taken to adjust either shoulder straps, supporters or fasteners. With a little experience one could even fit a garment

to her own figure to make it give better support.

And did you ever try to do a big day's baking while wearing a dress too tight in the armholes, or too narrow across the shoulders? This is one of the unnecessary daily frictions which wear a woman down. Here it need not be a matter of dollars and cents, but of a few moments ripping and sewing. Work dresses with plenty of freedom for arm and leg action are just as important as good work shoes.

Perhaps one of the greatest changes in clothing during the last generation has occurred with regard to underwear. There is no doubt that some have gone to extremes on that subject — witness the scant underwear of the school girl! Even so her skin is no doubt healthier and more active, and therefore more able to adjust itself to extremes of temperature, than skin which is shrouded in heavy, thick, non-porous underclothing, one of the commonest causes of winter colds. It seems to work better to wear clothing which is suited to the warmest place one will be most of the time, and to have at hand a sweater, jacket, or coat to slip into quickly when going into cool atmospheres. Often a smock is all that is necessary for this purpose.

There are some vital health economies that do cost money, but if taken early they cost less than if neglected. I refer to eyes and teeth. Poorly-fitting glasses or decayed teeth, if neglected, prove far more expensive than if cared for in time to prevent permanent trouble. Regular inspection of both eyes and teeth is a saving in the end.

Speaking of ventilation for the body skin, it is equally important to have

When gardens go and winter comes, don't cut out entirely certain fresh fruits and vegetables, even if you have to buy some of them. They are important members of the "protective foods" family, and rank among the real health economies.
—PHOTO COURTESY OF NATIONAL DAIRY COUNCIL.

fresh, moist air to breathe. Whatever the heating system may be, it ought to provide a supply of fresh, warm, moist air sufficient to prevent undue drying out of the body linings, another common cause of winter colds. A pan or kettle of water on a stove, a water pan in the furnace or on the radiator, is not expensive, yet corrects extreme dryness. It may take some ingenuity to arrange for ventilation without drafts; a board or piece of plate glass fastened across the window sill turns cold air upwards when the window is raised slightly from the bottom. Another device to provide ventilation without draft is the cloth or metal screen. They are inexpensive and adjustable to fit windows of different sizes. Of course, an air conditioning system is ideal but most of us have to do our own conditioning.

Another health economy is an investment in the "protective foods". The protective foods are the dairy products, eggs, green and yellow vegetables and to a lesser extent, meats. Naturally some of these foods are more expensive in winter when the local supply is scarcer, but even so they prove a saving in the end because they supply certain essential nutrients which are not obtainable in cereal grains, peas, beans, sugar, vegetable fats, etc., which constitute the bulk of our diet.

Recently a study was made of 25,000 representative families of the United States to see how the family food rated nutritionally. One of each five families, the study showed, was getting a diet which, if continued over a long period of time, would undermine health and lower resistance to disease. The amount of money spent was not always the determining factor as to whether the diet was all it should be; rather it was the choice of food which the homemaker gave her family.

This study only emphasizes the fact that homemakers must know food values, know which foods are economical and reliable sources of vitamins, minerals, protein and energy. The average diet, particularly in winter, commonly has more protein and energy foods than the important minerals and

vitamins which are provided by the protective foods. In a dairy country it is cheering to know that milk contributes more to good nutrition than does any other one food. It is the best source of calcium; without milk it is difficult to get enough calcium for building strong bones and teeth and for prolonging a high level of health. Milk is also a good source of phosphorus, of proteins of good quality, and of vitamins A and G. So for your health's sake, don't scrimp on milk!

Nor is it true economy to omit the leafy green and yellow vegetables in winter because they may have to be bought. Incidentally, green rather than blanched vegetables are richer in vitamins. To get the most vitamin nourishment from vegetables for your money, time, and work, eat raw cabbage, carrots, lettuce, fresh, frozen, or canned peas (not dried ones), sweet potatoes, spinach, tomatoes in any form and turnips. Eat fruits and good servings of four different vegetables from this list every day and you won't have to worry about vitamins. Other vegetables which are fairly good sources of the common vitamins, except D, are beets, cauliflower, cucumbers, onion, pumpkin and rutabaga.

As for needed minerals, you will get them if you eat freely of the following foods—milk, vegetables, fruits, lean meats, and fish or eggs. Potatoes, by the way, are a good source of iron, because of their cheapness and because they are eaten daily.

Pictured on this page is a pattern diet which it will pay to follow day by day: Milk, one quart for children, and one pint at least for adults. Vegetables, two or more besides potato, green or yellow preferred. Fruits, two or more servings, one citrus or tomato. Protein foods, at least one serving, or additional milk. Eggs, twice or more weekly. Cereal grains, at least one serving of whole grain variety. Fats, enough to lend palatability and staying quality to meals. And sufficient other food, such as additional bread and cereals, and wholesome sweets, in the form of simple desserts, to make enough total energy.

Send for This Leaflet!

BESIDES the brief discussion on this page of vitamins and minerals needed in the diet, Mrs. Hockett has prepared a mimeographed bulletin, entitled "The Protective Foods", which gives further information on this important subject, as well as sample menus. If you want a copy of this bulletin, write to Home Department, *American Agriculturist*, Box 367, Ithaca, N. Y. To cover mimeographing and mailing charges, please enclose three cents, or a three-cent stamp (loose or clipped to your letter.)

Thanksgiving

By ROBERTA SYMMES.

I'm thankful for the blessings of the dawn
That come so rosily when stars are gone;
For all the busy hours of the day,
And peace that hovers in the twilight gray.

I'm thankful for the fire, warm and bright,
That on my home-hearth Thou hast kept alight;
An altar fire it has proved to be,
Burning with love and gratitude to Thee.

I'm thankful for the bounty Thou hast lent,
The spirit Thou hast given of content.
Through all the coming days, Lord,
let me prove
More worthy of the blessings of Thy love.

headsize and must be ordered separately.

GIRL'S PAJAMA PATTERN NO. 2971 is just as smart as the one big sister wears. Useful for everyday or for gift use. Size 8 requires 3 yards of 39-inch material, 1½ yards binding for featured version.

BUNNY SLIPPERS PATTERN NO. 2763 also includes ladies' folding slippers and case as shown in our last issue. Sizes are small, medium and large. Medium size includes ladies' slippers and case size 7; girls' slippers, size 11.

TO ORDER: Write name, address, number and size plainly and enclose 15c in stamps and send to Pattern Department, *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y.

Johnny's Chance Comes Thanksgiving Day

Not long ago we ran a little news item about Johnny Steinbrugger, telling how he had hitch-hiked clear across the continent from California to get on Major Bowes' program. Johnny, you'll remember, is the kid who has had 21 operations, and who in spite of them has learned to dance in a way that some day may make him famous. If that day ever comes, Johnny insists he is going to realize his dream of owning a farm.

Johnny, who is now 14 years old, writes us that he has finally had word that he is to be on Major Bowes' radio program on Nov. 23, Thanksgiving Day.

"Don't you feel inside," says Johnny, "that God is giving me my chance to be thankful on *His* day? If opportunity (Johnny never was a good speller) comes to me after the Major's program, some day I'll have a real dairy. I'll have a contented herd even if I have to dance my feet off to keep them so."

"I can hardly believe I'll be on the air by Thanksgiving. Boy, I wish it was over. If I fail—well I can still get a calf and raise some chickens. But, say, when a kid has a swell Mom and Dad, a lovely sister and a brother, and two swell mut dogs, and you're an *American* with unbounded opportunities, a fellow only has to *half* try to succeed."

Well, *American Agriculturist* folks certainly wish Johnny all the luck in the world when he appears on Major Bowes' program on Nov. 23, and we know that all of his *American Agriculturist* friends do, too. Listen for Johnny that day (9 to 10 p. m., Columbia Broadcasting Station), and vote for him. A boy who has overcome as many obstacles and as much hard luck as Johnny has deserves to succeed. Johnny says he will be introduced on the Major's program not as Johnny Steinbrugger, but as "Johnny, the kid who came back."

Rubber Bands for Applying Pressure

I keep handy a dozen or so rubber bands cut from old inner tubes for applying the necessary pressure in cementing or gluing irregular surfaces, such as chair legs, dishes, etc. I find them quick and very effective for such work.

AUNT JANET'S Favorite Recipe

WITH Thanksgiving at hand, it is fun to give the pumpkin pie a festive touch. Make individual tarts by putting the crust on inverted muffin tins and baking until barely brown. Fill the shells with the pumpkin mixture and cook as directed below. Top with whipped cream before serving.

Pumpkin Pie

1½ cups cooked and sifted pumpkin	¾ cup sugar
1 cup milk	2 tablespoonfuls molasses
½ cup cream	½ teaspoonful salt
2 eggs, separated	1 teaspoon ginger
½ teaspoon allspice	1 teaspoon cinnamon

Beat egg yolks and whites separately. After mixing all other ingredients, fold in the beaten whites and bake in a moderate oven (350°) until firm.

Here's what is happening to the Cranberries

you read about in the last issue of *American Agriculturist*

They've been harvested . . . and canned . . . ready for your Thanksgiving dinner.

If you've never tried Ocean Spray Cranberry Sauce before, do try it now. It's a *jellied* Cranberry Sauce, ready to serve, and selling today at so low a price you'll want to stock up for winter.

Ocean Spray Cranberry Sauce contains no artificial coloring, no added pectin, no preservative. Just selected cranberries cooked with pure white sugar and water—and skins and seeds removed. It's *jellied* ready to . . .

Open

Slice

and Serve

Ocean Spray Cranberry Sauce is packed by the cranberry growers of Cape Cod and New Jersey

The "Road-Measurer"

PART I

AT FIRST SIGHT no one could possibly have guessed what it was, or what the young fellow who wheeled it was doing. It looked a little like a wheelbarrow, only the wheel was twice as large, being nearly four feet high, and of much slighter build. It also had two arms like a wheelbarrow, but the arms were far lighter and longer. Connected with the axle there was a little box with a glass lid, and on the other side of the wheel another larger box with a cover and padlock. The whole contrivance would hardly have weighed more than thirty pounds, and to wheel it was mere child's play.

A lawyer and an editor invented it—Lawyer Huntley at the village, seven miles from the old squire's farm, and Editor Rastwell of the Pine State Gazette. Times were a little dull that season—1869—for both of them; it was an off year, politically. So they took thought in a public-spirited way and hatched a scheme for getting up a county map and real-estate atlas, the idea being that all the well-to-do people thereabouts would buy a copy at six dollars.

But to draft their map accurately they needed more exact measurements than were then in hand, as to the principal highways of the county. They therefore set their wits to work and invented this "road-measurer", as they called it. It was a sort of cyclometer.

It would have saved much slow foot-ing it about if they had attached their distance-recording gear to the axle of a light road wagon; but perhaps they did not think of that. Their road-measurer had to be wheeled like a wheelbarrow by a person on foot, who made notes of the distances and the relative location of the farmhouses and other property—plotting the map roughly as he went on. To do this required very careful attention to the task, also a good eye and fidelity to the object in view. Neither the lawyer nor the editor had any great liking for such painstaking details, or for so much long, hard walking. What they wanted was a young man on whose accuracy they could rely and whom they could trust to do the right thing; and after casting about, they came up to the old squire's one evening and offered the job to my cousin Addison, who was then about eighteen years old.

Mr. Huntley introduced the subject of the map, and finally offered Addison a one-fourth interest in the prospective profits if he would do the necessary work with the road-measurer.

We had finished haying and grain harvest. Addison could be spared. Moreover, this was the kind of thing that always suited him pretty well. But he was a cautious boy. He thought over Huntley's proposition for an hour or more, figured up some four hundred miles of road to be measured, then got the old squire's advice, and offered to do what they wanted for the quarter-interest as proposed and a dollar and a half a day additional.

The lawyer declared this to be impossible, and he and the editor went away, taking their invention with them, but returned two days later, and after some further discussion, came to an agreement, Addison reducing his cash demand to a dollar and a quarter a day.

Addison had to bear all his own expenses while travelling; but he hoped to clear a dollar a day by taking a basket of cooked food with him from home, and stopping overnight at farm-houses where in those days the charge for lodging was but trifling. The road-measurer, with all that appertained to it, was entrusted to him; and the next morning we all turned out to see him

start off with it.

It was August, and as hot days were to be looked for, Addison put on an old cork helmet, which contributed to the outlandish aspect of the entire rig. We all laughed, I remember, when he picked up the "arms" of the road-measurer and walked off—the big front wheel turning lazily and that droll little clicking noise muttering to itself inside the box on the axle.

And if the contrivance looked queer to us, who knew about it, it was ten times more an object of curiosity to strangers whom Addison met on the highway.

This, indeed, was a phase of his new job which Addison had not reckoned on—the curiosity of the public.

Everybody whom he met stared first at him, next at the road-measurer; and then it was, "Say, you, what d'ye call

By C. A. STEPHENS

that machine?" or, "Hello, young fellow, where you going with that queer wheelbarrow?"

On account of his two boxes and the basket of food, some took him for a pedler, and pulled up to ask what he had to sell.

At first this merely amused Addison. He stopped and explained it all at length to them. By the time he had done so half a dozen times, however, it began to grow monotonous. He soon found, too, that so many delays would prevent his making satisfactory progress.

He grew weary of answering the same questions over and over. "Can't stop! Can't stop!" he exclaimed. "I'm in a hurry!"

"Sho!" "Do tell!" "You don't say!" retorted the curious ones; and a muscular youth whom Addison advised to attend to his own affairs offered to stop and give him a lesson in politeness.

"Can't you answer a civil question?" said he. "Tell me to mind my business again and I'll smash that jig-a-maroon for you!"

Addison took second thought, and to

the next person—an old farmer with a skittish mare—who pulled up to inquire, he said, "This is a jig-a-maroon! I'm grinding coffee with it! Don't stop me!"

The farmer's grin vanished in a scowl. "By gum!" said he, and grabbed for his whip. "I dastn't leave my mare unhitched, or I'd dust your jacket for ye!" Evidently public curiosity has rights, or thinks it has, and the pursuit of knowledge by asking questions is one of them.

Three old maids, going blueberrying with a wagonful of tin pails, were the next team he met; and to them Addison imparted the information jocosely that he was walking with that wheel for the sake of his health.

"You don't look very sick!" one of them remarked, tartly. "I guess all you need is a dose of good manners."

Addison began to think so himself. He took thought again, and on meeting an elderly couple, a little further on, stopped when they stopped, and putting on a sad look, pointed with his finger to his ears, then to his mouth, and hastened on.

"Poor fellow!" he heard the woman say, "He's deaf and dumb. I suppose he is some kind of a colporteur."

That worked so well that he determined to go on pretending he was a deaf-mute. A few minutes later a double wagon, with a merry party of young people, came along, who promptly plied him with questions.

Again he pointed to his ears and shook his head, but had hardly got past when one young rogue let out so piercing a yell that Addison started in spite of himself and glanced back. Whereupon a shout of laughter rose behind; and jumping out, the boys of the party began pelting him with whatever came handiest. He was obliged to ply his legs and set the road-measurer in rapid motion to escape the clods.

By this time he was thoroughly out of patience. It seemed to him outrageous that a person could not go along a public highway, attending strictly to his own business, without being subjected to such vexatious attentions. He grew so angry over it that presently he did a very foolish thing.

He had stopped to make a record and mark the location of a farmhouse, when he noticed a horse and wagon

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

A Mother's Prayer

God, to Thee I do not pray
For hoards of gold
Or wealth that may
Be bought and sold.
I do not long for loud acclaim
Nor clamor for unbounded fame.
But these, Oh God, are the things I ask:
Strength to perform my every task
That comes with each new day;
A gleam of light to show the way;
Hope and courage as the years unfurl
To rightly train my baby girl.

—Lilian Cheney,
Wolfeboro, New Hampshire.

coming on behind him, driven by a large, overgrown boy of very rustic appearance. On the back seat of the wagon were two girls, who looked as if they might be the youngster's sisters. They had been berrying, and had several baskets and pails well filled.

When opposite him they stopped, as Addison expected; but instead of asking the usual old question, all three sat for some moments watching him. At last the boy drawled out:

"What d'ye call that funny-lookin' wheel thing?"

Addison felt that the limit of his patience had been reached. He rose up suddenly, rolling his eyes, brandishing his arms, and advanced on them, shouting:

"Sic transit gloria mundi! Hic, haec, hoc! Mox anguis recreatus! Carthago delenda est!"

But the young berry-pickers did not wait to hear all that. The girls cried out in alarm, the young fellow applied his whip, and on they went, with their old white horse at a run.

"He's crazy! He's crazy!" Addison heard them exclaim to each other; and in the irritable state of mind into which he had fallen he deemed it a good joke.

(Part II, concluding this story, will appear in the next issue.)

Grange Gleanings

(Continued from Page 2)

drills, tableaux and other accessory features, all calculated to inspire more interest in Grange ritualism for the coming season. These meetings were held respectively at Hudson, Saratoga Springs, Cobleskill and Newburgh, and additional interest was created by the presence of many State Grange officers and deputies, some of the latter coming long distances.

* * *

THE 65TH anniversary of Nutfield Grange in New Hampshire contained many features of exceptional interest. State Master W. J. Neal was guest speaker. Rather unusual on such an occasion was the Nutfield Grange history presented by Mrs. Wesley Dicey, a Golden Sheaf member of 50 years continuous loyalty.

* * *

BERKSHIRE COUNTY Patrons in Massachusetts are thoroughly alive in their preparations for the 67th annual session of the Massachusetts State Grange, which is to be held in Pittsfield the second week in December. It has been several years since the State Grange met in the Berkshire county seat. Governor Saltonstall, recently initiated into Dover Grange, has promised to attend the Pittsfield session and will be heard following the conferring of the sixth degree, among whose candidates Governor and Mrs. Saltonstall will be included.

The Song of the Lazy Farmer

A LONG about this time, gee whiz, no matter what the weather is, and even if it's warm outside, Mirandy's never satisfied until the screens are taken off; I may be weak and have a cough, or crippled up with rheumatiz, but just the same that woman is on pins and needles until I have stored them screens where it is dry and put storm windows on instead. She says it pays to look ahead, first thing we know, the northwest gale will freeze the water in the pail, and seep around them window sills till we both are taken with a chill. She likes to have the house all tight so it don't git so cold at night, and so when we git up our toes ain't quite so likely to be froze.

Mirandy's got a good idee and one that sure appeals to me, I like to keep all warm and snug and not have frost upon the rug, but now the weather is so nice, without no sign of frost or ice, that I don't see the hurry to git at these things that I should do. I like to sit on autumn days and meditate about the ways of squirrels and chipmunks as they store the nuts away and look for more; when weather's nice as it is now, I hesitate to work; somehow it seems these days was meant for rest, but Jane Mirandy's such a pest she spoils my peace ere it's begun with all the things that she wants done. When I am rested up enough, then I'll git busy on this stuff that she wants done, and finish it, but just now I would rather sit!

Personal Problems

Some Tips on Popularity

AS WE CONTINUE this department of chats together I foresee that my mail will be full of letters from girls asking me: "How can I become popular?"

I wish I could open my book of magic and there find a page entitled "How To Be Popular," in which a set of rules is laid out that will work in every case and with every girl. But, alas, it isn't so simple as that.

But there are some things that each girl can do for herself along this line and there is one big thing that every girl can do and it's the one thing that so few think of. And that is—don't dream so much about how you'd like to be popular and then do so little about it. It's all too easy to sit and sigh for good times, but day dreams alone never made a girl popular.

If you watch the most popular girl in the community, you probably think, "Oh, what's the use? She has so much personality and charm that folks just naturally like her." But you're wrong! This quality isn't something you have to be born with—it's something you have to work for. If Betty Brown attracts folks, it's because she's made a study of what interests others and applied what she's learned. If she always seems to have interesting girl friends who look to her to get things started and keep them rolling, it's because she's given the girls of her acquaintance as much as she receives from them in friendship and loyalty and partnership in good things that have come her way.

In other words, you can't live within yourselves—moping and pining because life seems to have passed you by and expect it to do anything else. You have to step out into the stream of happenings and take an active part. You have to prove that you're capable of enjoying life and having fun and that you have something to give in return for the favors you receive.

"That's easy to say," you are thinking, "but how am I going to do this 'right about face' here in my own community where I've been stuck for so long that people just never think of asking me to do anything?"

Well, I'll admit that when a girl has passed a good many years in her home community, it's hard for her to turn over a new leaf, but the best thing for that girl to do is to transform herself into another person right in the midst of her indifferent friends. They won't be indifferent long, either, take my word for it, when they find that her presence puts new life into things.

If you are being left out of things, you might start with a class in the Sunday School. Or perhaps there's a young people's organization in the community that needs you to bake a cake or plan a game or just to help wash dishes after the refreshments have

NOVEMBER

By QUEENA DAVISON MILLER.

November lifts the tattered shawl
From Autumn's tawny shoulder
And wraps her in a spangled pall
Of frost and fire-smolder.

And darkly down the road he grieves,
Where mists are grim and sweeping,
While drifts of old remembering leaves
Close softly round his weeping.

been passed. Maybe there's a young couple down the road who have a new baby they'd like you to stay with while they run into town to the movies some night. They may know other young people for you to meet, after you get better acquainted. The school teacher might like you to stop in and visit with her and help her with some of her program plans. The world wouldn't collapse, if you issued invitations for a party at your house and then planned and worked so hard to make that party a success that folks would wonder where you'd been all their lives. Just such small footholds as I've suggested may prove the first steps down the path to good times and popularity and an entirely new, wider, happier outlook on life.

Keep Gift

I have gone with a boy for a few months and on the occasion of my birthday, he gave me a lovely compact. My mother didn't like for me to accept it, but we didn't know how to return it without hurting his feelings. What was right to do?—Sue.

You should have kept it. To have returned it would have hurt the boy, as you say. I think in this modern day and age, compacts might be added to the list of things which boys may give girls before they are engaged, which used to include only books, flowers and candy.

Conversation Can Be Improved

Within the last year a new girl has moved to a nearby town and I would like very much to get acquainted with her. She goes around with a group of young folks I am not very well acquainted with. How would you suggest I get acquainted with her? I am rather bashful and among strangers I can never think of anything to say. Do you know of any way I could improve my conversational ability? Also, is it all right for me to write and ask a girl with whom I have only a speaking acquaintance for a date? I live in the country and will not get to see her beforehand.—Bashful.

Under the circumstances, it seems that about all you can do is to write or phone this girl to ask for a date. This is proper, if you have been introduced to the girl and are slightly acquainted with her.

As to improving your conversational ability—that's a bit more difficult. One of the best ways, though, is to forget about yourself and become genuinely interested in others. Being interested in the problems of others and willing to discuss them, and being interested in a variety of things so that you may be able to hold your own in conversation on different subjects, will help you a lot. Bashfulness is self-consciousness; forget yourself and you'll forget to be bashful.

Father Talks Too Much

Often when I call for my girl, her father comes in and sits down and talks to me. He is a great talker and has some pretty radical ideas which he warms up to, easily. Often he talks on and on after she is ready and we are waiting to go. I don't know how to get away gracefully under these conditions. What could I do?—N. M.

The girl should take care of this problem. When she is ready, she should say so, and state that it is time to go.

What is Your Problem?

As we announced in the last issue, our Personal Problems Editor will answer your questions by letter. She will hold your name and address entirely confidential, so you need have no hesitation in asking for her help. In this issue the questions discussed pertain mostly to our younger readers but letters are welcome from readers of all ages regardless of the personal problems they may have. Just write to Personal Problems Editor, American Agriculturist, Box 367, Ithaca, N. Y.

**PLEASE
DON'T MAKE
ME TAKE
NASTY
MEDICINE
FOR MY COLD!**

MOTHER! Constant Dosing is Liable to Upset a Delicate Stomach, Lower Resistance!

EXPERIENCED mothers know how often constant dosing upsets delicate little stomachs, thus reducing resistance when it is most needed.

Benefit by their experience. If your child has a miserable cold, head stuffed up, breathing passages irritated, and there is coughing, muscular soreness or tightness—do what 3 out of 5 American mothers do. Use the external poultice-and-vapor treatment—the home-approved treatment—specially developed for children—Vicks VapoRub.

Massage the throat, chest and back with Vicks VapoRub.

VICKS
VAPORUB

Ideal for Children . . .

Notice how it starts to relieve distress.

ACTS 2 WAYS AT ONCE. VapoRub stimulates like an old-fashioned warming poultice. At the same time its pleasing medicinal vapors are breathed direct into the cold-irritated air passages.

For hours, this double poultice-and-vapor action continues. It invites refreshing sleep. Often, in the morning, most of the misery of the cold is gone. No wonder Vicks VapoRub is the approved treatment in 3 out of 5 homes all over America.

So Why Experiment?

Just as Good for Adults

Splendid Cough Remedy Easily Mixed at Home

Needs No Cooking. Big Saving.

To get quick and satisfying relief from coughs due to colds, mix your own remedy at home. Once tried, you'll never be without it, and it's so simple and easy.

First, make a syrup by stirring 2 cups granulated sugar and one cup of water a few moments, until dissolved. A child could do it. No cooking needed.

Then get 2½ ounces of Pinex from any druggist. This is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action on throat and bronchial membranes.

Put the Pinex into a pint bottle, and add your syrup. Thus you make a full pint of really splendid medicine and you get about four times as much for your money. It never spoils, and children love its pleasant taste.

And for quick, blessed relief, it is amazing. You can feel it take hold in a way that means business. It loosens the phlegm, soothes the irritated membranes, and eases the soreness. Thus it makes breathing easy, and lets you get restful sleep. Just try it, and if not pleased, your money will be refunded.

Kernels, Screenings and Chaff

By H. E. BABCOCK.

NEWSPAPERS lately have been carrying stories released by agencies of the Federal Government in which these agencies commend themselves for the effective work they have done in the Northeast in helping land owners salvage the timber which was felled by the spectacular hurricane of about a year ago.

So far as I know the propaganda stories put out by the public agencies which dealt with this situation are true, and the agencies which carried on the work should be commended *by others* as well as by themselves.

DROUGHT DAMAGE GREAT

In the year since the hurricane, certain areas of the Northeast have been the victims of another calamity. To be sure this summer's drought was not nearly as spectacular as last fall's hurricane. *The damage caused by the drought in dollars and in its effect on standards of living will be felt for years.*

I have been contending, and shall continue to contend, that because of the precedent it has set in aiding sufferers from the drought in the dust bowl and in helping out farmers in the other parts of the United States who have suffered from flood and hurricane damage, the Government has an obligation to come to the rescue of hundreds of dairymen and poultrymen in the Northeast who will be virtually forced out of business by the first of the year un-

less they are helped to secure supplies of feed.

Fortunately, the Government-owned Surplus Commodity Corporation owns tremendous quantities of feed grain which it is having difficulty storing in the Midwest, while the barns and granaries of the Northeast rattle empty in the wind.

* * *

New Seedings

We continue to worry about our new seedings. Since worry itself is of no account, we are also going to do something about them.

At Sunnyside we have a field of approximately ten acres on which the alfalfa plants are nicely past the two leaf stage. After digging up all the information we can, we have decided to follow a practice which has been successful at the Ohio Agricultural Experiment Station and cover this field in December with a light mulch of old straw. We will apply the straw as soon as the ground is frozen hard enough to bear the weight of a team and manure spreader.

We have another ten-acre field fall seeded to a pasture mixture where the clovers and grasses are just nicely through the ground. If we can scrape it up, we are going to top-dress this field with strawy manure.

At Larchmont we have a fifteen-acre field of fall seeded alfalfa on which there is an excellent stand of quite good sized plants in a very robust stand of mustard and volunteer barley. This field will be useful to observe whether

His daddy came from England. He brought with him across the water the size and vigor and solid dark fawn color of the South Devon breed. When mated with a first class grade Guernsey cow in the herd of B. N. Millard of Ithaca, New York, she produced this day-old bull calf which weighs more than most four-weeks old Guernsey calves. There are some dairymen who believe that in their South Devon breed the English have qualities which might help us in this country produce a big, strong, vigorous dairy cow which will give a lot of golden four per cent milk. At any rate, the experiment is under way, and, as this calf and dozens of his half sisters and brothers are proving, at least the size, vigor, and color of South Devons have been successfully imported.

Meet a typical southwestern cattle raiser, H. L. Kokernot, Jr., of Alpine, Texas. Mr. Kokernot looks after around 20,000 head of Herefords on a 250,000 acre ranch. In the extreme background can be faintly discerned the mountain which forms the corner post of his holdings. It is characteristic of the clear air in the Southwest that this mountain appears much nearer than it actually is.

The story is told of an Easterner who got up one morning and, judging this mountain to be a mile or so from the ranch house, decided to walk out to it before breakfast. In due course he found that his mountain was a good thirty miles away, as the crow flies. The next morning this same individual was observed to sit down on a bank of a little stream over which he could have easily stepped and carefully take off his shoes and socks and roll up his pants. HE ALLOWED HE WASN'T TAKING ANY MORE CHANCES ON THE DISTANCES IN THE SOUTHWEST.

or not the volunteer weeds and barley afford any winter protection to the tiny alfalfa plants. *Experience at the Ohio Experiment Station seems to prove that such volunteer growths are actually harmful to fall seedings.*

* * *

Pastures Hurt

As I have been over our permanent pastures I am very discouraged by their appearance as the result of this summer's dry weather. Weeds are coming into them and I can find hardly any wild white clover plants even in areas where this spring there were almost pure stands of wild white clover. Of course, I rather expect that this hardy and invaluable little pasture plant will come back, but I am afraid it won't make enough of a recovery to be much of a factor in next summer's pasturage.

* * *

Sweet Clover Substitute

To meet our threatened shortage of pasturage next summer, we are plowing twenty-five acres of land and leveling it off with a harrow this fall. We have considered sowing these fields to: (1) Unhulled sweet clover seed; (2) Unscarified sweet clover seed; (3) Scarified sweet clover seed.

We have decided not to sow unhulled sweet clover because we are worried

by the danger of such seed, unless it is very carefully selected, carrying quackgrass and dock seed. We are afraid that the scarified sweet clover seed will germinate too quickly, so our final selection for these fields will be unscarified sweet clover seed.

According to our present plans, we are going to broadcast from fifteen to twenty pounds of sweet clover seed in December on the fields we have plowed and fitted this fall. Then, next spring we may broadcast about a bushel of oats to the acre and some permanent pasture seed mixture—I say "may" because our minds are not fully made up. One authority has recommended that we look into the possibilities of spring rye and use it instead of the oats.

* * *

Two Major Worries

The above outline of the steps we shall take to protect our fall seedings and to solve the problem of some fresh pasturage for next summer is written out with no great degree of confidence in the results we shall get. It is presented here, however, because in the last week or two we have received dozens and dozens of letters from farmers in the drought area in the Northeast who are worrying about two problems: (1) carrying late fall seedings through the winter; (2) pasturage for next summer.

Protective SERVICE BUREAU

Conducted by H. L. COSLINE

MEMBER
AMERICAN
AGRICULTURIST
PROTECTIVE SERVICE

Favors Heavy Penalties
I BELIEVE that poultry buyers should be licensed, but too much regulation would hurt the poultry industry. I am a farmer and poultry dealer. I raise a few chickens and buy and sell a few. I have a license to buy, sell and transport poultry in the State of Maine, but I keep a more complete record of my poultry transactions than the law requires. I do this for my own protection, for some farmer might try to prove that some birds that I raised were his.

I believe that everyone who buys poultry over six weeks old from a farmer for any other purpose except breeding should be licensed. The license fee should be small, but the penalty for violating good business ethics on the part of the buyer should be high. I would like to be the judge to fine the buyer you mention in the October 14 issue \$1,000, revoke his license for five years, and order him to pay the farmer twice the price that he had agreed to pay.

I think agricultural papers and other farm agencies must teach the farmers that they should report unlicensed and unscrupulous buyer to the proper authorities. A buyer who once stole two hens from me did not have a poultry license as provided by law in Maine. Furthermore, his truck was loaded to three times its licensed capacity, and I let him go because that was the "easiest way out."

It would seem to me that around here small cattle dealers (and there are a lot of them) "pick up" a few hens for their own use and then find it profitable to sell them shortly. Perhaps if their actions could be checked carefully, half of the poultry losses could be accounted for.—C. W. S., Maine.

"Switching" Stocks
"I have some stock which is not paying dividends. Recently I received a letter from an investment company suggesting that I trade it for some shares which they are selling in an investment trust."

Do not do it until you have had a chance to investigate the deal thoroughly. I am always suspicious of any concerns that suggest trading stock for shares in other companies. Often the shares you hold have a real market value though it may be less than the amount you paid. Many concerns see an opportunity of getting these stocks by trading others of less or no value, on the basis of glowing promises.

The question of asking sound advice on investments is a troublesome one. You can always talk to your banker who will be glad to advise you as far as he has the information. Another possible source of information is a letter to the Financial Division of the National Better Business Bureau, Chrysler Building, New York City. They are in no sense investment advisers but they do have a wealth of information about questionable companies and are glad to warn the public about dealing with concerns that are of the "gyp" class.

Missing!
"On Tuesday, October 17th, my hired man left. At the same time I missed \$31 in cash and my Chevrolet 4-door sedan which was filled with new bushel peach baskets, also many other articles which I valued at approximately \$148.00. My car is light blue, 4-door, 4 cylinder, 1927 model. The engine number, 3718941; serial number, 12AA79392. The man's name is Joe Keith Hayden Ball, age 27, tall—about 6 feet, weight about 170, rather dark, very decided Indian features, black hair and eyebrows, brown eyes. Walks erectly, but sometimes has a slight limp. Likes to be well dressed. Had a

scar running about two inches across right forearm about three inches below elbow—claims to have been a cowboy in Utah. Has very large appetite, is a poor workman and no teamster at all. I believe he will try to get a farm job. Would like to know where he is."

If any of our readers see a man of this description or know anything about him, we would appreciate your notifying us and the State Police.

Training Cow Dogs
A reader asks for information about training cow dogs. We do not know of any good book on the subject, and it appears that no two people have just the same system.

If you have trained a good cow dog, tell us how you did it. We will print as many of the best letters as space will allow. For every letter printed we will pay \$1.00.

Stopped Payment
"We sold some onions and the buyer paid part in cash and gave us a check for \$24.50. About a week later he came over and told us that he stopped the check, as he said the onions were bad. Will you advise me what to do?"

When a case of this sort arises, and they come too frequently, there is the suspicion that the buyer stops payment on the check to chisel on the deal. While it is a misdemeanor to give a check without funds in the bank, there is no law against stopping payment on a check—then it becomes a matter of negotiation between buyer and seller. Unfortunately, there seems to be no remedy for this situation though it will help to cash the check immediately. Obviously, there should be no further dealing with this particular buyer.

Stolen Traps
If we are going to pay \$4.25 for trapping license from now on, is it fair to let boys under 16 do any trapping without a license? They are just as apt to catch game as anyone, and they have a chance to spring and steal traps, making it hard for those that have to pay such a big license and try to make it worth while.

The nearer to towns you set traps, the more you have stolen, and it seems to be young boys who are meddling with the traps. I haven't been troubled much myself as I do most of my trapping on my own land, but I know others who have. We could stand this all right when we could hunt, fish and trap for \$2.25; but a man can't have many traps stolen or molested and pay such license fees as we have now.

—G. W. R., New York.

\$25.00 Weekly Benefit
Specified Sickness and Accidents
Men and women accepted—ages 15-69 at \$10.00 a year. No medical examinations. Policy pays on specified sickness and accidents. Write for full details.

3200 Attend Stockholders' Meeting

Committeemen from Three States Hear Reports, Elect Directors, and View Exhibits

THE LARGEST GROUP of farmers ever to attend a G.L.F. Stockholders' Annual Meeting assembled in Syracuse October 30 and 31 for a two-day program built around the theme of "The Use and Usefulness of G.L.F."

"Farmers found G.L.F. more useful last year than the preceding year to the extent of approximately 27,000 tons," said General Manager J. A. McConnell in his annual report Tuesday morning. "This past year represents the largest use of G.L.F. ever made by farmers, except one—the year of 1936-37, following the great drouth. The combined plant and overhead costs per ton for the past year were slightly less than the preceding year."

Following the General Manager's report, the stockholders re-elected Clifford E. Snyder of Pittstown, N. J., J. D. Ameele of Williamson, N. Y., Earl B. Clark of Norwich, N. Y., Halsey L. Benson of Mansfield, Pa., and Harry Bull of Campbell Hall, N. Y., to the Board of Directors. A total of 4,298 ballots were cast, including those sent by mail.

In the course of the two-day meeting, the stockholders heard addresses by Dr. W. I. Myers, head of the Agricultural Economics department at Cornell University, Jerome D.

Arnold E. Davis of Livonia, N. Y. makes a nomination from the floor.

Barnum, publisher of the Syracuse Post-Standard, and Dr. William H. Martin, Dean of the New Jersey State College of Agriculture and Director of the New Jersey Agriculture Experiment Station.

At the open forum which wound up Tuesday's session, Morris Latterman of Lakewood, N. J., voiced the feeling that directors should not be allowed to succeed themselves. After several had spoken on both sides of the question, William Seller, Central Square, N. Y., introduced a motion that the present by-laws remain unchanged in this respect. The motion was carried by acclamation.

Qualified as stockholders by their local Service Agencies, committeemen elected in the communities served by G.L.F. cast their ballots at Syracuse for nominees to the Board of Directors.

Committeemen throng the tanbark arena to see the exhibits depicting "The Use and Usefulness of G.L.F." The two cows shown here have each produced more than 100,000 pounds of milk on G.L.F. feed.

FORMULA IMPROVEMENTS MAKE SAVINGS FOR POULTRYMEN

SLIGHT CHANGES IN G.L.F. mash formulas, effective November first, bring poultrymen better feeds at a saving in cost. The scarcity and the variable quality of animal protein feeds have been a source of grave concern to the men responsible for poultry feed formulas. On recommendation of college nutritionists, more soybean oil meal is now being used to replace part of the meat scraps and fish meal in the mashes. This assures more uniform quality and helps maintain the savings already being made.

Supplies of meat scraps and fish meal previously bought or contracted for have enabled G.L.F. to protect poultrymen against the full effect of the rise in the cost of these ingredients. As it becomes necessary to purchase new stocks at higher prices, mash costs would necessarily rise. The formula changes will help to hold these costs in line.

The changes will not disturb growing or laying flocks now on these feeds.

New Mash Contains Yeast

Rich in protein and vitamin content, dried brewers' yeast is of great value to laying hens. This ingredient is used in the new G.L.F. feed, Special Laying Mash, to furnish riboflavin (Vitamin G) and other vitamins, making the new mash en-

tirely adequate for totally confined laying flocks.

Here is the formula:

SPECIAL LAYING MASH

360#	Wheat Bran
400	Flour Middlings
529 3/4	Yellow Corn Meal
100	Fine Ground, Low Fiber Oats
100	Alfalfa Meal—Low Fiber
240	41% Soybean Oil Meal
80	Meat Scraps, 55% Protein
80	Fish Meal
40	Brewers' Yeast
40	Ground Limestone
20	Salt
1/4	Manganese Sulphate
10	Reinforced Cod Liver Oil (400 units Vitamin D, 3000 units Vitamin A, per gram)
2000#	Special Laying Mash

Guaranteed Analysis

Protein (minimum).....	20.00%
Fat (minimum).....	3.00%
Fiber (maximum).....	7.00%

Cod Liver Oil Reduced in Chick Mashes

Starting & Growing Mash and Growing Mash now contain four pounds per ton of reinforced cod liver oil, instead of the five pounds previously used. Four pounds of this reinforced oil is about equal to sixteen pounds of standard straight oil, and provides twice as much Vitamin D as experiments have shown to be necessary for growing chicks.

Since four pounds gives a 100% margin of safety, it is unnecessary for poultrymen to pay for additional oil beyond the needs of the chicks.

AMERICAN AGRICULTURIST

FIVE YEARS FOR \$3.00 — THREE YEARS FOR \$2.00 — PUBLISHED EVERY OTHER WEEK

Congratulations to **DAIRYMEN for \$2.27**

HIGHEST OCTOBER MILK PRICE IN NINE YEARS

IT IS ALSO highest price for ANY month since the depression began, excepting November and December last year when prices were a few cents higher because present Milk Marketing Agreements were then in force.

Milk prices last winter continued good until some dealers and other enemies of dairymen took the Marketing Agreements to court, and succeeded in having them temporarily suspended. Ruinously low prices followed, but organized dairymen finally restored the Agreements, and better milk prices are the result.

For these good prices *American Agriculturist* commends and congratulates:

FIRST: *The Metropolitan Cooperative Milk Producers Bargaining Agency, Inc.*

IN THIS Bargaining Agency more than 75 large and small milk marketing cooperatives, representing a majority of dairymen, have worked together through thick and thin, through strikes and rumors of strikes, through bitter criticism and opposition, and because these dairymen have **cooperated, all dairymen** are now benefitting.

SECOND: *We congratulate the New York Legislature, Governor Herbert H. Lehman, and Commissioner Holton V. Noyes.*

CONSCIOUS of the ruinously low prices to dairymen, they passed the Rogers-Allen Law, established the State Marketing Agreement and have continued to cooperate in every way possible with dairymen and their organizations for better milk prices.

THIRD: *We congratulate the New York Conference Board of Farm Organizations.*

THIS Board represents the Grange, the Farm and Home Bureaus, State Horticultural Society, Dairymen's League Cooperative Association, the G. L. F., and the Vegetable Growers' Association. It urged the passage of the Rogers-Allen Law. This law permitted the dairymen's cooperatives to join together in the Bargaining Agency legally, and also made it possible for dairymen, through the Bargaining Agency, to request State and Federal Marketing Agreements.

The Conference Board also has emphatically and consistently sup-

ported the Bargaining Agency and its efforts to raise milk prices to dairymen through the State and Federal Marketing Agreements.

FOURTH: *We congratulate the United States Department of Agriculture, its Dairy Division,* for their help in establishing the Federal Milk Marketing Agreement, and MR. E. M. HARMON for his able administration of the Federal agreement.

FIFTH: *We congratulate the New York State College of Agriculture and the other State Colleges in the Milk Shed,* and their EXTENSION FORCES for their splendid service to dairymen, in giving them the facts about milk marketing without fear or favor.

SIXTH: *We congratulate those newspapers, Chambers of Commerce, and business men of the Milk Shed* who are doing everything in their power loyally to support the dairymen, the Bargaining Agency, and the Marketing Agreements.

LASTLY: We state with some pride, that in every issue of *American Agriculturist* for the past several years we have worked for better milk prices for dairymen, tried to give them the honest facts, and supported them in their ORGANIZED efforts to get

A LIVING PRICE FOR MILK.

We have supported the State and Federal Marketing Agreements because, while having their defects, **THEY HAVE MET THE TEST** of getting **BETTER PRICES** for the farmer's milk.

WE OF *American Agriculturist* rejoice with you that there now seems to be a **BETTER DAY AHEAD** for dairymen of the Northeast because we have a **plan that is working**, and because more and more dairymen are beginning to realize who their enemies are, and to understand the need of continuing to work together.

E. R. Eastman
PRESIDENT & EDITOR.

THE OUTSTANDING
TRUCK FOR THE MONEY

FORD V-8
FOR 1940

ALL THE WAY through the big new 1940 Ford Truck line you'll find value in construction, performance and economy that means "the outstanding truck for the money."

Three eight-cylinder engine sizes — 95, 85 and 60 hp — to match the engine to the job.

The 1940 Ford Truck line is the broadest in Ford history. Six wheelbases — 42 body and chassis types.

There's new modern appearance in the 1940 Ford Truck. New engine and chassis accessibility, making it easier to check the oil, service the distributor and other engine accessories, as well as clutch, transmission and rear axle. New, softer, more comfortable seats in Regular cabs. These and many more improvements join a host of time-tested, time-proved Ford features in 1940.

See the new Ford Truck at your dealer's. Compare it with any other truck. Arrange for an "on-the-job" test and know the difference before you spend another truck dollar.

FORD FEATURES FOR 1940

New modern appearance • Increased engine accessibility • Increased chassis accessibility • Choice of power—95, 85, 60 hp • 42 body and chassis types • New Sealed-Beam Headlamps • Bigger batteries, larger generators with auto-

matic voltage regulation • Semi-centrifugal clutch • Full-floating rear axle with straddle-mounted pinion and ring gear thrust plate • Two-speed axle (optional at extra cost) • Ford Engine and Parts Exchange Plan.

• FORD MOTOR COMPANY, BUILDERS OF FORD V-8 AND MERCURY CARS, FORD TRUCKS, COMMERCIAL CARS, STATION WAGONS AND TRANSIT BUSES

MAINE POTATOES

Set the Pace *By* DANIEL DEAN

EVERY afternoon from September to May, the 6,000 potato growers of Aroostook County tune their radios in on station WAGM, Presque Isle, at 5:30. On the air comes the federal market reporter with news of that day's potato market. Maine growers' hopes go up or down as he tells of the condition of the market, stronger or weaker, prices higher or lower. Most of all they listen for the price that dealers have paid to Maine growers that afternoon. I have been in the reporter's office as he phoned to Boston and New York for prices paid to Maine shippers for their carloads, and as he phoned all around the county for prices paid to growers by shippers. I have gone with him to station WAGM to broadcast, and have seen piles of letters—hundreds of them—from Aroostook growers telling how much they valued his market news.

Next morning, at six-thirty, station WBZ at Boston repeats this Maine market broadcast for the benefit of the farmers of Massachusetts, Vermont, New Hampshire, Rhode Island and Connecticut, who raise nearly 10,000,000 bushels a year. Unfortunately, WBZ cannot be heard well by most New York and Pennsylvania growers.

An Enormous Investment

Under Aroostook's favorable far northern climatic conditions, a price to the grower of \$1.00 per barrel of 165 lbs. (equal to 36½ cents per bu.) is commonly figured to pay cost of production. A large part of the 1934 crop sold for 10 cents per barrel (under 4 cents a bushel). When part of the 1936 crop brought \$3.00 per barrel, Maine farmers paid some of their depression debts. At this writing, November 9, the growers' price is \$1.75 to \$2.00 per barrel.

Aroostook potato shippers are business men with big investments. The trackside warehouses hold over 18,000,000 bushels, nearly half the county's average crop. These shippers must constantly keep in touch with carlot buyers all over the east and south by telegraph, phone and air mail to sell their carloads.

The prices that Maine shippers pay to growers each day represent the best judgment of keen and well posted business men on whether potatoes are going to go up or down in price in the future. Talk is cheap, but when business men buy literally millions of bushels for storage they are backing their judgment with their money. And when they drop prices, look out.

Dominate Entire U. S.

Maine's potato crop is so large—38 to 55 million bushels—and its carlot shipments so heavy—40,000 to 60,000 carloads a year—that it is the most important single factor in potato prices for the whole United States. The price at which Maine sells potatoes dictates what the growers of the other New England states, New York and Pennsylvania shall receive, unless they have big yields such as Long Island's record crop of 11,200,000 bushels in 1938.

All over the United States, big potato dealers in shipping sections and in cities keep in constant touch with Maine prices. When Maine drops prices, dealers everywhere begin to buy more carefully. The travelling truckmen who go out from cities to buy potatoes know they cannot pay so much. If Maine prices drop much, the big city produce buyers may order carloads of Maine potatoes, and the truckmen, having no orders for state potatoes, may disappear from the roads for two or three weeks. But when Maine price goes up, all buyers try to get local po-

tatoes for the old price until either farmers get wise or competition drives up the price.

On a rising market, city dealers, truckmen and country shippers get the advantage of the rise through their advance information. On a falling market the farmer holds the bag by not having up-to-date market news.

At present a New York or Pennsylvania farmer can get the daily market reports from Rochester, New York or Buffalo. Their radio reports tell about prices for potatoes in these markets, but do not give the prices to growers in Maine. The daily printed reports from these cities are available to farmers by mail, but the Maine potato market news comes when nearly two days old. For instance, the Monday afternoon Maine report is printed in the Rochester market bulletin on Tuesday, but does not get to the farmer 'till some time Wednesday.

Western corn, wheat, oats, hog and beef producers get radio reports from Chicago several times each day.

"Information Please!"

What New York and Pennsylvania farmers need is what WBZ gives to the New England farmers—a radio report so early the next morning that it can be used as a basis of the day's potato sales. Then when the travelling truckman comes with his fairy tales of low prices elsewhere, nothing sets him back like finding the farmer knows exactly what happened in the great key market of Maine the afternoon before. A number of times I have been able to get 5 and even 10 cents per bushel more for a truckload by knowing of the Maine advance in price.

Our other market reports by radio, mail or newspaper give us past history—what potatoes, etc., sold for yesterday or this morning. So does the Maine potato report, but its price to growers tells us what a number of big business men think potato prices are going to be in the next week or month, perhaps for balance of season.

Few New York farmers have opportunity to get information they need to market their potatoes, so often a minor product on each farm. In the case of the bad Idaho freeze of November, 1938, thousands of farmers sold their potatoes for weeks at the old prices. In eight days the price to Maine growers jumped 30 cents per barrel, 11 cents per bushel. Prompt and accurate market information meant millions of dollars to growers.

The New York state dairyman, poultryman, grain or fruit grower is indirectly interested in getting up-to-date potato market news by radio. Every bushel of potatoes profitably marketed means a better chance to diversify farm production, and thereby to cut down on surpluses of the competing farm products.

"It makes the customer's hair easier to cut."

A part of the 4,000 turkeys grown by Walter Burtis of East Homer, who sits on his heels near the center of the picture. —Photo courtesy of Lester Hardwich.

Turning to Turkeys

By MABEL FEINT

AS LEVEL as a parlor rug, that piece of land between Homer and Tully has made history in dairying. It was first to inaugurate modern sanitation in milk production as a way of making safe the lives of city babies. It is the center of some of the finest dairies and dairy practices in New York State. It is a popular mecca for agricultural students. This area, often referred to as the finest piece of farm land in the state, is now making history of a different sort.

On these broad acres is a farm not following the traditional activity — dairying — of the locality. This farm is the largest unit of a new, pioneer industry started a few years ago and recognized today as one of the largest turkey raising centers east of Mississippi.

Vormwald's Turkey Farm, on the Homer-Tully section of Route 11, with its huge sign welcoming visitors, is the place. There, in plain view of the public eye, 7,200 of these typical American birds are strutting their stuff. Their numbers signify a faith in turkey growing in the east, far from the grain growing regions, but near the consuming centers. Their presence in the heart of a dairy region is worthy of thought when dairy and marketing experts everywhere are urging dairymen to take up other interests.

This farm is the result of a doctor's orders to an indoor worker a few years ago—to get out of doors. Not only has Mr. Vormwald found health and satisfaction, but reasonable returns for these troubled times as well. He has also founded a business in which there was room for his neighbors, and these growers have found that it pays to specialize—to have enough people engaged in producing a top-notch quality product to attract the attention of consumers in a big way.

In the beginning, Mr. Vormwald grew his turkeys on the hillsides near East River and McGraw. The land he

first used was rented, and he moved to a new location each year, actually living with his turkeys to protect them in their remote locations. Now he uses 25 acres at a time on his new farm in Tully valley. He starts the poults on wire, and then places them on limited range at 8 to 10 weeks of age. This moderate exercise produces more and better breast meat in the ultimate product.

As I write this, Mr. Vormwald is feeding 6,500 pounds of feed daily to 7,200 turkeys. This food consumption on an area of only 25 acres provides remarkable fertility for the soil. From the start the birds have a dry growing mash before them all the time, with oats through the summer months. On September 1 more corn meal is added to the rations; also milk in a wet mash to tempt appetites and induce faster meat production. The milk used is condensed, with 32 per cent solids, diluted to a more liquid form.

In the community industry that has grown up around Mr. Vormwald's pioneering may be found a variety of practices, all approved ones, suited to the various ideas and conditions. The Vormwald farm buys day old poults. They come from Indiana, Maryland, Pennsylvania, Massachusetts, and from Calcium and LaFargeville in New York State. This is to insure getting the desired number with no more than a two weeks' variation in age. Mr. Vormwald has five breeds this year—Bourbon Red, White Holland, Bronze, and two crosses with which he is experimenting as to early maturity. He finds little variation as to stamina in the breeds and depends on the different breeds to give him different weights in the finished birds. The home trade wants a 10 to 12 pound bird; restau-

rants like a larger bird; while certain hotel trades prize the big Bronze gobblers.

He took ten birds to the State Fair this year and, with heavy competition, won nine prizes in the meat production classes. He won everything in this class with Bronze birds, and also had the best Bronze in the show and the best from his county.

Mr. Vormwald says the earlier Thanksgiving date this year both helps and hinders his work. Much will depend on the weather. Few Cortland County turkey growers as yet have enough refrigeration to permit killing as many birds at a time as they need to. Heretofore, cold weather has usually taken care of this. But with the new date, the western competition should not be as great, because birds from the West have to be killed two weeks before they reach the consumer. Furthermore, they are range birds and lack finish. Cortland County birds are recognized for their high quality by buyers over a surprisingly big area. Even so, growers here are not looking

for a profit this year and will be thankful to break even because of high feed prices and other conditions.

The Vormwald farm of 189 acres should, as a whole, make a fair showing. The owner, for the first time this year, raised wheat. He had 2,100 bushels from 41 acres, or at the rate of 50 bushels per acre in this year of drought. He also had 65 tons of fine long straw. He traded the wheat for corn and sold all the straw he did not need.

Mr. Vormwald also plants canning peas or canning snap beans, followed by grass. After the hay is cut, the turkeys are given the run of meadows to be plowed up the next year. He employs two helpers for the season and about 60 during picking time.

The Crocker farm, in the adjoining East River valley, grows turkeys in combination with dairying. This farm carries over its own breeding stock in open-faced sheds. Otherwise the practices are much the same as the Vormwald farm. Here but two breeds are kept—Reds and Whites, about 2,700 of them this year. F. M. Henry of East Homer has 4,000 birds, and Walter Burtis an equal number. These farms get their eggs from over a wide territory, from New Hampshire to California, and do their own hatching. Others are trying their hands at raising a few turkeys. Weekly turkey suppers in the East Homer Church are becoming an institution and are a help to the Church and to the industry.

This year has been a fine one for turkeys. Over the country as a whole, the turkey crop is 22 per cent larger than last year, in spite of the fact that the crop in the important Southwest is somewhat smaller. Although all may not be sold for the Thanksgiving and Christmas trade, the growers should fare as well as other farmers. The left-over crop may prove a blessing by making the birds more available throughout the year. In past years the Cortland turkey center has had more orders than it could fill.

HOMESPUN DREAM

By EMILY R. ESTEY.

A shining sunswept kitchen floor,
A heart's strong, rhythmic beat,
The festive sounds of laughter
And of children's flying feet;

A dusty lane, a little house
Whose windows softly gleam:
What simple, homespun warp
and woof
We weave into a dream!

Sell Northeast Apples

"Dear Editor Ed: "As a fruit grower I have been interested in your editorials and other articles on the quality and use that could be made of our good New York State apples.

"Just this past week the leading department store in our neighboring city put on a real spirited campaign to advertise the use of apples. A card was sent out to fruit growers and ads were run each day in the leading county papers. The card read as follows:

"We're with you—to boost the idea to EAT more APPLES—especially Columbia County Apples. This week we are devoting our entire show window front to publicize Columbia County's famous apples. We are showing, too, many ways and uses of apples—to help make the public more apple conscious. It's just a friendly gesture to our County neighbors. We hope you will drop around and look over the display and that you will approve the idea.

Cordially yours, Marsh's, Hudson, N. Y."

"It seems to me that *American Agriculturist* could use some influence through its contact with other papers, especially newspapers, to invite some similar action in each of the large and small cities in New York State and the neighboring states. This might be another way for the A. A. to continue its program for 'better farm prices'—S.S.A., N. Y."

WELL, why not? I suggest to every local publisher who sees this; and to every local merchant, that here is an opportunity to boost northeastern apples, which in quality are unexcelled, and at the same time build your own business and bring about more friendly relations between neighbors in the city and neighbors on the land. As the old New Englanders used to say, why not "take steps" right now?

A Good Radio Farm Program

IF YOU want to listen to an interesting and helpful farm radio program, tune in on General Electric Station WGY at 8:30 every Friday night. Under the inspiring leadership of G. Emerson Markham, one of the best radio announcers in America, this program has carved a real place for itself in serving Northeastern farmers.

Perhaps the most interesting part of this "Farm Paper of the Air" is Ed. Mitchell's answers to questions from farm folks all over the Northeast, on every conceivable problem of the farm and home. The questions are propounded by Announcer Markham, and the way Ed. answers them makes you sorry every time the program comes to an end.

Has Read A.A. for 77 Years!

"Enclosed is \$2 to renew my subscription to *American Agriculturist* for three years from date of expiration. Have been a reader, and most of the time a subscriber, for 77 years. First subscription 1862."—E. S. A., Pa.

LETTERS like the above make an editor feel more than ever like digging in and doing a better job. They also renew my sense of great responsibility in editing a paper that will be a help and an inspiration to our subscribers, particularly in these troublesome times.

We have on file in *American Agriculturist* offices practically every issue of the paper since it was first issued in 1842. One of the things I like to do when I have time is to read those old volumes. When I do, I am always impressed with the good job done by those *American Agriculturist* contributors and editors of other days. It has always been the *Old Reliable*, serving the farm-

ers of the Northeast to the limit of its ability. It is a history to be proud of. *Incidentally, our subscription list today is the largest in the nearly hundred-years' history of American Agriculturist.*

One of the things that bothers me is that so many of our friends whose subscriptions expire wait to be written to or called upon by one of our representatives before renewing. It would help us give you a better paper, and aid us in fighting your battles, if you would renew your subscription without being asked. How about it? You can check your expiration date under your name and address on your last issue.

You and Your Dad

I WENT over to Newark Valley Central School in my old home town the other night to attend a Fathers and Sons Banquet given by the Future Farmer boys of the high school.

I don't know when I have been more inspired, for of all of the partnerships in the world, the one between son and Dad, particularly if it is a farm partnership, is the closest and best. Dad brings to it the wealth of his lifetime experience on the old farm, and son brings to the partnership, if Dad is open-minded, the new science of agriculture which is vitally needed in these changing times. Then, of course, above the business itself is the happiness possible when son returns to work with father on the home farm instead of going off into other fields.

Golden Wedding Anniversary Contest

THE EDITORS of *American Agriculturist* believe that it is just as important to live as it is to make a living. There is no point in existing if one cannot be happy. And there is no way in the world by which happiness can better be achieved than through the right kind of marriage. We are always hearing in the newspapers about the marriages that fail; we seldom hear about those that succeed. *Most marriages are successful.* And what greater achievement is there than for a couple to live together in mar-

PARTNERS FOR 64 YEARS. — Meet Mr. and Mrs. J. W. Hanmer, Dundee, New York, who observed their 64th wedding anniversary on November 11. Mr. Hanmer will be 89 next February, and Mrs. Hanmer was 83 last August. They have one son, who is Mayor of Dundee, and a daughter who is the wife of the Dundee Bank cashier. Mr. and Mrs. Hanmer have always been farmers. They accredit their long life and their successful and happy marriage to looking always on the optimistic side of things.

Be sure to read the editorial on this page, announcing a Golden Wedding Prize Contest.

This picture is published through the courtesy of James Coss of Canandaigua, New York.

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR FARM PRODUCTS.
3. LOWER FARM TAXES.
4. A GOOD LIVING FOR EVERY FARM FAMILY.
5. MORE FUN ON THE FARM.

ried happiness for fifty years or more, like Mr. and Mrs. Hanmer, whose picture is shown on this page?

In order to emphasize that most marriages are successful, *American Agriculturist* now announces its Golden Wedding Anniversary Contest. For a good picture of the couple married longest, received during this contest, *American Agriculturist* will pay \$10. For the picture of the next longest married couple we will pay a second prize of \$5, and we will pay \$2 for every other picture of a couple who have been married for fifty years or more, which we have room to print. Pictures must be accompanied by a short letter giving a brief personal history of the couple, emphasizing any outstanding or interesting points in their lives. Every letter should also contain the couple's answer to this question:

"What one piece of advice above everything else would you emphasize in advising a young married couple just starting out together?"

Care should be taken by those sending in pictures to make certain that the couple give their consent to having the picture published. Unless this release is indicated in every letter, we cannot publish the pictures.

We plan to make this the largest and most interesting contest ever conducted by *American Agriculturist*. The contest will close December 31. Address letters to *American Agriculturist*, Department G., Savings Bank Building, Ithaca, New York.

Hurray for "Punkin" Pie!

EVERY time I forget and say "punkin" pie instead of pumpkin pie, somebody is sure to correct me. It seems to me that good old-fashioned punkin pie like Ma used to make is a lot better than when we go and doll it up by pronouncing it this new fangled way.

So I *HEREBY RESOLVE* that, as far as I am concerned, after this it is "punkin". If that is treason, make the most of it!

Eastman's Chestnut

IN PRINTING the following chestnut, which a friend just sent me, I want to say that I believe in a fair deal and that these columns are open to any farm women who think they have a good joke on the men. So come ahead. Here's the chestnut:

"At one point entering Buffalo, even though the country is quite open, the police are very insistent that drivers come to a full stop. Recently a man from our town, driving into Buffalo with his wife, was warned by her that he must be sure to stop at this particular point, but man-like he took chances and kept going. A cop stepped out and stopped them. His wife at once began:

'Officer, I told him to stop and he just would not do it!'

Ignoring her, the cop turned to the husband, and said:

'Go on, I'm married, too.'

We're Off to . . . WESTERN WONDERLAND!

Announcing Another A. A. Tour
February 24th to March 19th

THERE comes a time in the life of every one when he or she longs to get away from familiar things and see and do something new and different. But often the effort of planning a trip, looking up good places to stay at, figuring out the cost, and the thought of having to wrestle with baggage and timetables while on a vacation makes the whole thing seem like too much trouble—and so the trip fades away into the land of Nothing Ever Happens.

Not so, however, when *American Agriculturist* does the planning for you. Then all you have to do is to make your reservation with us, sit back and let us do the rest. If you have ever been on an *American Agriculturist* tour, you know what that "rest" means. It means a perfectly planned trip to some of the most beautiful and interesting places in the world, with a competent person in charge of our party to look after all details. It means first class train and hotel accommodations. It means delicious meals, with such variety of choice that everyone will find plenty to his taste. It means congenial company, for they don't come any finer than the A. A. people who go on our tours. It means, in short, a wonderful, inspiring trip, with a maximum of travel comfort, of good fellowship, and of fascinating and beautiful places to be visited.

Folks who have gone with us before declare that there is no finer experience, and not infrequently they take a second and third trip with us. Just last month we received this nice letter from Mr. and Mrs. Alton Rowe, Sr., of Delmar, N. Y.:

"I have delayed writing to tell you how my husband and I enjoyed the trip to California last spring on your conducted tour. We enjoyed it so much that if you anticipate planning another, wherever it might be, we would like to be kept informed, as if it were possible for us to go we would like to. I would like to say that I don't think there was a minute lost or a minute of unpleasantness during the whole trip. That seems unbelievable but it is so."

The trip which the Rowes took with

us last spring to the West Coast was a grand one, but we are even more enthusiastic about the tour we have planned with the Northern Pacific Railway for this coming February. The itinerary for it reads like a trip to wonderland, for not only does it include such outstanding attractions on the West Coast as gorgeous Yosemite National Park and the Mariposa Grove of Big Trees, but it is unique in that it will be almost like a trip abroad. Our party will have a chance to see "a bit of Old England", for one of our first jaunts after reaching Seattle will be a trip to Victoria, capital of British Columbia; and on our way home we will stop off for a day in Juarez, Mexico, where our swarthy, Spanish speaking neighbors seem like people from another world.

To reach Victoria, we will board one of the beautiful Canadian Pacific "Princess" liners for a four-hour boat trip to this lovely city, situated on the southern tip of Vancouver Island. This Island, which is almost as large as Switzerland, is mountainous and most picturesque. Arriving at Victoria, we will take a motor trip around the city, and will visit the famous Butchart's Gardens, which cover 16 acres and are a thing of beauty the year around. When we visit there, March 2, a wealth of spring flowers will greet us. It is said that of all Canadian cities, Victoria is the most typically English, in

its customs, gardens, schools, dress, and the way its people speak English.

Another highlight of the trip will be a visit to Yosemite National Park, where everyone is thrilled by the incomparable natural beauty of this

There is no more awe-inspiring sight than famous El Capitan, the granite monolith which towers 3,604 feet above the floor of Yosemite Valley. Like some mighty giant of prehistoric days, it seems to stand guard over the incomparable beauty of the spot.

Los Angeles, attractively situated between the sea and the mountains, is a mecca for travelers. Its warm sunshine, even in winter, draws tourists from every part of the United States. Only ten days in the year without sunshine is the record given it by U. S. weather bureau! Our party will spend two full days here, with motor trips out to such famous places as Hollywood and Beverly Hills, the home of movie stars.

Left: A highlight of the trip will be when we cross the Rio Grande into Juarez, Mexico, where our swarthy, Spanish-speaking neighbors seem like people from another world.

masterpiece of nature. While there we will make our headquarters at the Ahwahnee Hotel, one of the finest resort hotels in the world. In a motor tour of the Park and of Yosemite Valley, we will see El Capitan, a granite monolith 3,604 feet high, and the Cathedral Rocks with their shimmering, lacy Bridal Veil Falls, 900 feet high. The next morning another motor trip will take us through the Mariposa Grove of Big Trees, where more than 600 giant Sequoias have been growing for centuries—the earth's oldest and largest trees.

There isn't space in this announcement to mention more than the names

of some of the other places we will visit—San Francisco, where we will make a 30-mile de luxe sightseeing tour of the city; Berkeley, Oakland and the University of California; Los Angeles, including a 54-mile tour of the city, the beaches, Hollywood, Beverly Hills and the palatial homes of famous movie stars; beautiful Pasadena and the Huntington Library, seeing enroute the Sunken Gardens, Orange Grove Avenue, Rose Bowl, California Zoological Gardens and the Alligator and Ostrich farm; San Diego and a scenic tour including famous Point Loma with its old Spanish Lighthouse; the San Bernardino Valley where we will see acres and acres of orange groves, with mountains on both sides forming a picturesque background. Then on to Texas and Juarez, Mexico, with its fascinating adobe houses, covered with bright colored plaster; the gay market place filled with typical Mexican wares; and the old Mission, "Our Lady of Guadalupe", begun in 1659.

One of the most interesting features comes near the end of the trip—a visit to New Orleans, where we will spend a whole day and a night. This fascinating city, founded more than 50 years before the American Revolution, has a population today in which every country of Europe is represented. Included are a large number of French people, who speak their own language and follow French customs. Some of these people are descendants of French families dating back to the early days of the settlement, when it was a part of Old France. We will visit the French quarter there, and its history will be thoroughly explained to us, conjuring up memories of the "Casket Girls" who came from France in 1727 to mar-

CALFHOOD VACCINATION for BANG ABORTION

BANG ABORTION is one of the biggest problems facing dairymen. In recent years an increasing number of dairymen have adopted calfhood vaccination in an attempt to control the disease. Unfortunately vaccination has frequently been used without sufficient knowledge of its benefits and dangers, and as a result, there are cases where more harm than good has been done.

Many facts about calfhood vaccination have been discovered, but some questions have not yet been answered. The New York State College of Veterinary Medicine at Cornell has in progress one of the most extensive experiments in the country, and the U. S. Department of Agriculture has also been working on the question of calfhood vaccination.

Briefly, here is the present situation: There is a general agreement that calfhood vaccination provides some immunity against contagious abortion. Many dairymen who have been vaccinating calves are enthusiastic over the results, particularly where the work has been done by a licensed veterinarian who, in addition to doing the vaccinating has been able to steer the owner away from some of the dangers.

There is a growing feeling that the man who has decided to use calfhood vaccination should have all of the information available, even though at the present time it is incomplete. Here are some important rules for this man to follow:

1. **A herd should have a blood test for Bang Abortion before any calves are vaccinated.**

A blood test will tell the dairyman where he stands and how much abortion, if any, there is in the herd. If the herd is clean, and many herds are, the man is just flirting with disaster to start an indiscriminate program of vaccination.

2. **Only animals under eight months of age should be vaccinated.**

On older animals the treatment is ineffective. Vaccinating a producing cow will cause her to react to the blood test and may cause her to abort. Indiscriminate vaccination of all animals in a herd is most apt to be done after a serious outbreak of abortion in the herd. Even if nothing is done, these outbreaks usually taper off, and if the entire herd has been vaccinated, a dairyman is prone to give vaccination the credit when, as a matter of fact, he has been merely piling up future trouble. *For emphasis, we repeat that no animal over eight months old should be vaccinated.*

A calf vaccinated before it is eight months old will react to the blood test for abortion, BUT IN MOST CASES the reaction becomes gradually less and disappears by the time the animal is eighteen months old. Unfortunately, there are a few animals where the re-

action does not end. The animal continues to react and must be disposed of. The reaction may persist as a direct result of the vaccination, or it may indicate simply that the vaccination was not entirely effective and that the animal has picked up a natural infection which causes the reaction.

3. **Do not waver back and forth between vaccination and a blood test.**

As we have already stated, a blood test gives the necessary information on which to base intelligent use of calfhood vaccination, but there is nothing to be gained by blood testing a few years; then vaccinating a few years

with no blood tests; and then again going back to a blood test program. With certain restrictions, a man using calfhood vaccination may hope in time to build up a disease-free herd. Vaccination alone will not eradicate the disease. TO GAIN THIS END, IT MUST BE USED IN CONJUNCTION WITH BLOOD TESTS. The reason is that a few animals vaccinated before they are eight months old continue to react for their lifetimes and

MAY BE spreaders of the disease.

4. **Bang abortion vaccine should be handled and administered only by a licensed veterinarian.**

No dairyman should attempt to vaccinate animals.

5. **Vaccine should be purchased only from reputable concerns.**

There is a federal law which prohibits inter-state shipment of vaccine except from recommended laboratories, but so far as we know, there is no law in the book effectively to regulate the handling and use of vaccine manufactured within any state.

6. **It is wise not only to employ a veterinarian to vaccinate, but to seek and follow his advice closely.**

At least in New York State, and I believe in most other states, it is possible for a man to practice calfhood vaccination for several years, and then to enlist under the federal-state test and slaughter program, BUT to do this it is necessary to discontinue calfhood vaccination and under the test and slaughter plan to blood test no animals that have been vaccinated (with the intention of receiving indemnities) for eighteen months after the vaccination is received.

In New York State about 3,600 herds, containing some 90,000 cattle, are under official supervision for the eradication of Bang abortion, and the best possible estimate indicates that about an equal number of herds have been tested privately. That is a real start, but after all it is just a start. If the eradication of Bang abortion is to be handled somewhat along the line followed in TB eradication, the problem must be faced and the job should

TRACTOR TIPS

Spark Plugs That Fit

IF ONE of your neighbors had a size ten foot and bought a pair of Number 8 or Number 12 shoes, you'd say he was a chump.

Yet many a tractor stumbles along, handicapped with spark plugs that are just as badly misfitted. Spark plugs vary primarily in the length of their porcelain tips. These run from stubby little affairs a quarter of an inch long to big fellows an inch and a half long. And there is a very definite reason for this variation in length. The length of the spark plug—which determines its "heat range"—must be fitted to the tractor and its fuel as carefully as a shoe to your foot. It's easy if you know how.

Low grade fuels, such as distillate or kerosene, need plenty of heat to vaporize them. Part of that heat is supplied by the "hot" manifold. Even so, part of the charge may be still in liquid form when it enters the cylinder. In this case, a "hot" spark plug with a long tip must be used. Because when the liquid is vaporized it has a "cooling" effect and will foul the plug unless it is hot enough to keep itself clean.

When you burn gasoline in your tractor, the reverse is true. Gasoline vaporizes readily, and is usually in a completely gaseous mixture when it enters the combustion chamber. In this case, you want the spark plug "cool" to avoid pre-ignition, fouling of plugs and excessive heating of valves. So a plug with a short tip that will keep cool should be used.

It will pay you to remove the spark plugs and see if they match the fuel you are using, especially if the tractor has been changed over from a low compression to a high compression tractor, or if you are using gasoline in a low compression tractor.

Octane Numbers in Plain English

IF YOU have a broken leg and the doctor takes a look and pronounces it a "fractured tibia," it doesn't help much. As far as you're concerned, it's still a broken leg.

If your tractor won't pull as many tools as you'd like, or won't pull them in high gear, or if the engine runs hot and noisy, it doesn't help much to say that you may be using fuel "with too low an octane number." Yet that's probably the way an engineer would describe it. What does he mean by octane number? How can it be explain-

ed in plain every day English?

An octane number is a unit of measurement, like a pound or a foot or a bushel. Instead of referring to weight or length or bulk, however, it refers to the ability of a fuel to burn evenly and smoothly when it is put under pressure in an internal combustion engine. It prevents premature explosion and the resulting power loss, excessive engine heat and a noise that sounds like a "knock" or "ping".

Fuels with low octane numbers, such as kerosene and distillate can't stand much pressure and therefore can be burned only in a low compression engine.

Fuels with a high octane number, such as regular-grade gasoline can stand much higher compression pressures. The higher the compression pressure, the more useful power you get out of the fuel, so it is a great advantage to use any fuel of higher octane number in a high compression engine.

Most tractor manufacturers today are making high compression engines, designed to use regular-grade gasoline of 70 to 72 octane number and to give you the full advantage of its extra power. While tractors with low compression engines commonly use low-grade fuels, such as distillate or kerosene, many farmers prefer to use regular grade gasoline for its many other advantages. Such farmers can get even more power from their tractors by changing them over to high compression type and thereby take full advantage of the high octane rating of the regular-grade gasoline they are using.

Keep Tractor's Nose Clean

TRACTORS have air cleaners for the same reason that you carry a handkerchief. The air cleaner is the tractor's nose. It has to be blown and blown often, especially when the soil is dry and the air is full of dust.

Most instruction manuals say that the air cleaner should be cleaned and have fresh oil once a day. Not once a week. Not once a month. Not whenever you happen to remember it. But *once a day!* And, the books go on to say, under extremely dusty conditions, the air filter should be cleaned *two or three times a day!*

Why so much emphasis on cleaning the air cleaner? First of all, your tractor uses an enormous quantity of air, which furnishes the oxygen which the vaporized gasoline must have to burn. For every five gallons of gasoline you burn, your tractor must have as much air as would fill a silo 15 feet in diameter and 30 feet high! Now imagine a silo of that size filled with dusty air. Imagine all that dust being concentrated in one spot as big as the top of your air cleaner. Now do you see why, under extremely dusty conditions, the air filter should be cleaned two or three times a day?

What happens if it isn't cleaned? Most air cleaners are of the oil-washed or oil bath type. They use oil to collect the dirt from the air. To collect it properly, the oil must be light enough to flow freely at the existing temperature. When it becomes thick with dirt, it fails to pick up the new dust that is constantly rushing by. Most dusts will readily settle out of the oil, especially if there is a quiet zone in the oil cup. This sediment displaces enough oil so that the oil level is raised to a point where muddy oil may be carried over into the engine,

50 NEW ENGLAND BREEDERS' SALE 50 REGISTERED HOLSTEINS 50

at Brattleboro Sales Pavilion, Vernon Street, Brattleboro, Vt.
TUESDAY, DECEMBER 12TH. Sale starts promptly 11 A. M., rain or shine, in heated room.
SALE CONSISTS of forty to fifty Fresh Cows or Springers, mostly with excellent records, from the leading herds in New England. FIVE BULLS, some service ago.
EVERY ANIMAL has been personally selected by Thomas E. Elder, and they are a really high class lot of breeding animals.
HEALTH—Many from "Certified Bangs Free" herds. All animals are from T.B. accredited herds and have been tested and declared negative to Bangs shortly before sale. All animals are guaranteed by the consignors to be sound in every way unless otherwise announced at sale. All animals are guaranteed to be breeders. They will all be sold to the highest bidder.
COMPLETE INFORMATION and a list of consignors will appear in future issues.

Name.....
Address.....

By L. B. SKEFFINGTON

from SKEFF'S NOTEBOOK

"KEEP America out of war" and "restore America's economic balance" were keynote phrases in the annual address of National Master Louis J. Taber at the 73rd annual meeting of the National Grange at Peoria, Ill.

While the needs of agriculture were given emphasis in the address, Taber devoted a large part of it to reviewing the national scene and the situation growing out of the European war. It was a stirring patriotic speech. "Paganism on the march" in Europe was denounced roundly, but at the same time there was solemn warning that "our every national act must be impartial and along the pathway of attending strictly to our own business, and allowing the nations of Europe to march on their blood-stained pathway to destruction if they must."

Taber warned that America would lose in any war because it would lose its freedom at home. "We dare not forget that a nation engaged in modern warfare must, if it succeeds, suspend all the guarantees of liberty," he said. He warned "we must not be led astray by the propaganda of international bankers, munitions manufacturers and those who would make a profit out of war." At the same time he urged "adequate national defense as the very foundation upon which continuing freedom and liberty must rest."

Turning to the problems of agriculture, he pointed out that for the past decade the farmer has faced a 22 per cent exchange disadvantage in dealing with other groups. He quoted Department of Agriculture statistics to show that during July and August prices received by farmers were equal to only 74 per cent of the prices they paid for goods and services.

He characterized the various farm programs as "earnest steps, honestly administered, trying to help agriculture." But, he said, present farm prices and farm income are such that "we must find a broader program. When we note that the farm dollar is worth a little less than at the beginning of the decade it takes no eloquent argument to prove that we have not yet solved our farm program, and it remains with us as one of the unanswered steps toward recovery."

"The farm dollar is 22 per cent below par and it is more than a coincidence that approximately 20 per cent of the nation's labor is unemployed. This proves that America's greatest need is economic balance. Such disparity cannot be corrected by legislation alone. Until labor and industry will meet agriculture in solving the problem depression will continue. Payrolls, business activity and advancing farm prices go hand in hand."

"At present America's combined surplus of wheat, cotton and corn is greater than at any other time in the nation's history. This again emphasizes the need of a long-range and broad program. Its objectives should be: 1, to assure to every person in the nation an ample supply of food, clothing and shelter; 2, to guarantee the farmers a fair return on their products for the essential service which they render to society."

The Grange leader urged that the American market be preserved for American farmers, and that reciprocal trade treaties be subject to approval by the Senate. He brought out the fact that with the exception of cotton and tobacco during the past five years 97 per cent of all American farm products have been sold in this country. This, he argued, proves "that the first step in restoring agricultural purchasing power is within reach of the nation itself, regardless of turmoil and dislocation abroad."

Taber said there has been some slight rise in farm prices due to war,

but that was not the solution to the price situation. "Speaking for the American farmer," he said, "although his prices are low and he needs income, he wants no added income if they come to him stained with human blood." He urged an honest dollar of reasonably constant debt-paying and purchasing power. "Acreage reduction alone will never solve all our farm problems, because of many inherent weaknesses, including inability to control the weather. The goal we must seek is something better than WPA for the worker and government checks for the farmer. All that able-bodied men want is a chance to work, under decent conditions and at fair wages. All the farmer seeks is a fair price and he will do the rest."

This was the 16th year that Taber stood before the Grange to deliver the master's annual address. During that time eight additional Grange states have been organized, he said, "the Grange has been restored in the South, more new Granges and Grangers have been added than in any other like period. In spite of low prices, depression and world unrest, this is the only period in which no states have been dropped from the roll. The total paid membership averages higher per year than at any similar time in the entire history of our fraternity."

Taber quoted from his annual address at Harrisburg two years ago in which he suggested that the time had arrived for a change in the mastership. "This statement of two years ago is renewed with added emphasis," he declared here.

Mention was made of the forthcoming

ing Diamond Jubilee of the Grange to be observed in 1941. It is expected that at the Peoria session the place of that meeting will be fixed, probably in Washington. Plans are expected to be developed for a campaign to raise funds for a Grange building, with the cornerstone to be laid in 1941. While the location has not been decided, the belief is that it will be in Washington.

State Grange Program

THE 67th annual session of the New York State Grange will open in the ballroom of the Hotel Syracuse at 9 a. m., Tuesday, December 12th. The forenoon program consists of the annual address of State Master Cooper and reports of officers. The afternoon session will see the reports of: Mrs. Andrews, Chairman of Service and Hospitality Committee; H. M. Stanley, Secretary of the Revolving Scholarship Fund; Dr. Parrott, Director of the Geneva Experiment Station; H. E. Babcock, who represents the Grange on the Board of Trustees, Cornell University. There will also be an address by Paul Smith, Director of the State Fair.

On Tuesday evening there will be a program in the auditorium of the Lincoln High School which is open to the public, and is in charge of State Lecturer Stella Miller.

Wednesday forenoon will see election of officers, committee reports, the announcing of the winners of the Grange-American Agriculturist bread baking contest and an address by H. B. Knapp, Director of the State School of Agriculture at Farmingdale, Long Island. Wednesday afternoon, talks will be given by Dr. Carl Ladd, Dean of the College of Agriculture; A. K. Getman from the State Education Department, and E. R. Eastman, Editor of *American Agriculturist*. Other features of the afternoon will be the report by Juvenile Superintendent Beatrice Kidd; presentation of Juvenile awards, and a report of Mrs. L. E. Harvey, President of the Juvenile Deputies' Association.

On Wednesday evening in the Lincoln High School Auditorium, there will be a speaking contest for students from six State Schools of Agriculture. Fred Dean will report on the State

Fair Singing Contest, and Memorial Exercises will be in charge of State Chaplain Robert Root.

On Thursday morning there will be committee reports and Irvin Merrick, President of the Rural Letter Carrier's Association will give an address. Thursday afternoon and evening the 6th degree will be conferred in the Lincoln High School Auditorium.

The high spot of Friday morning's program will be an address by National Master L. J. Taber. Earl Bates will give a talk on "The Clan of the Soil Down the Ages." In the afternoon there will be further committee reports and installation of officers.

GRANGE GLEANER

The Grange Gleaner will again be printed during State Grange in Syracuse, December 12 to 15. This is a four-page daily newspaper printed by *American Agriculturist* and distributed to delegates each day following the morning session. It is edited by L. B. Skeffington and H. L. Cosline, and covers the high points of the day's activities.

If you have attended State Grange in recent years, you are familiar with it. If not, watch for it. You will find that a complete file of copies will be a big help when you make your report to your home Grange.

WGY Farm PROGRAMS

Monday, November 27th

12:35—"How Cooperatives Are Marketing Nearby Eggs," Prof. H. E. Botsford.
12:45—"Farm Paper of the Air Book Review," Louis Jones.

Tuesday, November 28th

12:35—"A Winter Diet for Dairy Cows," H. T. Huckle.
12:45—"Homemaker's Clinic, 'Tailored to the Finger Tips,'" Laura Wing.

Wednesday, November 29th

12:35—"Farm Electrification" Mailbag, "Some Thoughts on Thankfulness," Ed W. Mitchell.
12:45—"Countryside Talk, Halsey B. Knapp.

Thursday, November 30th

12:35—"Utilizing Our Wood," Clarence Johnson.
12:45—"N. Y. State Farm Bureau Federation.

Friday, December 1st

12:35—"Between You and Me," Howard R. Waugh.

12:45—"Homemaker's Clinic, 'Are Home-made Christmas Candies a Lost Art?'" Emma Renaud.

Wednesday, December 6th

12:35—"Farm Electrification" Mailbag, "Shopping for Mother," Ed W. Mitchell.
12:45—"Countryside Talk, Jared Van Wagenen, Jr.

Thursday, December 7th

12:35—"Is Your Farm Machinery Ready for Winter?" H. B. Little, Saratoga Co., New York.
12:45—"Future Farmers of America, 'Our Plans for the Kingston Fruit Show,'" F.F.A. Chapter, Marlboro High School.

Friday, December 8th

12:35—"Common Food Terms Often Misunderstood," Dr. A. H. Robertson.
12:45—"Women's Corner, Talma Buster, Home Demonstration Agent, Warren Co., New York.
8:30—WGY Farm Forum.

Saturday, December 9th

12:35—WGY 4-H Fellowship, "Cheer for the Cheerless," Rensselaer Co. (N. Y.) 4-H Club Member.
12:45—Grange Views and News, "And Where She Stops Nobody Knows," Greene Pomona Grange.

A. A. - Grange Bread Baking Contest News

A whole row of prize winners in Broome County Pomona bread baking contest. From left to right: Mrs. Ward Barton, Bartonville Grange, 2nd; Mrs. Earl West, Susquehanna Valley, 4th; Mrs. Carrie Ousterhout, Castle Creek, 5th; Mrs. Ralph Young, Union Center, 1st prize winner; Mrs. Fannie Jenkins, Sanitaria Springs, 3rd; and Mrs. Frank Thomson, Deposit, 7th.

IN LESS than three weeks, the *American Agriculturist*-Grange bread baking contest for 1939 will be history! Final test to pick State Champion Bread Baker will come on December 12, when 53 loaves of bread baked by as many county champions will go to Syracuse to be judged on the first day of New York State Grange's big annual meeting.

After the judging, the winning loaves of bread and prizes will be displayed in the Hotel Syracuse, where the Grange will have its headquarters. On the morning of December 13, names of winners will be announced from the platform, and prizes awarded to winners who are present. This is always a big moment in these annual baking contests, because winners' names are kept a dead secret until the awards are made.

Forty-eight Pomona Granges have already held their county contests and reported names of winners to us. Still to be heard from are Cayuga, Chemung, Niagara, Orleans and Schenectady. Following is a list of winners received recently:

Pomona Winners

COUNTY	GRANGE	WINNER
Cattaraugus	Farmersville	Mrs. Morville Charles
Fulton	Koleneka	Mrs. Jonnie Brothers
Greene	Climax	Mrs. Helmer Erickson
Levis	Barnes Corners	Mrs. Florence Maher
Madison	Georgetown	Mrs. Douglas Bliss
Montgomery	Mapletown	Charlotte Van Wie
Onondaga	Fayetteville	Mrs. Melvin Benedict
Schuyler	Olive Branch	Estella Dilmore
Tioga	Tioga	Myra Duff
Washington	Whitehall	Mrs. John Turnbull

Subordinate Winners

COUNTY	GRANGE	WINNER
Niagara	Gasport	Mrs. Floyd Cothran
	Lockport	Mrs. R. B. Wilson
	Newfane	Mrs. L. V. McEvers
Onondaga	Tully Valley	Mrs. Stanley Burt

The Bigger Check for Your October Milk *Won the* AMERICAN WAY

IN EVERY dairy farm home in the milkshed, there is rejoicing today over the size of the check for October milk. With such returns dairymen will be able to buy the things they need and give their families a little more of the better things of life.

But when you look at the size of that check — when you think of the convenience and comfort for your family, or the extra financial security that your larger check will buy for you, stop for a moment and consider just why you got that larger check.

Isn't it true that it took a long, hard uphill fight — a 20-year fight with farmers banding together for the common good of all — in order to make that check larger?

Isn't it true that it took patience and wisdom and faith? *Faith* in the eternal rightness of the American way of doing things — the reasonable, legal way! *Wisdom* to act like grown-up men and to work by fair, sensible and business-like methods — instead of following the howls of disturbers and radicals.

Yes, and it took *patience* — patience to outwait the legal delays, the oily-tongued arguments, the insincere excuses and the unfair tricks of dealers and their anti-farm gang.

It took all of these — hard work, faith, wisdom and patience. But the reward is *worth it all*. And now you've really got that reward. It is in good old American dollars that you can spend in any store, deposit in any bank, or pay on any mortgage. It is the kind of reward that every American wants — money and independence and self-respect. Not the empty promises of some crackpot agitator . . . or the babblings of some little dictator who'd like to make you fight and riot and raise civil disturbances until some BIG dictator can take you over and make you give up *your* liberty, *your* farm.

Yes, sir, the American way is the right way and the lasting way — because there are no strings tied to it. And it pays a lot bigger dividends. Look at the larger check you've got. There's the American answer. And there's the Dairymen's League answer to radicalism, or to any other kind of "ism" on the face of the earth.

**THIS STATEMENT IS PUBLISHED BY THE FARMERS WHO OWN, OPERATE
AND CONTROL THE DAIRYMEN'S LEAGUE**

NORTHEASTERN *Slants* ON THE *National* NEWS

■ "Ham and Eggs" Plans Voted Down

ELECTION DAY saw voters in two States turn "thumbs down" on crackpot old-age pension schemes. In California, two voters said "No" to every one who said "Yes" on proposal which would have given \$30 every Thursday to unemployed persons over 50. Payments would have been made in State scrip, redeemable by State after one year provided that a two-cent tax stamp was attached every week. Defeat of the measure resulted in a sharp price advance for California State and municipal bonds, proving that its passage would have hurt the State's credit.

In Ohio, a \$50 a month pension plan to 60-year-olds was snowed under by a 3 to 1 vote. If this plan had won, it would have been financed out of proceeds of a special real estate tax.

■ Twentieth Annual Meeting of A.F.B.F.

PLANS are complete for staging of the 20th anniversary celebration of founding of American Farm Bureau Federation, in Chicago, Dec. 4-7. Most of the oldtimers who were active in forming the organization are expected to be present and will have a special "20-year Club" party of their own on evening of Dec. 6. A giant-size dining-room may be needed to accommodate them, as State of Indiana alone reports 1,500 members in its "20-year Club."

First day of the convention will be devoted to commodity conferences to give growers an opportunity to talk over their particular problems with fellow producers from all over the country.

Two Cabinet members are on the program—Secretary of Agriculture Wallace and Secretary of State Hull. Interesting talks by outstanding State farm leaders have also been scheduled.

Holding their meeting along with the men will be Associated Women of A.F.B.F. A feature of the women's meeting will be the finals in the national Public Speaking Contest, in which sectional winners from North, East, South, and West will compete with each other for the national crown. Their topic is an interesting and timely one—"The Farmer's Stake in World Peace."

■ Record Number of Government Workers

IN SEPTEMBER a new high record for number of Federal employees was reached—939,876—more than double the number in 1913, and higher even than in 1918 at the end of the war. Since 1933, figure has gone up and up. This year every month has seen an increase, until now one in every fifty-eight of our working population is in regular employ of Federal government. If State and local government employees were also included, proportion would be much higher.

SLANT: Cost of supporting this huge and ever-growing government army is something to think about. All the blame for it cannot be laid at door of government, however. Demand by the people for more and more govern-

ment aid and services means more government machinery, more federal employees—and eventually crushing taxation.

■ No Depression for Santa Claus

IN SPITE of wars and depressions, Santa Claus goes along every year just about as usual, because children have to be thrilled and grown-ups have to be cheered when Christmas comes around. So say toy manufacturers, who claim that toy business got through depression years almost untouched. This year, with better times here, they are expecting a 10 per cent increase in sales over 1938.

As usual this year, a lot of children won't get much chance to play with their Christmas toys, because their parents won't be able to leave the toys alone. New items on the market are trains with station announcements, kitchen sinks with running water, a radio sound effects kit, a bubble-blowing set that regulates size of the bubbles, and a miniature doctor's kit, complete with stethoscope.

American manufacturers of toys now make 95 per cent of all toys sold in this country, quite a difference from 1914 when we imported 50 per cent of them. War blockades at that time made toys scarce for Christmas 1914.

SLANT: Santa Claus may not do so well this year in Europe, whose toys today seem to be mostly hate, high explosives and propaganda.

■ War News

MISSES DEATH BY 11 MINUTES

Somebody tried to "get" Hitler in a Munich beer cellar, where he and his closest followers were gathered to celebrate a Nazi anniversary. Breaking his usual custom of staying there long into the night, Hitler left early—11 minutes before the bomb went off—and so escaped death. Seven were killed, sixty-three injured. Said Hitler when told of the bombing: "A man has to have luck."

German police are offering \$200,000 reward for help in catching the plotters. They lay blame on British, but most people believe it must have been an "inside job", done by some discontented Nazi.

BESIDE THE ZUIDER ZEE

One of burning questions of tonight has been, "Will Germany try to get around French Maginot line of defense by going through little countries of Belgium and Holland?" Though Holland's prime minister broadcast a speech telling his people there was nothing to fear, facts are that Germany's troops are massed on Belgium and Holland frontiers, and that those two countries are preparing for the worst. Holland canceled all military leaves, got trains lined up to evacuate people from border villages, and her soldiers stand ready to open the little country's famous dikes. About one-quarter of Netherlands' territory is below sea level, so that when dikes are opened, water rushes in to depth of from two to seven feet.

WHEN IS WASH DAY?

Germany has been rationing clothing as well as food and other things needed by her people. Latest restric-

tion is that men can have only one shirt a year. As soap is a scarce article also, that will help to solve laundry problem.

Besides one shirt, a man can have one suit of clothes, and 5 pairs of socks annually. Women may have one suit, a morning dress, and 6 pairs of stockings. One American reporter in Berlin says he hasn't been able to buy himself a much needed overcoat and pair of rubbers.

SHIPS BY ANY OTHER NAME

As soon as Neutrality Law was signed and sealed, new problem poked up its head: What to do about the 92 American ships and 13,000 seamen thrown out of work by clause forbidding them to travel in combat zones. One ship, a Standard Oil tanker, did quick change act in Boston, and sailed from there under flag of Panama and with a Canadian crew, thus getting out from under restrictions of Neutrality Act.

Hubbub arose when United States Line asked permission to do same thing with eight of its ships. Though Administration was first said to be in favor of such a transfer, President Roosevelt has stated in press conference that he is against scheme, because it would violate spirit of Neutrality Act, and also put Panama on the spot.

Plans to help sailors "beached" by the law are under way. WPA has announced that it will take on 5,000 and assign them to waterfront improvement projects. Eight thousand more will be offered by Maritime Commission a special training program with pay.

■ Farm Notes

APPLE TREES ON MAIN ST.

Members of Ohio Apple Institute, Inc., went to town this fall to help move their big apple crop. They assessed themselves one cent a bushel on their apples and put on a state-wide "Apple Week", Oct. 30 to Nov. 4. Downtown in Cleveland, Ohio, the public ate apples at every turn. Apples were sold in the streets; there was a stunning display of them—one-story high, on a busy corner; and two honest-to-goodness apple trees spread their branches in the heart of the town, where they were temporarily planted. Apple sales spurted. Good work!

HUSKY CORNHUSKING CHAMP

Winner of this year's National Cornhusking Contest was Lawrence Pitzer, Indiana farmer, 6 ft. 2 in. tall, weight 175 pounds. His record of 28.39 bushels of corn shucked in 80 minutes was best of 21 contestants from 11 States. (In 1935, Elmer Carlson of Iowa hung up national record of 41.5 bushels.)

It seems too bad that Mr. Pitzer's speed in cornhusking is wasted at home, where he has 160 acres of corn on which he uses a mechanical picker. However, his victory won him \$100 in cash and a trophy.

More than 100,000 farmers flocked to see the contest, and to inspect the exhibits of farm machinery which were a feature of the show. Mechanical corn pickers were a big item.

SUCCESS STORY

Soybeans are making a big name for themselves, not only as animal feed and a human food, but also for their industrial uses, which include paints and varnishes, linoleum, soaps, printing inks, lubricants, fertilizers, plastic materials, glue, window frames, gear shift knobs, horn buttons, and even neckties. Recently the writer attended a school where missionaries were being taught to make milk out of soybeans.

Proving that it pays to have more than one string to your bow, soybeans are going strong both here and abroad. This month boatloads of them moved out of Chicago bound for European

countries, which have increased their orders this year by about 500 per cent. Consumption here at home is also up 5 million bushels over last year. This year's crop is estimated at 75,000,000 bu., 31 per cent larger than last year, and 15 times bigger than 15 years ago.

Last year, there were about 50 mills in this country refining soybean oil, and as many more making soybean food products and soybean flour; also more than 75 factories turning out industrial products from the bean.

PROPOSE NICKEL-A-HOG FUND

Lard is getting tired of taking a back seat and letting the vegetable shortenings take all the profits. A sales plan to win back the housewife's attention and favor is being urged by National Swine Growers Association and all who are interested in porkers. Plan calls not only for newspaper and magazine advertising campaigns, radio programs, home economics lessons for the public, but also for thorough-going co-operation of agricultural colleges, farm organizations, government agencies, community organizations, banks, retail stores, chains, etc. To swing such a campaign, it is figured that producers would need to contribute a nickel a head on the 40,000,000 hogs marketed each year. This would raise \$2,000,000, and sum could be doubled if packers matched farmers' contribution. Whether plan is put into effect depends on willingness of hog farmers to start the ball rolling.

MORE FARM WOOD LOTS

Held in Syracuse, N. Y., this month was a two-day hearing to give farmers, private forest land owners, and forestry extension service leaders a chance to air their views on development of a farm lot forestry program.

Hearing was one of a series to be held throughout the country in accordance with a resolution introduced into Congress by Representative Fulmer, who has been active in sponsoring important legislation on national forestry problems.

Government representative in charge of Syracuse hearing said that it "is not only a question of building up and protecting our forests but of aiding small woodlot owners and farmers who are unable to finance any reforestation work." Besides working out a scheme to aid them through legislation, he said, there would have to be a market system, or it would be useless to spend the money.

Those attending the hearing seemed to be for this kind of federal aid; but before it would be available, said the government representative, there would have to be a definite and satisfactory plan of cooperation by those to be aided.

Good Books to Read

ANOTHER CYNTHIA, *Doris Leslie*. The author has captured the gay lightheartedness of a society that whatever else it may have been was always robustly alive. Cynthia's career is a romance from start to finish.—*The Macmillan Company, New York.* \$2.50.

Good Movies to See

DRUMS ALONG THE MOHAWK. A picture to be seen if at all possible, bringing as it does the remembrances of what the settlers faced in trying to cultivate their farms and make their homes in the wilderness, while the Indians, urged on by the British, constantly attacked them and devastated their homesteads. The Technicolor is especially fine.

THE OLD MAID. Bette Davis does a brilliant job in the role of a girl with an unhappy love affair, an illegitimate baby, and an embittered old age. Also playing fine role is Miriam Hopkins. Story makes a splendid picture, told with subtlety, courage and restraint.

A Real Thanksgiving for DAIRY FARMERS!

BESSIE, YOU DID
YOUR PART... NOW
WE FARMERS,
**WORKING
TOGETHER**
HAVE DONE OURS!

Check for
October Milk
Bessie

DAIRY farmers today are thankful that they received the highest price they have been paid for October milk since 1930. This splendid achievement has been brought about ENTIRELY by the efforts of the farm cooperatives working together with State and Federal help.

Dairy farmers today are thankful for the laws which permitted them to build a plan to market their own milk. They are thankful that such a plan has been built and approved by the United States Supreme Court as within the law. They are thankful that they are privileged to continually improve the plan so as to make it work constantly for the betterment of dairy farmers. And farmers also are thankful that this plan promises continuing good milk checks during the months to come.

They are thankful that this plan which enables farmers to share markets equally and share the burden of the surplus equally, rewards industry, initiative and economy of production.

Today farmers are thankful that despite the strife which has existed in the dairy field, the producer cooperatives have been able to work together to bring about this larger milk check.

They are thankful that today there is more unity among farmers and farm cooperatives than has existed throughout the entire life of the milkshed. And they are more determined than ever to work together and prove that they are worthy of the

trust—that they are able collectively to run their own business.

Dairy farmers are thankful that they live in a democracy where citizens are given the right to own property individually, and the government guarantees its protection.

Dairy farmers are thankful that they live in a democracy which gives them the legal tools to set a price on their own milk.

On this Thanksgiving day, we dairy farmers are grateful that the fundamental principles on which this great country of ours was built still exist—free press, free speech, protection of property, independence of thought.

And finally, the thousands of farmers who are working together through their cooperatives in this Metropolitan Bargaining Agency are happy over the rewards which have come to us after three long, bitter years of struggle. In the face of all efforts to stop us, or to turn us from our purpose—in the face even of unfavorable court rulings—the Bargaining Agency has hewed straight to a single line of action, and has refused to give up the principles of marketing which it knew to be right.

No greater lesson of the effectiveness of cooperative strength could be found than is shown in the price for October milk. And we won this better price in the legal American way. While this price does not give farmers all they deserve today, yet we feel that every dairy farm home has a real right to be thankful this Thanksgiving day.

Published by the Thousands of Farmers
Who Through Their Cooperatives Constitute The Metropolitan Milk Producers' Bargaining Agency

There are *Three Important* **POINTS** to Consider when you Buy **TRAVEL ACCIDENT INSURANCE**

THE NEED

LAST YEAR 12,500 persons were struck and killed by motor vehicles - - - 19,900 were killed when the car in which they were riding was wrecked - - - nearly 1,000,000 more men and women were injured in such accidents. Some are still on crutches suffering untold pain. Your chances of being injured are increasing.

THE POLICY

TO MEET these changing conditions we offer a new policy through our agents. This policy sells for \$2.00 a year and pays:

- \$1,000.00 - for loss of Life
- 1,000.00 - for loss of Sight, or both Hands, or both Feet
- 500.00 - for loss of a Hand, a Foot, or Sight of an Eye
- 10.00 - a week for as many as thirteen (13) weeks while totally disabled and unable to work.

THESE BENEFITS ARE PAID ON AUTOMOBILE, TRUCK, WAGON, SLEIGH, BUS, RAILROAD TRAIN AND PEDESTRIAN ACCIDENTS AS PROVIDED FOR IN THE POLICY.

THE COMPANY

*North
American
ACCIDENT
Insurance
Company*

FOUNDED 1886

BECAUSE of the faithful services rendered policyholders during the past 53 years, the North American Accident Insurance Company is "*the Oldest and Largest insurance company in America writing health and accident insurance exclusively.*" You can deal with the North American with perfect confidence.

Protect yourself and your loved ones with a North American Accident Insurance Company policy.

10 N. Cherry St., Poughkeepsie, N. Y.

Subsidized Distribution

By LELAND SPENCER.

IN A PREVIOUS article, we tried to explain the "stamp plan" and other methods of distributing farm products with government subsidies. Just recently Mr. Milo Perkins, who is President of the Federal Surplus Commodities Corporation, gave an interesting report on the operation of the stamp

Leland Spencer

plan. Some of his statements are well worth quoting here because they reveal what members of the administration think about the effect of the stamp plan and about its future development.

Mr. Perkins says that "the stamp plan makes possible a much broader market for farmers producing those commodities for which there is an elastic demand,

such as dairy products, poultry products, fruits and vegetables." There can be no doubt that people will take more of nearly all kinds of products when one-third of the cost is paid by the government, as is done under the stamp plan. In other words, the stamp plan and other subsidies that help to increase the consumption of farm products are a good thing for farmers as well as consumers who have too little income to buy what they need.

But subsidies will not solve the problem of under-consumption or over-production. In the first place, they are a heavy burden on the taxpayers. And in the second place, farmers and everyone else will be better off when consumers can buy what they want out of their own earnings. Mr. Perkins evidently had this in mind when he said, "A man with a job at good wages provides the farmer with a broader market than we can afford to make possible through our food stamps." It is very encouraging to find that at least some members of the administration hold firmly to the belief that *recovery* and *re-employment* rather than permanent *relief* are the proper objectives of government policy. And yet, Mr. Perkins believes there will always be surpluses of certain crops, and a considerable number of families that are unable to buy as much of farm products as they need. His suggestion is that the F.S.C.C. and the stamp plan be continued permanently with a flexible organization that can contract or expand as the need for its services changes.

As stated in the previous article, milk has not yet been included among the products distributed under the stamp plan. A scheme of subsidized distribution, similar to the Boston plan, has been started in Chicago, but the cheap milk plan for New York seems to have been side-tracked. A limited quantity of milk, about 50 to 60 thousand quarts a day, or about 2 per cent of the total supply, is being sold at 8 cents a quart through the baby health stations and welfare depots. This is a cheap method of distribution since the milk is delivered to the depots in good-sized truckloads and handed out to cash-carry customers within a two-hour period in the morning. However, under present conditions, the actual

cost of this milk is at least 9 cents a quart. That includes about 6 1/4 cents paid for 3.7 per cent milk at the country plant, and a minimum of 3 cents for country handling, transportation, processing, and delivery.

As I stated previously, a provision was included in the recent amendments to the federal milk order for New York whereby a special Class 1 price of \$2.25 per hundredweight instead of \$2.82 will be paid for any milk that is bought for distribution under a federal subsidy plan. Apparently this provision was written into the amendments at Washington and was never discussed in the open as it should have been. I question whether this arrangement is fair to the farmers, and I doubt whether it is a good policy. It can only be justified on the ground that the milk so purchased will be added to the quantity regularly consumed in the market. No one can say how much more milk the relief families of New York City would use if it were offered to them at 5 to 7 cents a quart instead of the 8 to 12 cents which they now

pay for it at the welfare depots and stores. Possibly they would use 25 to 50 per cent more. But one thing is certain: As soon as these families were able to get the cheap milk, they would cut down on their purchases through regular channels. In other words, the farmers would lose a certain amount of business at the \$2.82 price and would gain somewhat more at the \$2.25 price.

At least until we know more about the effects of these cheap milk plans, I believe the government should foot the entire bill for milk subsidies as it has for the stamp plan and all the other activities of the F.S.C.C. I can see no valid reason why the fluid milk producers should be treated less generously than producers of butter, lard, wheat, corn, prunes, rice, oranges and grapefruit.

Again, with respect to amendments that are proposed from time to time to the state and federal orders for the New York milk market, there is one change in procedure that should be made. When several amendments are placed before the producers for a referendum vote, there should be an opportunity to vote on each one separately. That is the regular practice in voting on propositions in the fall elections, and is the only sensible plan to follow.

Something New in Milk Distribution

BEGINNING Monday, November 13, housewives in Brooklyn, New York, were able to buy milk in two-quart cardboard containers at a saving of 1 1/2c a quart. Both the Borden Company and Sheffield Farms Company are adopting this new departure in the distribution of milk. Gradually two-quart paper bottles will be made available to housewives in other parts of New York City.

The development of this new idea will be gradual, because the American Can Company, which makes the cardboard containers, is unable immediately to fill large orders for containers that would be necessary to supply everyone in the metropolitan area. For the present at least, the two-quart bottles will not be available to housewives of suburban areas.

The possibilities of two-quart cardboard bottles are exceedingly interesting. Most important, naturally, is the money saving to consumers, which comes at a time when there has been much discussion over the increased cost of milk. By accident rather than intent, the announcement comes soon after a new agreement between milk distributors and labor unions, giving union drivers and some other employees pay increases of \$2 a week. Distributors have estimated that these pay increases will add from \$70,000 to \$100,000 each week to the cost of handling and distributing milk. When the union agreement was signed, announcement was made that milk in glass bottles would cost consumers 1/4c a quart more.

Dairymen naturally will feel that increased wages to milk drivers is unwarranted, but that is something over which milk dealers do not have control.

Experimental work to iron out possible difficulties in handling milk in two-quart containers and to see how the innovation would be accepted by housewives has been going on for some time. It is estimated that the average driver handling milk in glass bottles has to lift 12 tons every week, and that the complete substitution of cardboard bottles would cut his weekly lifting exercise to 5 tons. Drivers are paid partly in salary and partly in commissions. It is expected that the lessened weight of cardboard containers will give drivers more time to act as salesmen, which will be to the advantage

both of drivers and dairymen, insofar as it helps to increase milk consumption.

There is another angle to the question of increased consumption. It is probable that many housewives will buy two quarts of milk instead of one in order to get the saving. This may result in every other day delivery to some consumers who only use a quart a day, but with milk handy in the refrigerator, and with plenty of advertising to convince consumers of the food value of milk, it seems certain that consumption will be stepped up. On the other hand, no housewife will be compelled to buy milk in the two-quart container. Milk in glass bottles will be available so long as there is demand for it, and so long as the consumer is willing to pay the extra 1 1/2c to have it.

From the housewife's point of view, the new container will be handy. It is rectangular in shape, light in weight, and easy to handle, and takes up no more space in the refrigerator than a one-quart glass bottle. Because they are not as rigid as glass bottles the two-quart containers are not filled absolutely full of milk. Consumers can rest assured, however, that there are two full quarts of milk in the bottles, because they are automatically filled.

Housewives will also welcome the release from the washing of bottles and putting them out. Cardboard containers are used but once. From the milk dealers' point of view there will be less lifting all along the line because of the lighter weight of the cardboard bottles, and it is believed also that savings will result in losses which in the past have been suffered because of broken and lost bottles. Neither will it be necessary for dealers to go to the expense of washing glass bottles.

Both Borden and Sheffield have invested substantial sums in new equipment and materials in order to pass along savings to consumers. These savings amount to approximately 10 per cent. There is no intent on the part of dealers to assume that the introduction of two-quart cardboard bottles will solve all of our milk marketing problems, but it is a step in the right direction, and one which dairymen will approve. It is the milk industry's answer to the demand of consumers for more milk at lower costs.

Going to CALIFORNIA?

See the Pacific Northwest
AT NO EXTRA FARE!

You'll never forget the scenery from windows of the North Coast Limited! Glittering snow-capped peaks of the Rockies—28 ranges of them! Waterfalls, forests—and rivers winding for over a thousand miles!

The Pacific Northwest, beautiful all the year 'round, is especially gorgeous in autumn—dazzling in winter. It costs no extra fare to go this scenic Northern Pacific route, so why not find out all about the trip? Just mail the coupon and let us tell you of accommodations to suit your taste and purse.

The National Plowing Champion

Carl Hagemann, winner of the 62nd annual Wheatland, Ill., Plowing Match, shows the cup that was presented to him as the new National Champion. Hagemann's work was adjudged within $8\frac{1}{2}$ points of perfect plowing. The score was based on his opening furrows, the conformation, straightness and evenness of his furrows, plus the general neatness of the finished land. The new champion has long been a serious contender for top honors and signalized his championship aspirations this year by winning first place in the Troy Plowing Match near Aurora, Illinois, just a week prior to the Wheatland event.

Coupon Clippers

One of the easiest ways to send in the coupons which appear in advertisements is to cut them out and paste them on a penny post card. If you haven't already done it, look through the last issue of *American Agriculturist* and note the amount of information you can get in this way. Note particularly that the sending of any coupon puts you under absolutely no obligations.

Beginning on page 6, use the coupon and get a copy of the "Farmers' Meat Book" published by the INTERNATIONAL SALT COMPANY. This is meat preserving time, and the book gives you in a handy way the directions you will need.

Next, turn to page 11. You may be considering the purchase of a new milker or separator. The DE LAVAL coupon will bring valuable information.

Or it may be that you are thinking that next year will be the year to put up a silo. Don't wait until next fall before you begin to check around. A post card to the MARIETTA CONCRETE CORP. of Marietta, Ohio, will bring you interesting facts.

On page 12 there is an offer of another valuable booklet by HENRY DISTON AND SONS. Get it and keep it in a handy place in the shop. Follow the directions you will find, and you will be surprised to note how much better your tools will work.

Right below it is an offer of a book giving plans for concrete building. This is another book that will pay you to keep handy, and you can be assured that it will be handy when you start to build. The PORTLAND CEMENT ASSOCIATION has other similar booklets to meet particular problems.

On page 15 there is an offer by WEYERHAEUSER SALES COMPANY of a booklet explaining the advantages of white pine lumber. This company also has available plans for most farm buildings.

You will find that some advertisements do not carry coupons but do offer catalogs or information. All you need to do is to send them a post card.

BETTER SPRAYING

It is reported that the shows in the amusement area at the New York World's Fair were disappointed by lack of patronage. One reason advanced was that the commercial exhibits were so interesting that they stole the show. In the opinion of the writer the Du Pont exhibit was

close to "tops" in interest, showing as it did the developments in the manufacture of farm and home equipment, some of which seemed like magic. We have just received a copy of the "Grasselli Spraying and Dusting Schedule," published by E. I. DU PONT DE NEMOURS COMPANY of Wilmington, Delaware. It is full of information about spraying for insects and diseases. Thinking you might like a copy too, we are passing the word along that a post card addressed to this company will bring it.

BETTER AUTOMOBILES

Leaders in the automobile field are optimistic about the prospects for a good year ahead. The history of the automotive industry is a thrilling example of the ability to put out each year a better product without increasing cost, or at a reduced cost. This is done by continual experimenting and by continued advertising to widen sales.

Back of the scenes is a constant grueling test of the ability of cars and tires to stand up during continual usage — something about which the public hears too little. Stock cars are taken off the assembly line and subjected to dare-devil driving over all sorts of roads and under all sorts of conditions, giving a car, in a week's time, a more severe test than any driver would give it in three years. If any part doesn't stand up, the engineers are hauled on the carpet to revise or improve it.

CLEAN MILK

While most bulletins put out by advertisers are free, there is an occasional one which costs so much to prepare that the manufacturer must charge for it. Such is "The Production of Clean Milk," published by the CHICAGO FLEXIBLE SHAFT COMPANY of Chicago, Illinois. It costs 35c, but if you take pride in producing milk that will pass all sanitary tests, you will find it worth the cost.

KEEP THE SOIL FERTILE

Most farm problems are in some way connected with soil fertility. Winter is a good time to brush up on our knowledge of this subject, and an excellent way to do it is to drop a post card to JOHN DEERE, Dept. E-164, Moline, Illinois, asking for a copy of "Soil Fertilizers." You will find 44 pages of excellent suggestions and down-to-earth information on lime, fertilizers, legumes, farm manure and cultivation.

NEARBY MARKETS for NEARBY POULTRYMEN

"A Setting of Eggs"

By H. L. COSLINE

SMALL beginnings sometimes make for big endings. Don't interpret that as meaning that Mr. C. B. Cox of Adams Center, Jefferson County, N. Y., has reached his goal. He still has plans, but he couldn't have started much smaller when twenty years ago he went into the chicken business with one setting of eggs. Today he can house 2,400 layers and hatches about 45,000 chicks every year.

"Before I went to war", said Mr. Cox, "I was dealing in farm machinery and farm supplies. Maybe I would be at it yet if the Doc hadn't told me to get outdoors or else! So we came to this farm which had been in my wife's family and started in with little except ambition and hopes.

"I kept down the cost of the first house I built by using old lumber. It was 12 ft. wide and 50 ft long, which of course was too narrow, so some years later I added to it by increasing the width to 24 ft. Then we built a barn out of two old barns, which now houses a few cows and our incubators. Since that time we have gradually expanded. We believe in living as well as making a living, so we made improvements in the house as we went along.

"We made our first venture into artificial incubation by securing a second-hand machine of 244-egg capacity. We were frankly told that it had been noteworthy for its failures rather than its successes, but we followed directions closely and the results were good. Our buying of this machine came about in this way. I had been reading in college bulletins that early hatched chicks were more profitable than those hatched later in the season, but the hens wouldn't cooperate. They wanted to lay instead of set. Later, of course, we bought bigger machines and gradually began to hatch more eggs.

"I never have bought much breeding stock, but have concentrated on the task of breeding hens for size and capacity. The big part of the eggs I set are laid by old hens, and for some years now I have made a practice of buying back the good old hens from customers who bought chicks from me, and who wanted to dispose of the old birds in order to put in pullets."

"How do you sell your product?" I asked.

"A good many of my eggs go to a special customer in New Jersey," Mr. Cox replied. "I have shipped to him a number of years and he always makes good returns. However, he doesn't take my whole supply, so I ship some to receivers in New York City.

"We gather the eggs three times a day in wire baskets and bring them into a cellar which has a sand floor to provide moisture. We pack and ship them twice a week, but because the eggs are so large, we do not find it necessary to do much grading. For example, I recently shipped six crates and among them were only fifteen dozens that had to be sold as mediums.

"We also kill and dress a good many birds every week, and these are sold to stores in Watertown. I am hoping to put in a cold storage plant to hold about 2,000 lbs. of meat. In this way I feel that I can branch out and broaden my market."

Mr. Cox is a firm believer in the necessity for disinfection. Whenever the laying pens are cleaned out, he soaks the floor thoroughly with a solution of coal tar disinfectant. Another sanitary measure is to use permangan-

C. B. Cox of Adams Center, Jefferson County, N. Y.

ate of potash or a commercial chlorine disinfectant in the hen's drinking water.

Perhaps we should inject a word of caution lest others without farm experience should conclude that poultry keeping is a rosy road to wealth and happiness. There are plenty of problems, and it is probable that it is even more difficult now to start from scratch than it was when Mr. Cox made the break. He has secured results by exercising thrift, caution and common sense, and testifies that he is far more contented and happy than when he was working in the city.

Calfhood Vaccination for Bang Abortion

(Continued from Page 6)

be pushed and completed within a reasonable period. The per cent of Bang abortion infection in most areas is only about half as high as was the case with TB. Therefore, the total cost of eradication of Bang abortion might be about half the cost of eliminating TB which, in the case of New York State, ran better than \$60,000,000. Added to that cost are the staggering losses suffered by dairymen who tried to produce milk with sick cows.

If uncontrolled calfhood vaccination becomes common, or we might say somewhere near universal, then it follows that we must resign ourselves to living with the disease rather than attempting to eradicate it.

The State of Vermont has recognized calfhood vaccination in some new legislation. The law provides for a free initial blood test, after which the dairyman can decide which of four plans of Bang abortion control he would like to follow. Following is a brief summary of the four plans:

- He can dispose of all reactors to the blood test to other herds known by blood test to be infected.
- He can maintain two separate herds — one a reactor herd and one a clean herd until he thinks it is feasible to dispose of the reactors to other herds known by test to be infected.
- He can vaccinate all calves before they are eight months old and dispose of all reacting animals over eighteen months old to other herds known to be infected.
- He can follow the federal-state test and slaughter program and get indemnities.

Under plans A, B and C no indemnities are available. It remains to be seen how this plan works out. If it is successful, it is probable that something along that line will be adopted by other states.

Your Questions Answered

All-Night Lights

What is meant by the term "all night lights," what are their advantages, and how are they used?

As the term indicates, some poultrymen leave a ten-watt bulb burning all night—in fact, two of them in each pen—one three or four feet above the water fountain and another about the same distance above the mash hopper. This allows the hens to get off the roosts to eat or drink during the night. If a hen's crop gets empty, she gets hungry and cold and is likely to slump in body weight and then stop production. It is just another way of using lights to increase feed consumption, and some poultrymen have found it very satisfactory.

* * *

Wet Mash

Is it advisable to feed wet mash in the hopper on top of the dry mash?

The first part of the question might well read, "Should wet mash be used?" Most poultrymen prefer not to feed wet mash steadily, but to reserve the use of it as a stimulant at a time when the birds drop off in production. I know of several poultrymen who like to put wet mash in the hopper on top of the dry mash. I can see no objection to the plan. Mix the mash so it is crumbly. In other words, don't get it too wet and the birds will clean it up quickly.

* * *

Beets

Are beets a good source of green feed, and what is the best way to feed them?

Strictly speaking, roots should be classified as a succulent feed and not as green feed as they are not a substitute for sprouted oats or cabbage. Beets are not well supplied with vitamins, but they are palatable. A good way to feed them is to stick them on nails in the wall. Do not feed too much. From three to five pounds per hundred birds each day is enough, and they are usually fed at noon or in the afternoon. Beets are not high in nutrients, and if the hen eats too much, she may not eat enough mash and scratch grain to keep up her body weight.

* * *

Cannibalism

How can I prevent my hens from picking each other?

It is easier to prevent cannibalism than it is to stop it once it is started.

"Here Lad—d'yuh ever see in th' inside of a drum?"

There are several appliances on the market that will stop the difficulty. Roughly they can be divided into three types. One is a shield which covers the vent and prevents picking that way. Another is pigkards which are attached to the beak by a wire through the nostril, and the third is in the form of colored spectacles which are also attached through the nostril.

Probably our grandparents would have laughed to see a flock fitted with any of these contrivances, but they work and you will see a lot of flocks equipped with them. There may be a slight drop in production when beak guards are used, but the hens soon become accustomed to them and after that there is no trouble. Some poultrymen put them on when the pullets are put into the pen.

Another method which is less costly in cash, but which takes some time, is to make a cut with a pen knife on each side of the upper beak about 1/4" from the end, and then break off the point of beak. This makes it as sensitive as when you cut your finger, and it prevents picking. When the beaks have grown out again, the chickens have forgotten the urge to pick each other.

* * *

Heavy Production

I have a pen of pullets that are producing about 75 per cent. Is there a danger that they are producing too heavily?

You should be congratulating yourself instead of worrying. A lot of folks would like to have birds produce that well. Evidently you have a flock bred to produce, and there is no reason why they shouldn't lay 75 per cent if you watch them closely to see that they don't lose body weight. There are records of plenty of individuals who have laid at the rate of 75 per cent for the entire year, and seemed none the worse for it. Naturally, in a flock producing at the rate of 75 per cent, there are some individuals producing far heavier than that, but don't worry. Feed them adequately and be thankful.

* * *

Sprouted Oats

What is the easiest way to sprout oats for my chickens?

The first thing you will need is a room where you can maintain a temperature between 60° and 70°. To minimize mold trouble, soak the oats in water to which formalin has been added at the rate of one teaspoon to six quarts of water. A good way is to build a rack where trays about two feet square can be slid in on slides that are about 9" apart. The square trays let you turn the oats so they can make the best use of light. The oats are fed when the sprouts are from 2" to 4" long at the rate of 1 to 2 sq. in. per hen once a day. There is no question but that hens like sprouted oats, and more of them would be used if it weren't quite so much trouble to sprout them. Some poultrymen use germinated oats. That is, they soak them to make them more palatable and feed them just as they begin to sprout, which usually takes about a week.

I have a pullet a little over five months old which laid a double egg—an egg within an egg. The outer shell measured exactly 9 1/2" x 7 1/2". This contained the white of an egg and another perfectly formed egg of medium size. Both eggs had normal shells.—Harry C. Moyer, Wassaic, Dutchess County, N. Y.

We Want Several Young Men

to work up in our organization. We are gradually expanding year by year, and need superior quality men whom we can train to work up into important positions in running the business.

We are going to be very particular in whom we choose. Each man must undergo exacting tests to prove his ability because he must learn the business from all angles. There is no use writing us if character, health, energy, willingness to learn, and to take the severest tests are not in you.

Investigation will even go back to what has been done during idle hours, during vacation, and helping parents; as well as appearance, personality, voice, health, and neatness.

If you are between the ages of 18-28 and feel you are reasonably qualified according to the above, write for our questionnaire. Farmers' sons will have first preference.

If questionnaire and first investigation is satisfactory, applicant must come to our Mill office for further investigation.

VITA-VIM MILLERS

DOWN THE
Alley

By J. F. (DOC) ROBERTS

HAY SHORTAGES, or rough feed shortages, always produce unusual and unexpected situations, and probably this year will be no exception. After the drought in the summer of 1934, everyone anticipated that our livestock receipts, particularly of fed animals, would be very short in the spring of 1935, and yet just the reverse was the case, probably because everyone figured the same thing and carried their stock into the late spring. One of the ways that this was done,

BODINE'S

Pedigreed LEGHORNS

New York State's Largest U. S. R.O.P. Breeding Farm.

In U. S. R.O.P. Trapnest we produced
44% in 1937

Allen H. Bulkley, Odessa, N. Y.

and which again may be helpful this year, was by quite a general use of molasses. Half water and half molasses sprinkled on the straw makes a very satisfactory substitute for hay; straight molasses poured on cut-up corn stalks makes a palatable and usable feed. A good many men through our feeding sections kept their ensilage cutter set up all winter and cut up a 48-hour feed right on the barn floor. By allowing it to heat over this 48-hour period, it became soft and yet unspoiled, and by mixing grain with it, they had a good feed. I want to caution against too much of a bullish attitude toward the future hay market when there are so many ways of using substitutes.

There are about as many feeding lambs and cattle on feed in the Northeast right now as usual, but we may be in a very favorable position as compared to the rest of the country because we do not start feeding as early in the fall and we do carry our feeding later in the spring than most other sections. This year, according to Government reports, there are more lambs and cattle on feed right now than a year ago; but inasmuch as the great bulk of feeding stock was put in much earlier this year — that is, during July, August and September — than most years, they feel that the number on feed after the first of January will be smaller than a year ago. We did not put our feeders in any earlier than usual, and in most cases later, particularly with lambs. This would indicate that shipments of livestock will be heavy between now and the first of February and very much lighter after that time. I believe that this is accurate enough so that the average livestock man in the Northeast can well consider it.

Thinking of farm marketing the other day, I got to wondering what automobiles would be bringing if they were sold in the hit and miss way that farm products are. Industry is showing us how to get distribution and still maintain price.

New England Holstein Sale

Holstein breeders who want to add some excellent cows to their herds will be interested in the New England Breeders sale which will be held in the Brattleboro Sales Pavilion, Brattleboro, Vermont, on Tuesday, December 12th. The sale will start at 11 a. m. There will be from 40 to 50 fresh cows or Springers for sale, also 5 bulls. All animals to be sold are from T.B. accredited herds and gave a negative blood test for Bang's Abortion.

Keep Tractor's Nose Clean

(Continued from Page 7)

where it causes very rapid wear. Another condition which causes muddy oil to carry over is the collection of lint

or chaff on the lower portion of the air cleaner. Another possible source of trouble is the air inlet passage. Engines occasionally backfire, forcing oil into the air inlet. The oil wetted surface of the air inlet collects dust which may build up and obstruct the air inlet passage. This results in loss of power and increased fuel consumption. The air inlet passage should be inspected at regular intervals and dirt obstructing it should be cleaned out.

To obtain longer engine life, tractor engineers suggest that the following routine be observed:

1. Clean and change oil in oil cup of air cleaner once a day to prevent muddy pull-over.
2. Inspect cleaner element frequently for lint or chaff.
3. Inspect and clean accumulated dirt from air inlet regularly.
4. Inspect air cleaner connections for leaks.
5. Inspect crankcase breather frequently.

We're Off to Western Wonderland

(Continued from Page 5)

ry the men who had settled there and wanted to establish homes.

In our next issue we will publish a complete itinerary of the trip. In the meantime, if you think you can possibly get away to come with us on this tour, fill out the blank below and mail it to Mr. E. R. Eastman, Editor, *American Agriculturist*, Box 367-T, Ithaca, N. Y. This will bring you full details, including the price of the "all-expense" ticket, which includes every cent the trip will cost you, except for such personal items as souvenirs and laundry. The cost is reasonable, less than it would be if you were taking the

trip alone; and remember that when you travel with us, you don't have to worry about spending more than you bargained for. Before you leave home, you know exactly what the entire trip will cost, and you can leave travel worries and, if you wish, your pocketbook behind you.

Decide now to come with us, and send in the blank today. It is not too early to make up your mind, for if anything should happen later to prevent your going with us, we will promptly cancel your reservation and return any deposit paid.

Dear Mr. Eastman:

I am interested in your Western Wonderland Tour, February 24 to March 19. Please send me without any obligation on my part, full information regarding cost of trip, with complete itinerary. (Write Plainly)

AN EASY DINNER TO PREPARE, and one which draws most of its supplies from the cellar, is the Dutch oven dinner, shown in the picture at the right:

2 to 3 pounds beef, round, rump or chuck	1/8 teaspoon pepper 1 cup water	1/4 cup New Orleans molasses 2 tablespoons flour Vegetables
---------------------------------------------	------------------------------------	-------------------------------------------------------------------

Rub meat with salt. Sprinkle with pepper. Brown on all sides in hot fat. Place in Dutch Oven and add water and molasses. Cover and simmer 2 to 3 hours. Remove meat and thicken stock with flour. Carrots, onions, potatoes, and minced pepper may be placed in Dutch oven with the meat about 40 minutes before meat is done.

—PHOTO COURTESY OF PENICK & FORD, LTD.

WHAT a wealth of possible treats the well-stocked cellar represents! Practically any part of a meal or the whole meal, for that matter, may come from its depths, and, if mixed with brains, may make really distinguished dishes.

Besides the supplies garnered from the farm or garden, cellars usually hold staple groceries, and some occasional fancy groceries for special occasions. Add to these enough fresh fruits and vegetables to furnish variety and needed protection against colds and other ills, and winter looks actually inviting.

Here are numerous suggestions and recipes for making this "living from the cellar" adventurous:

Hot Tomato Juice Cocktail

1 quart tomato juice	1/2 teaspoon Worcestershire sauce
1/2 bayleaf	Salt to taste
2 tablespoons sugar	

Heat all ingredients together and boil gently, remove bayleaf and serve hot. A dash of grated horseradish may be liked by some. The same recipe is equally good when serving the mixture cold.

Meat Pie

2 1/2 cups meat stock or gravy	1/2 cup cooked onion
4 tablespoons flour	2 teaspoons Worcestershire sauce
1/2 teaspoon pepper	Salt
1/2 teaspoon paprika	2 cups mashed potatoes, seasoned
2 cups cooked meat, diced	2 tablespoons melted butter
1/2 cup canned tomatoes	1/2 cup cooked carrots
1 tablespoon parsley, chopped	

Thicken the meat stock with the flour mixed with pepper, paprika and salt, and boil together one minute, stirring constantly. Add meat, vegetables and seasonings; turn into a greased baking dish. Spread with potatoes, sealing to the edge of the casserole and leaving an opening for escape of steam. Bake in a hot oven (450° F) for 20 minutes or until potatoes are brown. Serves six. The same mixture is delightful when biscuit crust instead of potatoes is used for a cover, and is a good way to use canned meat.

Salmon Casserole

1-1 lb. can salmon	1/4 cup butter
1 tablespoon lemon juice	5 tablespoons flour
1 1/2 cups cooked potatoes	2 1/2 cups milk
1 1/4 cups peas	1/2 cup buttered bread crumbs

Remove bone and skin from salmon and flake it. Combine salmon, lemon juice, cooked potatoes and peas. Make a white sauce of butter, flour, milk and salt. Then alternate layers of the sauce with the fish mixture in a greas-

ed baking dish. Sprinkle the top with buttered bread crumbs and bake in a moderate oven for 30 minutes (375° F.).

BREADS As for breads, surprise the family some wintry night with blackberry or blueberry muffins made from your favorite recipe with drained, canned berries added instead of the fresh ones.

SALADS When it comes to salads you can really let your imagination run riot in order to get a colorful satisfying combination. Here are some salad suggestions:

- 1—Chicken or fish, with celery, a bit of onion and shredded cabbage; moisten with mayonnaise or cooked salad dressing.
- 2—Grated carrot with shredded cabbage and a bit of onion. This may be jellied in an orange gelatin. Grated pineapple is a tasteful addition to this mixture.
- 3—Apples, carrots and cabbage.
- 4—Sliced or cubed cooked beets on a bed of shredded cabbage and a bit of minced onion; French dressing.
- 5—A combination of canned vegetables, limas and green peas with cold cooked potatoes and cooked carrots.
- 6—Chopped relishes enliven any vegetable salad.

Jellied Cranberry Fish Salad Ring

Crush 2 cups cranberry sauce (canned or homemade). Add 1/2 cup water

MRS. GRACE WATKINS HUCKETT

and heat thoroughly. Dissolve 1 tablespoon plain gelatine in cold water, and add to the hot cranberry sauce. Fold in 1 cup finely shredded cabbage and place in a ring mold until set. Unmold on bed of lettuce. Fill center with cold flaked fish or chicken and green peas mixed with mayonnaise.

If you do not have a ring mold, chill the cranberry mixture in a small pan, turn out in center of flat bowl or platter, garnish around with lettuce cups filled with meat mixture.

CARROTS and BEETS

As for carrots and beets, serving plain boiled and dressed with melted butter will do for a time. But sooner or later stored vegetables lose their flavor somewhat and need the addition of vinegar or other flavors to pep them up. Harvard beets, carrots in white sauce which has added to it either a slice of onion or a dash of nutmeg or a sprinkle of minced herbs, give the necessary zest; corn made into pudding or fritters, or combined with limas for succotash, will offer welcome variety.

TURNIPS Here are some turnip recipes by "H. R." which will keep this winter standby from becoming a bore:

Turnip Casserole

Arrange 2 cups diced cooked turnips in greased baking dish, cover with 1 1/2 cups cooked smoked ham (cut in bits) and top with 2 more cups diced turnip. Add rich milk just to cover and bake 20 minutes in moderate oven. Grand use for leftovers.

Golden Turnip

Dice enough turnip to yield 5 cups, cook in boiling, salted water until tender and season well with salt and pepper. Melt 1/2 pound sharp cheese slowly with 1/2 cup milk, pour over drained turnip and serve hot.

Turnip Souffle

Mix 4 cups cooked mashed turnips

with 1 teaspoon salt, dash of pepper, 1 teaspoon onion juice and beaten yolks of 3 eggs. Beat until light, fold in stiffly beaten whites of 3 eggs and bake in a hot oven (400°) for 20 minutes. Serve at once.

Stuffed Turnips

Cook 6 large turnips 30 minutes in salted water. Scoop out insides to leave 1/2 inch shell. Chop the turnip scrapings and mix well with 1/2 pound pork sausage. Heap mixture back into turnip shells and bake 30 minutes in moderate oven. A hit with the men.

Turnip Fritters

Cook 12 small nicely shaped turnips in salted water until tender and drain well. Dip in batter made by beating 1 egg, 1 cup milk, 1 tablespoon butter thoroughly into 1 cup flour. Fry until crisp in deep fat at 375° F.

Turnip Cakes

Mix thoroughly 3 cups mashed turnips, 1 cup soft bread crumbs, 2/3 cup shredded dried beef with 1 beaten egg. Form into cakes and brown in butter.

DESSERTS Desserts possible from the cellar supply are almost unlimited: pumpkin and squash pies, fruit cobblers and puddings, ices and ice creams using either fruits or berries, not to mention the canned fruits "as is".

Peach Rice Pudding

1 quart peach halves	1/2 tablespoon grated lemon rind
2 eggs	3/4 cup raw rice
1/3 cup sugar	1/4 cup nut meats
3/4 cup cream	2 tablespoons butter
1 tablespoon lemon juice	1/3 cup powdered sugar

Drain peaches and combine 3/4 cup of juice with beaten eggs, sugar, cream, lemon juice and rind. Cook the rice in rapidly boiling water and drain. Add rice to the cream-fruit juice mixture and pour into a greased flat baking pan. Arrange peach halves, cut side up, on top of the rice mixture. Fill centers with mixture of chopped nuts and powdered sugar, bake until firm,

(Continued on Page 20)

Cash Contest

Remember the fable of the grasshopper and the ant? How the grasshopper flitted about all summer, with never a thought to her winter needs. And the wise little ant who took care to lay by a store of summer's lavish supplies for a time when they would be scarce? Well, grasshoppers won't be interested in this contest. We want to hear from farm women (and men) on the subject of what farm foods they have managed to preserve or store for winter use. *American Agriculturist* will pay \$5.00 for the best letter telling how you have stocked your cellar to provide a good winter "living" for your family; also, \$1.00 for each of the next five best letters. Address *American Agriculturist*, "Full Cellar Contest", Box 367, Ithaca, N. Y. Letters must be mailed not later than December 7, 1939.

Finishing Touch

By MILLICENT BLODGETT.

God creates a mountain
And views it from afar;
Then, not content with work that's
done,
And mountains as they are,
Climbs higher — higher — into mist,
And crowns it with a star!

stunning range of colors and patterns in the new fabrics makes it possible to suit every complexion and build. A skull cap and a single breasted jacket variation are included in the pattern which runs in sizes 4 to 14. Size 8 requires 1½ yards of 54-inch material, 1¾ yards 39-inch lining for jacket featured; 1¼ yards 54-inch for trousers.

TO ORDER: Write name, size and address plainly, and enclose 15c in stamps to Pattern Department, *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our Fall and Winter Fashion Book.

Some Ways of Saving Plants for Next Year

My gloxinia continues to stay green, but as soon as it begins to turn yellow I shall let it rest and not give it any more water. I am advised to leave it in the pot in a frost proof cellar until late in the winter and then re-pot it for next year. This particular plant has been in the sunporch all summer. If it had been growing outside it probably would winter over nicely in a dark cold frame. Other tender perennials ought to be moved into cold frames.

Some of the newer cannas are hard to keep, but seem to do better if left with a clump of earth upon them. These clumps may be packed in boxes of earth or close together on a cellar floor. If the floor is cement, the earth may be piled around them.

Speaking of storing in the cellar — if you have never forced rhubarb this is a good time to try it. Take a few strong clumps with a large ball of soil and leave in a shady spot until thoroughly frozen. The clumps can then be brought in any time until well after the first of the year. While outside, keep burlap over them to prevent washing away of the soil.

Tender hydrangeas in tubs winter over nicely if kept in a cool, dark cellar at about 55° F. They should not be overwatered but kept a little on the dry side. If you wish to change the color of your hydrangeas from pink to blue, while the plants are being ripened or rested is the time to apply alum to the soil. In each 6 inch pot, put 3 pieces of alum the size of a small fingernail in holes made with a stick.

Lemon verbenas get off to a better start next spring if wintered over in a cellar at about 50° F. They keep best planted in a box with earth about the roots.

I have known women who kept their stock of outdoor geraniums in the cellar through the winter. They dug them with a small ball of earth, tied them together loosely in bunches, and kept them just moist enough to prevent the soil from crumbling away altogether. The tops died back and in the spring when roots were set out again, these dead tops were cut back. The chief advantage of this method is the little space and attention required for storage as compared with trying to keep them growing actively in a window garden.

Be Smart!

THE CLEVER woman makes her clothes play up her good points and minimize her poor ones. The larger woman certainly does not want to add to her apparent size and the present vogue for dull blacks is very much in her favor.

DRESS PATTERN No. 2981 is for the basic dress which is the foundation of the thrifty woman's wardrobe. It may be dressed up or down with accessories and worn every place. It also gives a number of neckline and sleeve treatments. Sizes are 14 to 48. Size 36 requires 2½ yards of 54-inch material.

GIRL'S SNOW SUIT PATTERN No. 2817 is for that universally popular outfit worn by child and adult. Besides being delightfully becoming, a snow suit is a wonderful saver of other clothes, both dresses and coats. The

For Quick Cough Relief, Mix This Remedy at Home

No Cooking. No Work. Real Saving.

Here's an old home remedy your mother probably used, but, for real results, it is still one of the most effective and dependable for coughs due to colds. Once tried, you'll swear by it.

It's no trouble. Make a syrup by stirring 2 cups granulated sugar and one cup water for a few moments, until dissolved. No cooking needed—a child could do it.

Now put 2½ ounces of Pinex into a pint bottle, and add your syrup. This makes a full pint of truly splendid cough medicine, and gives you about four times as much for your money. It keeps perfectly, tastes fine, and lasts a family a long time.

And you'll say it's really amazing for quick action. You can feel it take hold promptly. It loosens the phlegm, soothes the irritated membranes, and helps clear the air passages. Thus it makes breathing easy and lets you get restful sleep.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action on throat and bronchial membranes. Money refunded if not pleased in every way.

The "Road-Measurer"

PART II.

To earn money for school expenses, Addison agreed to wheel a road measurer to get data for a county map. He ran into difficulty when everyone stopped him to inquire the purpose of the road measurer, a funny contraption that looked like a wheelbarrow. Because explanations slowed him down and he feared he wouldn't be able to finish, Addison was annoyed. A happy inspiration caused him to quote Latin to one questioner, whereupon the inquirer left in haste, declaring Addison was crazy—a statement which Addison thought was a great joke.

By this time it was six o'clock. He sat down under a large pine by the roadside, ate supper from his basket, then went on for a mile or two, with an eye out for a farmhouse at which to pass the night. According to his record, he was twenty-four miles from home, in the township of Greenboro, where the farms were few and far between, and the farmers in rather poor circumstances.

Coming to a small, new, unpainted house, he wheeled into the yard and knocked at the door.

At last a chamber window was raised, and a woman's voice cried out, "Go away! You go away!"

Stepping back, Addison attempted to explain his need of lodging; but the woman still cried, "Go away!" and he at last did so, wondering what the matter could be, for at that time it did not occur to him that the youthful berry-pickers had given the alarm as they drove on that a crazy man was coming! He went on for a mile, most of the way through woodlands, before coming to another habitation. By this time it was long past sunset and beginning to grow dusk.

He came to a large brook where there was a sawmill, and beyond the brook a house. He wheeled over the bridge to the house, and then, seeing a light at a shed in the rear, set down the road-measurer and went around to it. The shed was open in front, and on looking in, he saw a wagon with pails of blueberries in it, and at the end of the shed a girl with a lantern. Beside her stood a young fellow in the act of feeding a white horse.

Addison recognized both the horse and the young people—the very ones to whom he had rolled his eyes and declaimed the Latin. His first thought was that he had better go on and say nothing. But he wanted a night's lodging, and supposed that he could easily explain the joke to them after they had spoken. So he said, "Good evening!" The girl turned and held up the lantern, but had no sooner seen him than she screamed and darted out at the back of the shed; the boy, too, suddenly made himself scarce.

Even then Addison did not suppose it was anything which could not be explained as soon as he had spoken with the older people of the place. In fact, he now began to think it was best to explain. He therefore went back to the house door and knocked. People appeared to be running about indoors. Addison knocked again.

At last the door opened a little way and an old man peeped out.

"Good evening, sir!" Addison said. "Can you put me up here tonight?"

Through the crack of the door the old man warily peered at him.

"None of you need to be afraid of me," Addison continued. "I was only joking with your young folk down the road. I am going around with a machine to measure the roads."

That may have sounded sane enough to one who knew about the road-measurer, but it failed to satisfy this

old citizen of Greenboro. He still gripped the door.

"Pooty tired, be ye?" he asked.

"Yes," Addison said, smiling.

"Think you could keep pooty still?"

"Oh, yes," Addison said. "I want to go to bed soon. I have had supper."

The old man slowly opened the door.

"You can come in," said he. "I will show you where you can sleep."

Addison followed him in, saying as he did so that he would like to take his road-measurer to his room with him.

"I am very careful of it," he added.

"I s'pose you be," the old man remarked, his face wrinkling in a grin.

"I make no doubt you be. Now just take a look into this room. See if it suits ye."

Addison stepped into the room to

By C. A. STEPHENS

see what it was like, but had no sooner done so than the door was clapped to behind him. He called out and tried to open the door. It was held fast, and he heard them piling furniture or boxes against it.

By the dim light he saw the outline of a small window at the rear of the room, and rushed to it, stumbling into a bedstead as he did so. But the sash of the window stuck fast; he could not get it up.

Very angry by this time, he now pulled the bedstead apart, and seizing one of the side rails, smashed out a panel of the door.

"Stop! Stop! Keep still in there!" the old man shouted, repeatedly. "Stop that, or we shall have to shoot ye!"

With that, Addison, who was generally a prudent youth, concluded that it would be foolish to rush on from bad to worse; in fact, he began to realize that he had been acting foolishly all day, and that this was the natural result of it. In calm tones he now attempted to hail the people through the door; but they paid no attention.

A few moments later he heard them nailing boards over the window—which rendered the room dark as Egypt.

What they might do next, or what he could do to undeceive them, was not very clear. He found a chair, sat down, and thought it all over. Unless he resorted to violence again there was little he could do, and he sat there for a long time.

While stumbling about the room he had stepped on a straw bed in one corner, and he now concluded that he might as well make himself comfortable and let matters take their course. This he did, with the result that he presently fell asleep; for he had been up early that morning, and had had a long, hard day.

Meanwhile these good people,—their name was Conger,—having, as they thought, a crazy man shut up in their house, determined to call on the town authorities.

One of the selectmen of the town, Asaph Kimball by name, lived at a distance of two or three miles; and the Conger boy set off to notify him and get assistance to take Addison off to an asylum.

The selectman turned out, roused up two neighbors, and reached the Conger place just as day was dawning.

The noise they made removing the barricade at the door waked Addison. Before he could get up, Kimball and another man rushed in and had him by the collar.

"Now be quiet! Be quiet!" they said to him, soothingly.

"Oh, I am quiet enough," said Addison, laughing. He then told Kimball who he was, what he was doing, and exactly how the mistake had come about; he also showed him the road-measurer and explained its workings.

Yet so firmly had the idea that he was a lunatic taken possession of all their minds that it was fully ten minutes before he could wholly undeceive them.

Kimball burst out laughing at last and let go his collar.

"I guess you are all right," said he. "But you had better not play any more of your didoes on people."

"You may be sure I shall not!" Addison exclaimed.

He paid for the door panel which he had smashed; and the episode ended by his taking breakfast with his late

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

God's Farm

All this—God's heritage to me;
These wooded hills,
These fertile fields,
This valley with its streams;
This breeze that cools,
This cricket's song,
This open sky of dreams.

I am steward of God's farm:
To seed it, work it,
Weed and harvest it,
That it may bear rich fruit
To feed His children;
That in this soil
His Plan and Peace take root.

—Mrs. Alvah Spring,
Allegany, N. Y.

jailers.

Addison had had his lesson, and being a shrewd boy, he came to the conclusion that it would be better policy to make public curiosity help advertise the new map than to try to resist it. Before he left the Congers that morning he stuck up a placard beside the larger of the two boxes, on which he had printed the words:

THIS IS A ROAD-MEASURER.

And to all who stopped to ask questions he now replied rapidly, but politely:

"I am measuring the roads for a new county map and real-estate atlas. It is going to be a fine thing. An agent will be around to take subscriptions in the course of a few weeks. Only six dollars. Good morning!"

He rehearsed that hundreds of times during the next two weeks. It proved a good advertisement, for the map was fairly successful. If I remember aright, Addison's one-fourth interest in it netted him about ninety dollars.

"Living from the Cellar"

(Continued from Page 18)

about 50 minutes, in a moderate oven (350° F.). Apricot or pear halves may be substituted for the peach halves.

Mock Cherry Pie

1 cup cranberries	1 tablespoon flour
½ cup seeded raisins	Few drops almond extract
¾ cup sugar	1 teaspoon butter

Line a pie pan with pastry. Fill with washed and halved cranberries mixed with chopped raisins. Sprinkle with mixture of sugar and flour, add almond extract and dot with butter. Cover with a second crust, bake in a hot oven (450° F.) for ten minutes, then at 425° F. for 30 minutes.

Send for this Leaflet

"Growing" your own meat on the farm is one way to keep down expenses and at the same time raise your standard of living. Mrs. Hockett has just prepared a mimeographed leaflet giving clear, easy directions for the home canning and curing of meats. If you would like a copy of this, write to *American Agriculturist*, Box 367-H, Ithaca, N. Y., for Home Service Bulletin No. 6, entitled "Canning and Curing of Meats". Please inclose 3c to cover preparation and mailing costs, and print your name and address plainly. We have been unable to fill several requests for Farm and Home Service bulletins because the sender forgot to include name and address.

The Song of the Lazy Farmer

OUR turkey gobbler's actin' queer, he seems to sense the time of year is one that bodes no turkey good, his destiny is to be food for folks who want to celebrate Thanksgiving Day, and so his fate is to be roasted to a turn, that's why he looks so sad and stern. I don't know if that bird can read, but maybe some night when he's treed, he's listened to the radio, and so perhaps has come to know, that this year two Thanksgiving days are set aside for us to praise the flavor of his tender meat, so he ain't got much chance to beat the pot this year, his end's in sight and so he worries half the night.

If I could only make it clear to him that winter's cold and drear, that if he could dodge bein' et, he'd shiver in the cold and wet all winter long, with feet and toes that's always close to bein' froze. Perhaps that bird would understand that this here end that we have planned is after all a

pleasant end, and better than for him to spend the winter fightin' cold and chill and rheumatiz, and bein' ill. The fate of anyone, I guess, that adds to human happiness, can't be so bad, and his good deed is ministerin' to folks's need. His hour of glory in the pan is more'n comes to many a man, he mayn't appreciate his fate, but when he lies upon the plate, his noble carcass, like a prize, the admiration of all eyes, he's sure to leave behind him here, the mem'ry of a great career!

11-18

Personal Problems

For Daughters-in-Law

IN THE October 28 issue I mentioned the mistakes some mothers-in-law make, but if you concluded that I think all daughters-in-law are perfect, you are wrong. Some of them are practically perfect in their capacity to do the wrong thing.

Perhaps the greatest faults new daughters-in-law have are thoughtless selfishness and a great capacity for not taking advice. They are selfish in that they calmly accept all John's attentions and time, never thinking that it has been hard for his family to give him up and that his wife should see to it that he keeps in contact with them. All daughters-in-law do well to make it their business that the "family does not lose a son...but gains a daughter".

They should not flout advice, kindly given. No young bride likes to be criticized and have her life ordered for her, but the voice of experience is not to be given the deaf ear. When a mother-in-law kindly and sincerely offers advice, which you feel in your bones to be good and solid, don't, for sheer perversity, disregard it. Perhaps she is the peachy kind of mother-in-law who won't offer advice unless you ask for it. Make it a point to ask her...even if it's on trivial things about which you are already fully decided. She'll love you for asking her counsel; you can almost always talk her 'round to seeing things your way. Applied psychology goes a long way in getting along with a new mother-in-law.

Be appreciative of what she does for you...and voice your appreciation. Take care of the things she gives you and use them when she comes to see you. Brag on her cooking and house-keeping; mothers-in-law eat this up!

* * *

He Has a Prison Record

I have a deep and bitter problem on my heart and I am turning to you to see what you advise me to do.

A few years ago, a young man came to work for our neighbor from a distant part of the country. He was fine-looking, worked hard, made a place for himself in our neighbor's home and the community...nobody thought of him as a hired man. Last spring he went to farming for himself and a few months later, our daughter, an only child of 20, told us that she and Ed were engaged.

We were perfectly agreeable to the match and rejoiced at our daughter's happiness and have made plans to help the young couple get along in paying for their farm and equipping their home. Then came the blow...last week our neighbor for whom the young man worked when he first came to the community called my husband over and told him that Eddie had a prison record. He had served two years in the state penitentiary of a distant state for stealing a car! It was a great shock to us...our daughter does not know a thing about it, I am sure.

We do not know what we should do.

"I WAS A FOOL FOR LETTING THAT WIRE MAN CUT MY HAIR — NOW HE CAN'T GET THE BOWL OFF!"

WHO IS SHE?

"Who is the Personal Problems Editor?" ask several readers. She is a well-known writer, but a new addition to our contributing staff. She is old enough to speak from experience and young enough to sympathize with the point of view of our young folks. She does not live in the Northeast, and therefore knows no reader personally. For the present she prefers to be known as "Lucile," and you may give your problems to her with confidence. If you prefer that your letter should not be printed in this department, write "confidential". Your wishes will be observed.

Send your letters to Lucile, Personal Problems Editor, American Agriculturist, Box 367, Ithaca, N. Y.

Should we tell her and break up the match...or should we say nothing and let them go ahead? The news might get out, sometime, and what position would that put our daughter in? What of her children? She could never go to visit any of his folks, who are all living in this distant state, nor would they come out here, I imagine, under the circumstances. What do you advise us to do?—Worried Mother.

Readers...what do you think Worried Mother should do? Should she keep silent and go on as though she knew nothing? Should she demand that the young man tell his bride-to-be? Should she break up the match...or what? This is, indeed, a big problem, and one too large for one person to decide. The advice of many might indicate a balance in favor of one plan or another. Won't you write and let us know what you think these parents should do?

* * *

Adopting Children

What do you think about adopting children? Is there any risk if we have complete records on the parents? At what age is best to adopt for both parents and children? Would-be Mother.

No-one can tell you what to do about adopting children. Taking the child of others, giving it your name and expending on it all the love and care of which you are capable is one of the things about which you and your husband, alone, must decide.

There is always some risk in adopting children. Heredity goes farther back than one generation and there are undoubtedly some inherited traits and tendencies. These risks are at a minimum, however, when the child is taken from a reliable institution and the case histories of the parents are known. Early environment has much to do with a child's temperament and habits and that is up to you, if the child is taken when young.

If a couple intends to adopt children, they should do so while they are young enough to be able to withstand the wear and tear that a child can bring into a formerly well-ordered, peaceful home. I should say they should take a child before they are 40. The age at which the child is to be adopted may depend on individual circumstances; it would seem, though, that if I were adopting a child, I should want it as young as possible to have all the thrill and fun of bringing it through its stages of growth and development.

One can point to cases to prove arguments both for and against adopting children. That boy was a bitter trial to his foster-parents and finally brought them to shame and disgrace. This girl developed into a hopeless idiot in her eighth year. This boy turned out to be a fine young man and carried on for his foster-mother when the father passed away. This girl was as sweet and loving as any mother could hope for her own blood-daughter to be.

You've heard them all. Weigh them,

one against the other...think the matter through carefully and follow your own decisions. It's not a question I can answer by "yes" or "no".

* * *

Start Out Alone

Should a couple get married and live with his folks? I am engaged to a boy who helps his father operate a big farm and they have a big house. His father cannot...or will not...build us a separate house and I have wanted them to make us an apartment upstairs, but they say we can all live together. I get along with them fine, now...but will this continue after we are married? What do you advise—Bride.

You have doubtless heard the statement, "No kitchen is large enough for two cooks." It is largely true. There have been cases where a double-up arrangement has worked out successfully, but a bride who enters her wedded life under this arrangement is taking a big chance. It seems to me that your suggestion of a separate living quarters in the same house is sane and sensible and less expensive than building an entire new dwelling. If you know that they can afford it and that it would in no-wise work a hardship on anybody, it seems that you are within your rights to insist on it.

A bride who starts her married life living in intimate contact with her "in-laws"... who will see all her small mistakes and failings...does not have a fair chance at the delightful experiences to which all young brides are entitled. It's fun to make biscuits for the first time...and hang curtains... and buy pancake turners with gay red handles...and to enjoy those intimate moments alone with a young husband while he musses up your hair, tells you he loves you and seals the matter with a convincing kiss.

I'd advise you to hold out for living alone, if at all possible.

Does Your Nose Clog, Spoil Sleep

...and make you snore?

HERE'S MIGHTY GOOD NEWS...If your nose "closes up" at night and makes breathing difficult, put a few drops of Vicks Va-tro-nol up each nostril.

RESULTS ARE SO GOOD because Vicks Va-tro-nol is expressly designed for the nose and upper throat, where transient congestion often hinders breathing. You can actually feel it go to work bringing relief.

TRY IT TONIGHT—enjoy the comfort Vicks Va-tro-nol brings.

Look better. Feel better. DRINK FRESH MILK!

Kernels, Screenings and Chaff

By H. E. BABCOCK

WINTER is rapidly settling down on us at SunnYGables and with its coming there reappears in my daily schedule one of the most pleasant experiences of my life.

Each night just before bedtime I close my book or lay aside any work I may be doing, slip into my barn clothes, and with our Scotty, Mr. Skip, eagerly leading the way in the hope that with me to back him up he may be able to scare up anything from a polecat to a strange tabby on his eventful journey, I go down to our big main barn.

Intelligent But Rude

My first stop is in an outlying shed in which is housed our little herd of four brood sows and a yearling purebred Duroc-Jersey boar. There are some sacks of corn piled up in this shed and I usually throw the hogs two or three ears of it. As a result they have learned to detect my footsteps and by the time I get into the shed they are alert to greet me and to fight for their share of the corn. No other animals I visit on my nightly rounds give me such an instantaneous and enthusiastic welcome. My visit bears out the intelligence tests made on animals at Cornell University in which hogs led all other animals.

But as I close the shed door I often reflect that hogs, *while they may be intelligent, are still woefully lacking in manners.*

(Note by Editor Ed.: Dad used to say with some disgust, "A hog IS a hog!")

My next stop is in the same shed at a pen of nine Hereford heifers I bought last spring and ran at pasture all summer. Despite the fact that they had almost nothing to eat due to the dry weather, they look to me to be in pretty good condition, and now that they are on winter feed I can almost see them gain from night to night. I feel sure that the man who has bought them will be well satisfied.

Mortimer Snerd

Entering the big barn I come first to the box stalls of our new mules (our second team). The mules are just young fellows, full brothers, sorrel in color, but they have a fine start in life. If they keep on growing they will make a 3200 team, which is some pair of mules in any man's country. New to me and their surroundings, they are taking their time getting acquainted. Visiting them the other night right after Edgar Bergen's radio program, they reminded me by their attitude and their caution of Mortimer Snerd. I give them each an ear of corn and pass on to the row of standing horse stalls.

Here Jake has stabled his beloved

Jake knows a lot more about horses than I do and his record to date is such that I don't want to tamper with it.

I Move Cautiously

Passing out of the horse stables, I snap the lights on a beautiful sight—fifty uniform, dark red calves with white heads slowly chewing their cuds while they blink up at me in their contentment. If I have been careful and everything has gone all right with them that day, sometimes every one of the fifty head will be lying down, but if Mr. Skip loses control of himself at this point and barks, or if I stumble, *every calf is up on her feet in an instant, galvanized by the old terror of the wild life on the range.*

Wishful Thinking

From the Hereford heifers I climb the stairs to what is normally a laying pen for hens above them. Right

night to night I realize that the day is approaching when they can go to market, and indulge in the wishful thinking that they will net us ten dollars apiece. When the lambs are marketed, which will be by Christmas, the ewes will be sent over to Larchmont and the pen they are occupying will be filled up with pullets from the range over there.

Golden Guernseys

Our barn is built into a bank on one side so that both first and second stories are at ground level. In my nightly rounds I turn from the sheep pen on the second floor of the main barn to the Guernseys on the first floor of the wing. At this point I no longer restrain Mr. Skip and he goes bounding ahead, hopeful that he can corner a barn cat and *just as hopeful that she won't turn on him.*

In this wing are our Guernsey heifers and our little stable of family cows. Here again I like to find all of them lying down—the bedding dry and plentiful, the mangers practically clean, and an attitude of contentment which is expressed as I wander from pen to pen by little explosive sighs and grunts. I think the Guernseys have learned to expect me but they don't show it except by paying no attention to me. Their attitude reminds me of my own when someone snaps a light on in my bedroom. They just hope I will leave them alone and get out as quickly as possible.

A Breathing Test

Above the pen of sheep in the main barn and the Guernseys in the north wing are laying pens for 1500 hens. Part of them are filled with Rhode Island Reds and the rest with White Leghorn pullets. I climb the stairs up to these pens after cautioning Mr. Skip that he must be quiet, and take a quick glance at the egg charts at the head of the stairs. Then I quietly open the door to each pen and stand and listen.

If the breathing is quiet and regular, I'm happy—but if I hear a choking or wheezing I'm instantly alert. Five hundred hens in a pen are an economical unit—but *not a safe one*—hence my breathing test and my anxiety as to what I shall hear each night.

With the hens checked my next stop is at the turkeys. Then back to the house and to bed, glad I live on a farm.

* * *

Small World

I am sure that many of the readers of Kernels, Screenings and Chaff will get the kick I did out of the following quotations from a letter written me on November 8 by Mr. C. A. Patterson of Williamsburg, Pennsylvania. I quote:

"I have been reading the *Agriculturist* for a number of years. When I received the last issue today and opened it up to your page and looked at the picture of the Kokernot ranch at Alpine, Texas, I thought that the United States is still not so large, as it showed me a ranch where I worked back in the eighties and knew the father of the young man in the picture.

"I can also vouch for the story about the mountains in the distance as I very near did the same thing when I first went to Marfa. Got up one morning and thought I would walk out to the mountains, which I supposed were a mile or so, but I soon found that they were thirty miles or more away. The atmosphere was so clear they looked only a mile or so."

Necessity being the mother of invention, the dry weather we experienced this summer forced us at SunnYGables to adapt our tractor, with the help of C. W. Terry of Cornell's College of Engineering, into a rig which is available alike for pumping water, irrigation, and fire protection.

Essentially all we did was to suspend a rotary pump from the frame of the tractor and belt the pump to the tractor power pulley. This gives us an outfit which is ECONOMICAL since it uses a power plant we already own, is FLEXIBLE because it can be driven about from place to place by its own power, and which has CAPACITY enough to irrigate an acre of land at a time through the rotary nozzles shown in the photograph below.

To release the tractor for field work it is necessary only to remove four bolts by which the pump is suspended from the tractor frame.

Silver and Gold, sorrel four-year-old geldings, and his gray Percheron mare. Also in a box stall, stands Babe and her three months' old filly. In the horse barn everything seems contented, dry and well bedded, except Babe. Obviously she is hungry, so I get her a forkful of hay and reflect that I must talk with Jake about the fact that a nursing mare needs a lot more feed than geldings, but common sense also warns me that I will have to be careful because

now this is filled with fifty ewes and their lambs. I don't snap the lights on because doing so disturbs the ewes which at this hour have all bedded down. Hank leaves a bulb going over the creep for the lambs and it gives light enough so that I can see whether or not everything is in order. Oftentimes there will be a half dozen lambs in the creep nibbling at the leafy alfalfa and grain which Hank keeps in it for them.

As I watch the lambs grow from

Avoid This Experience

"What can I do? I saw an advertisement for a free photo enlargement for ten cents. I sent a negative and a dime and received a letter saying that if I wanted a gilt frame it would cost me another sixty cents—which I sent. I am sending you the picture which I received so you can see how badly it was done."

Unfortunately, there is little that can be done other than tell the story so that other subscribers will not have the same experience. Our subscriber also sent a couple of pages out of the magazine that carried the ad. These pages were filled with advertising of a type that would not be accepted by *American Agriculturist* or any other publication that guarantees its ads or which even investigates before accepting them. The first suggestion, therefore, is that our readers REFUSE TO PATRONIZE FIRMS advertised in publications that have no regard for the kind of advertising they accept.

I wish we could reproduce the picture so you could judge for yourselves, but it is such a poor job that it could not be reproduced! The writer is an amateur photographer and knows something about pictures. The picture our subscriber sent looks like the first attempt of a six year old child at printing and developing. It is covered with finger prints and dust, and is good only to help fill the wastebasket. The only salvage out of the deal is the frame which could be bought in any variety store for five or ten cents.

We said that little can be done because the company has fulfilled its obligations in sending the picture. The subscriber does not like it but all she can do is to refuse to have any more dealings with this or similar concerns. For the money spent, a local photographer would have made a good enlargement. The whole incident shows a bad misuse of the word "free".

* * *

Slick Business

"I sold some hay to a man who claimed to be representing a large buyer. I looked up the firm and found it financially responsible. When I did not get any pay I wrote the firm and they responded that the man who bought from me was not working for them on a salary but was only buying on his own account. They had paid him for the hay and could not be responsible for payment by him to me."

This is a fairly common situation, and one more difficulty which must be considered by the farmer who sells. It shows the necessity of knowing to

whom you are selling and the importance of demanding cash from strangers before the produce is moved. As it stands now, the bill is a bad debt and can be collected by legal action only if the buyer has assets against which a judgment could be levied.

* * *

Slow Pay

"Sometime ago, I sold some timber, but the buyer has not yet paid me the last \$300. Will you please see if you can collect it for me?"

We are troubled over this letter and the considerable number of similar letters we are receiving. Because of the large amount of money involved, timber buyers seldom pay in advance, but agree to pay for the timber as marketed. Too frequently it appears that the buyer fails to pay the last installment, which has the effect of reducing the sale price. There is always the possibility of legal action to collect the balance but the buyer does not always have the assets upon which the bill can be collected.

The partial answer at least is to investigate the standing of the buyer before you consider the deal. Have a written contract with specified dates of payment and use a little pressure as the job nears completion, particularly to see that the bill is paid or nearly so before the last timber has been taken from the farm. We will try and collect this claim, first by persuasion. If this is unsuccessful, it will be turned over to our collection agency which will investigate the financial standing of the debtor. If the debtor has assets the agency will sue at a minimum cost to the subscriber.

* * *

Linoleum Racket

Last issue we reprinted a letter from a subscriber who refused to deal with a salesman who represented a linoleum company. However, we received another letter from a reader who was not so fortunate. In this case, the car had an Ohio license but the subscriber did not get the number. She thought she was getting enough linoleum to cover two rooms, but when the salesman had gone, there was not even enough for one. This is an old racket and we suggest that if anyone tries to work it on you that you get the license number and notify the State Police immediately.

* * *

Explanation Didn't Explain

"An agent came to my place selling blankets. I bought five for \$24.75 to be paid for at five cents per week on each blanket. I gave the agent \$1.00. This morning a collector came and told me I would have to pay more. I made him take the blankets, but he would not return my dollar. I do not care so much about the dollar, but would like to see some of this cheating stopped."

There is nothing wrong with the house-to-house method of selling, but it is subject to a great many abuses. Therefore the buyer should be constantly on guard. At times agents twist the truth badly with the result that the customer finds an entirely different situation than the one explained verbally.

To our way of thinking the more serious objection to this kind of selling is the heavy cost of collecting. Even on the proposition that the collector explained, he would have to make twenty-four trips to collect. Therefore, it is likely that merchandise of equal quality could be purchased elsewhere for less money.

The company has promised to return the \$1.00 deposit. That is fair and puts the responsibility for the misunderstanding squarely on the agent. Safe way is to read the contract or sales agreement before you close the deal.

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

MANURE WILL GO A LONG WAY TOWARD MAKING MORE FEED

THE DRY SUMMER, just past, created the need to grow more dairy feed crops to offset drouth damage. The care and handling of manure thus becomes an important matter this winter.

Here are the ways to get the most out of manure:

1. Spread it over more land this year.
2. Apply it to the crops which will give the best returns.

Manure is a good fertilizer. There is five times as much nitrogen and potash in the manure produced in the New York Milkshed each winter as is purchased in the same area in commercial fertilizer. But manure is deficient in phosphorus. So is most land where it is applied.

Superphosphate Increases Value of Manure

When you sprinkle Gran-Phosphate on stable walks and in gutters, you are not only promoting stable sanitation and providing a gritty, non-skid footing for men and animals, but you are also adding the phosphorus that manure lacks and conserving valuable nitrogen.

You can spread manure treated this way on twice as many acres and get double the crop-producing value out of each load.

As little as one pound of Gran-Phosphate per cow per day will take care of stable sanitation and will greatly increase the value of the manure. Up to 2½ pounds may be needed when the manure is going on fields that have not received any superphosphate earlier in the rotation.

Where Manure May Best Be Used

Old meadows where the legumes have run out usually lack nitrogen, and therefore give the biggest in-

crease in yield from an application of manure. It is a good plan this year to apply superphosphated manure, as far as it will go, to old meadows, especially in drouth areas.

To protect future hay crops, it is especially important to bring new seedings through the winter with as little loss as possible. A light mulch of manure will help protect the young plants from the injury always caused by sudden freezes or thaws.

Corn almost always gets manure and usually needs it. If the last year of hay has been treated with superphosphated manure, however, much of the plant food will carry over. In this case the manure might better

be used where it is needed more.

Manure fortified with superphosphate greatly increases the growth of pasture grasses and legumes, and is helpful in bringing back pastures damaged by drouth. If you expect to have more manure than is needed for the crop rotation, top-dress a pasture field this fall.

Where manure cannot be applied to either pastures or meadows, 100 pounds of Uramon (at a cost of \$3.50 per acre) or some other nitrogenous fertilizer applied early in the spring, will provide the nitrogen to give the grasses a quick start and where rainfall is normal will practically double the yield.

SAND BAGS AND FEED BAGS

Last month Great Britain bought 500 million burlap bags, and the price of burlap jumped again. Burlap has been going up ever since the summer of 1938, when the nations of Europe first began to pile sandbags around their public buildings and monuments to protect them from the shells and bombs that were expected momentarily.

When the bombs actually did begin to fall last September, the price of burlap shot up faster than ever, because burlap is produced in India, and shipments must either come through the war zone or travel all the way across the Pacific.

A lot of farmers are now helping to pay for Europe's war in the form of greatly increased bag costs, but G.L.F. patrons don't have to because several months before burlap costs started to go up, G.L.F. put into effect a cooperative bag program. Farmers who make use of this program and take good care of their bags can get 11 cents for every G.L.F. branded ten-ounce burlap bag returned in first class condition to the receiving points in Buffalo, Albany, and Worcester, Massachusetts. Service Agencies cannot pay quite as much because they have to sort and ship the bags.

Some mash is now being shipped in cotton sacks. These may be returned at the same price as the burlaps. Take them to your Service Agency or get shipping tags and send direct to the authorized receivers, Carl Burwick & Co.

MORE FACTS ABOUT NEW LOW COST MASH

The new G.L.F. poultry feed formula, Special Laying Mash—announced in the last issue of this paper—is now available at service agencies at \$4.00 a ton less than Super Laying Mash. This low cost is made possible by the use of dried brewers' yeast, to supply Vitamin B and the three closely related factors which make up the Vitamin G complex.

These vitamins, abundant in yeast and in milk, are essential for good body condition and sustained production of laying hens.

Poultry research workers have long used dried brewers' yeast in their nutrition studies. They know it as a valuable feed ingredient, more than 2½ times richer than dried skim milk in the vitamins of the G group, and containing 45% of high quality protein. Until recently, however, the price of brewer's yeast has been too high in relation to milk products and alfalfa meal to permit its use in G.L.F. mashes.

The general rise in ingredient costs

Special Laying Mash is a complete feed for laying flocks, and costs \$4.00 a ton less than Super Laying Mash. When changing mashes, mix a little new mash with the old, increasing the proportions each day, completing the change in about ten days.

due to war conditions, coupled with the fact that more and more milk products have been going into human consumption at higher prices, have tended to put these products out of the poultryman's reach. Although the supply of brewers' yeast is still too limited for general use, it now stands in a very favorable price relation to other Vitamin B and G sources.

For laying flocks, even when totally confined, the new mash is entirely adequate. Fed with scratch grains, grit, oyster shells and water, it meets all the nutritional needs of layers. Many poultrymen who are now feeding higher priced mashes can make a real saving by changing to Special Laying Mash. A gradual change over a period of ten days or so is recommended.

AMERICAN AGRICULTURIST

FIVE YEARS FOR \$3.00 — THREE YEARS FOR \$2.00 — PUBLISHED EVERY OTHER WEEK

THE SECOND STEP

Cooperative Marketing Was the First—But Now Cooperatives Can Work Together.

By E. R. EASTMAN

MEETING here in celebration of the attainment of a living price for milk for the dairy farmer, and in honor of the men who helped to get that price, I am carried back in memory to my first experience with the dairy cow. Like many dairy experiences since, it was an unhappy one. The cow kicked me into the drop. Mother took me to the house and changed by clothes, I suppose much to her great disgust. I was maybe four or five years old.

But my outstanding impression of the milk business as a youngster, and pretty much ever since, was that although Father and Mother milked a lot of cows, and worked from morning 'till night to take care of them, *there never was much if any money left for the family after the bills were paid.* When we kids had any Christmas, it was in those years when potatoes, our one cash crop, brought a good price, and we had some to sell.

I cite this personal history because it is also the common history of the great majority of American farmers for the last fifty years. *I charge that except in very temporary periods, the farmers of the United States have never been adequately paid for their work nor their investment, and further, that they were able to stay on their land only by mining their farms, by selling the fertility of their soil.*

Gentlemen, we have come to the end of that period. The farmer can no longer solve his problem by moving off his farm to the city or by taking up new lands in the West. *The day of cheap food is forever gone, and the sooner we recognize it the better it will be for all of us.*

Dangers of Debt

Perhaps the worst danger of low prices for farm products is one to which you have given little thought—the danger to our American institutions. When his income is smaller than his outgo and he sinks deeper and deeper into the slavery of debt, *every man, farmer or otherwise, becomes a radical.* Since he can not make a living with things as they are, he is willing to listen to those crackpots who are long on promises, short on performance.

This work of the Metropolitan Cooperative Milk Producers' Bargaining Agency which has assured farmers a living price for milk is essentially worthwhile, not only for the high social standards it produces, but also for the fact that it helps preserve the only system of government under which it could operate and

A Well-Deserved Tribute

On Thursday evening, November 30, at Syracuse, New York, business paid a well deserved tribute to the officers and directors of the Metropolitan Cooperative Milk Producers Bargaining Agency. Its officers and directors were the guests of honor at a dinner sponsored by the Chamber of Commerce and attended by over three hundred persons, including prominent northeastern business men, farm organization leaders, state and federal officials and farmers.

It is an encouraging sign when business men take an interest in the intricate problems involved in the marketing of farm products. They are realizing, as never before, that business prosperity cannot be maintained without equal prosperity on farms.

The principal talk of the evening was given by Editor Ed. On this page we are giving you some of the highspots of his talk.

bring the farmer a higher standard of living,

Let no one tell you that the cooperative movement is insignificant and unimportant! The Federal government is authority for the statement that there were in the marketing season of 1937-38, 10,900 farmers' cooperative associations, with a membership representing 3,400,000 farmers, or about half of all of them. Those farm organizations in 1937-38 did a business of nearly \$2,000,000,000.

Yes, sir, cooperation is here to stay, and will march forward side by side with the older and corporate way of doing business, the volume of each in direct proportion to the amount of service they render to farmers and to all the people.

I would also point out that cooperation is a method by which farmers help themselves instead of depending too much on government to help them. *Government's function, as I see it, in agriculture, is to supplement the efforts of the farmers themselves, never to dominate, never to pile up a vast public debt by direct subsidies, never to make the bad problem of farm marketing worse by such schemes as killing little pigs and plowing under cotton.*

Government has helped and can continue to help by such work as its splendid educational research for facts and new knowledge, and by marketing agreements.

But the mere joining of a cooperative by a farmer is only one step, for it is even more important for the cooperatives themselves to work together than it is for individual dairymen. *That is the reason why I am so enthusiastic over this Metropolitan Cooperative Milk Producers' Bargaining Agency, Inc., and the smaller one in Buffalo, the Niagara Frontier Bargaining Agency, Inc.* Think of it! Representatives of more than 64 organizations have shoved their feet under the same table, composed almost impossible differences, given and taken with 100 per cent spirit of toleration, *with the result that we have the best price for dairymen, whether in this organization or not, that we have had in nine long, bad years since the depression started.*

Editor's Note:—Here, Editor Ed gave a brief history of the work of the Bargaining Agency, the putting into effect of the marketing orders and agreements and the court action which ended when the United States Supreme Court declared the law and the orders constitutional.

As a result of this Metropolitan Agency, splendidly supported and supplemented by the State and Federal marketing agreements, *dairymen received for October \$2.27, which is the highest October price in nine years, and also the highest price for any month since the depression began, except November and December last year when prices were a few cents higher because the present milk marketing agreements were then in force.* Good prices for the winter are also assured under this plan.

Do I need to point out how tremendously important this better price is not only to dairymen but to every business and to every citizen in the entire milk shed?

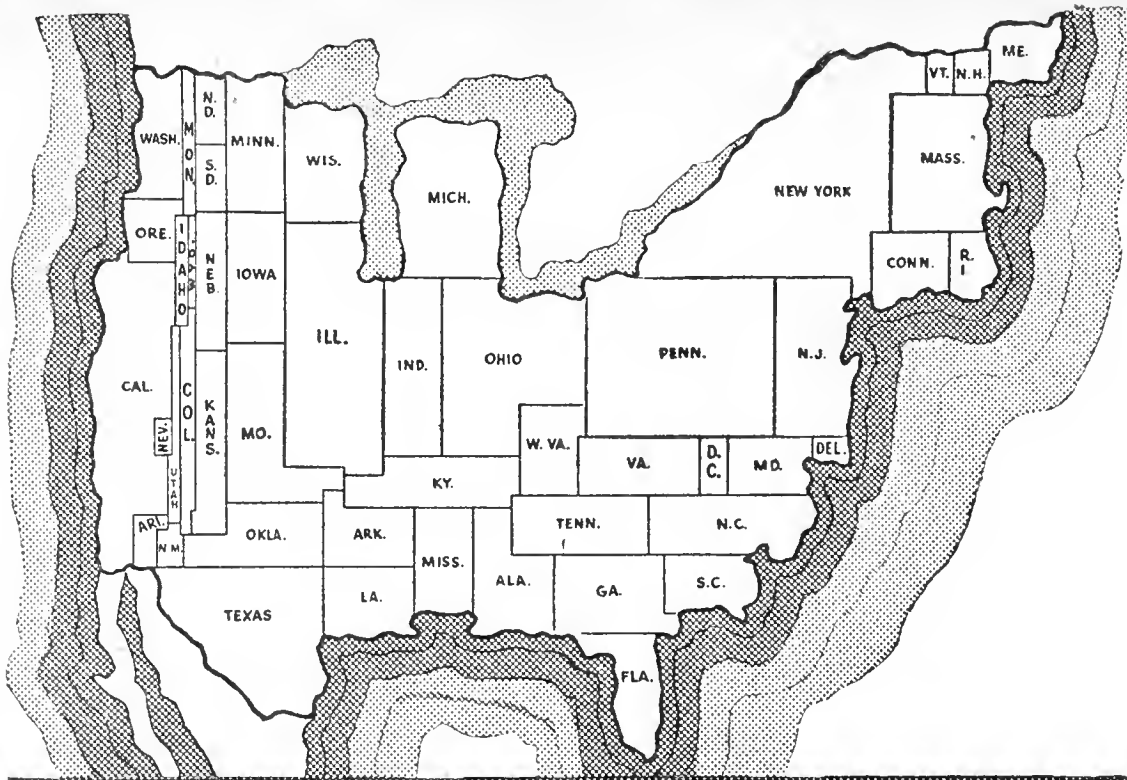

Farmers Must Keep Control

Now may I present some fundamental principles which must be followed if dairymen are to continue to get a living price with its resulting benefits to all the rest of us.

FIRST. *Farmers themselves, through their cooperatives, must keep control of their marketing business.* As I have pointed out, government can supplement and help. It should not control or dominate. Responsibility must rest on the farmer, not on government.

SECOND. Certainly the control should not rest in the hands of the (Turn to Page 24)

The 1939 Potato Season and A Look Ahead to 1940 — See Page 6.

*Did you ever see
a map like this?*

HERE'S a map drawn to a scale of population, with the size of each state shown in proportion to the number of people who live there, not to the number of acres it contains.

Compare that with the ordinary map, and you will see at a glance something we all know but sometimes overlook—

Farming takes elbow room. You can't have the wide open spaces it takes for raising crops and have in the same place a lot of people to consume what the land produces.

So you need transportation—a transportation system big enough to haul to market some 16 million tons of wheat, 11 million tons of corn, more than 7½ million tons of livestock, some 6 million tons of cotton and cottonseed and millions of tons of fresh fruits, vegetables and other crops grown on American farms each year.

And that's a job that only a mass transportation system can do—a transportation system that maintains its own super-highways—a transportation system organized to handle the peak loads of crops which have to be moved to market.

This is the job the railroads do so smoothly you rarely give it a second thought—but without that efficient low-cost service of the railroads the most fertile farm lands remote from the consuming population would have small value.

It is important to you, as a farmer, that the railroads shall be able to keep this service at its present high level—and to keep on improving it as well.

To do that, the railroads need only a fair chance to earn a living—equal treatment with other forms of transportation—so they can do for you the job that no other way of transportation can do.

ASSOCIATION OF
AMERICAN RAILROADS
WASHINGTON, D. C.

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange.

AN IMPORTANT subject agitating the Granges of Massachusetts is the possibility of changing the dates of the annual session of the State Grange from the second week in December to the last week in October, following such a step taken in a number of states during the past five years. Ordinarily the New England winter is "going strong" about December 10th; consequently, there is strong argument in favor of the change to October, when both road conditions and safety in leaving farm homes behind are quite a factor in the decision whether to attend State Grange session or not. No state which has once changed to the warmer month has ever gone back to December.

THE NEWEST Grange hall to be dedicated in Vermont is the property of Bomoseen Grange at Castleton, where the former normal school building has been transformed into a very comfortable, up-to-date Grange meeting place. The building was formally dedicated recently by State Master Henry A. Stoddard, and makes the 76th subordinate Grange in the Green Mountain State to own its hall.

THE DEATH OF CHARLES T. DAVIS of Middletown, Conn., removes one of the best known Grange figures in that state and has caused widespread sorrow. Mr. Davis headed Connecticut Grange work for the years 1916 to 1917, and is remembered as an energetic, hustling leader, whose straightforward, outspoken qualities particularly fitted him for rural leadership. Mr. Davis was prominent in municipal and financial affairs, and was the operator of a fine farm, just outside the city of Middletown.

THE LARGEST subordinate class of initiates reported this fall from any Grange in New England comes from Sharon, Massachusetts, where a class of 57 new members has just been given final degrees. This Grange has been organized but a few months, and in spite of a large charter list and the big class just initiated, many more applicants are clamoring for admission.

RARE DISTINCTION comes to New Hampshire's Juvenile Grange Superintendent, Mrs. Lillian Foss Cooper of Rochester, who has made a record for

the year of having organized more Juvenile Granges than any other one person in the United States. So far in 1939 she has organized 13 new Juveniles, has reorganized one, and has others in process, which are likely to be completed before New Year's Day. Mrs. Cooper has been New Hampshire's leader in Juvenile Grange work for a long time, and is one of the most ardent Patrons in the Granite State.

HARMONY GRANGE at Monroe, Connecticut, holds the record so far for financial profits on an autumn Grange fair. When the results of that undertaking by the Grange were all checked up, a net profit of \$425 was found, greatly to the happiness of Harmony members. Almost immediately they applied most of it toward the mortgage on their hall, and are already beginning to make plans for a "bigger and better" fair next year.

THE LATEST addition to the Grange halls of Rhode Island is Antioch, No. 46, located almost in the suburbs of the city of Providence. An abandoned building was purchased; the members all went to work with a will; and in consequence, the remodeled hall represents minimum of expense, but comprises about all the needed comforts any Grange could desire.

NEW HAMPSHIRE Patrons point with some satisfaction to the possession of an "island" Grange, which is at the extreme southeastern corner of the state, in the town of New Castle. This Grange has been running but a few years, but is very prosperous and recently was honored with a visit by State Master and Mrs. William J. Neal on the night when the official inspection of the Grange for the year was made by Deputy Joseph Parks.

TO STIMULATE hall improvement among its subordinates, Pomona Grange, No. 31, in Pennsylvania, has voted to give generous cash prizes to the three subordinates making the greatest improvement to their halls this year. Pictures of the improved halls both "before and after" must be taken and attractively mounted, to be displayed at the coming session of the State Grange. This Pomona is a large one, embracing the counties of Northumberland, Montour and Union, and the competition among the subordinates will be very sharp.

WASHINGTON COUNTY Pomona, Rhode Island, has an annual custom of making a full day's tour the first week in October, a good-sized party of members assembling and going by chartered busses to some point of interest which all can enjoy. This year a large crowd was driven to Hartford, Connecticut, spent the day in sightseeing and a good time, and returned very happy over the trip.

"See here, Wilbur, you get for the creek to do your practicing. I'm trying to sleep."

What Better Milk Prices Mean to Me

By OUR READERS

THE MILK prices since the Milk Marketing Agreements have been reinstated have been very satisfactory. It seems good to be able to pay some of the back bills which have accumulated while we have been selling milk without the Order.

The Metropolitan Bargaining Agency should be complimented for its good work and every dairyman should be alert to see that we do not allow amendments to the Order that will be detrimental to us.—CARL A. MOTT, Dryden, N. Y.

* * *

Whole-Hearted Support

I TAKE this opportunity to express to you, Mr. Eastman, my appreciation of your support of the Milk Marketing Plan which has brought to the New York milk shed a living price for milk. I also wish to commend the Metropolitan Bargaining Agency in their support of the Marketing Agreements and their bringing together for the common good the many factions which have, until recently, been so widely separated.

I have always been cooperatively minded, and I am convinced that the Bargaining Agency is the only organization that can help the farmers maintain a living price for milk. Therefore, I give 100 per cent support to the Agency, and I believe that all dairy farmers should give it their whole-hearted support.—OSCAR A. BORDEN, Schaghticoke, N. Y.

* * *

Results Count

IN REGARD to the Milk Marketing Order, one has only to look back and compare the prices of his April and May milk checks with his September and October prices to realize why it has been possible to pay up some of the back bills that stacked up last spring and summer.

I can't see why the rural bankers, grocery men, car dealers, machinery dealers and feed dealers should not support the Milk Marketing Agreement and the Metropolitan Bargaining Agency whole-heartedly.

The fact that the Milk Marketing Order works and gets results, and will continue to work if dairy men continue to support the plan, should behoove every fair-minded dairyman and all others interested and affected by the dairyman's income to see to it that the plan is kept in force.—G. S. V. ANDREWS, Lagrangeville, N. Y.

* * *

Future Looks Brighter

I WISH to congratulate you, Editor Ed, for the untiring energy you have shown in helping the farmers in the New York milk shed to obtain a better price for milk. Through your articles and editorials you have done much to bring this about, and at the same time you have kept the farmers posted on the developments in the situation, have helped to maintain their morale (much needed this past summer), and have proven as in years past that you are a friend to the farmer.

I've been a dairyman for years, and am thankful that the future promises a better return with a living wage for me and my fellow workers. Thanks for your efforts!—FRANK W. APPLE-GATE, Auburn, N. Y.

* * *

IT IS NEEDLESS to state how happy I and all other milk producers are, or should be, with the better milk

prices we are receiving at present. I feel that the Bargaining Agency, under the Rogers-Allen Law, is the best set-up milk producers have ever had; and that it could and would function very satisfactorily, with proper producer support, without the Marketing Agreement. However, until practically all producers get into their local Co-ops in support of a marketing plan, I believe the only salvation is with the

Marketing Agreement.

Many thanks to the men who have labored so diligently for the last two and one-half years. Their work is now bearing fruit.—WELDON LYNDE, Gouverneur, N. Y.

* * *

Stand Together

DAIRYMEN here are more optimistic than they have been for a long time. The Milk Marketing Plan is again operating, and its worth is emphatically shown in the increased price we received for milk every month since it was reinstated, especially for October. We are assured of a living price under this plan until May 1, and it will work indefinitely if given the full support of all dairy men.

Remembering what happened last spring when the law was declared unconstitutional and the prices we received

until the Supreme Court reversed the decision, I believe that dairy men will stand together in spite of the efforts of a few dealers, communists and C.I.O. workers to get control of our organizations and wreck the plan.

The Metropolitan Bargaining Agency should have the active support of every dairy organization and every dairyman in the milk shed. I think the Agency leaders have demonstrated that they are sincerely working for our best interests.—J. F. FALLON, Constable, N. Y.

* * *

Reason Enough!

THE SUBSTANTIAL increase in the price paid for milk in the New York milk shed since the Order was reestablished is reason enough for the continued support of the Marketing Agreement. But of even greater im-

Business Men and Farmers Celebrate Better Milk Prices

I WISH it had been possible for every dairyman and every business man to have been present the other night at one of the most remarkable meetings I have ever been privileged to attend. It was a dinner held under the auspices of the Syracuse Chamber of Commerce in honor of the Metropolitan Cooperative Milk Producers' Bargaining Agency and its 64 member cooperatives, with a total of 43,244 producer members.

These producers in the Bargaining Agency ship 71 per cent of the fluid milk which goes into the Metropolitan District.

Present at the meeting were nearly 400 farmers, business and professional men, and government officials. Every one of these men, knowing that the welfare of everyone depends upon the prosperity of farmers, was there to testify by his presence to the good work of the Metropolitan Bargaining Agency, to the splendid cooperation of dairymen, and to the need of a marketing plan like the state and federal marketing agreements.

Among the speakers who praised the Bargaining Agency and the marketing agreements was Commissioner Holton V. Noyes, who stated that the good October prices and the good milk prices to come through the winter were in no way due to the efforts of Mayor LaGuardia, but rather to State and Federal milk agreements supported by the farmers and by the Metropolitan Bargaining Agency.

Other speakers were Dean C. E. Ladd, New York State College of Agriculture; L. J. Kirkland, President of the G.L.F.; William P. Sadler, representing Dr. Gaumnitz, head of the Dairy Division of the United States Department of Agriculture; Raymond Cooper, Master of the New York State Grange; Herbert King, President of the New York State Farm Bureau Federation; E. S. Foster, Secretary of the Conference Board of Farm Organizations; Romeyn Berry, farmer and agricultural writer; Louis J. Taber, Master of the National Grange; Roland B. Marvin, Mayor of Syracuse; and myself.

Jerome D. Barnum, publisher of the Syracuse Post-Standard, did a grand job as toastmaster.

Telegrams testifying to the great job for dairymen done by the Bargaining Agency and the marketing agreements were read by Mr. Barnum from Governor Herbert H. Lehman, Henry A. Wallace, Secretary of the United States Department of Agriculture, H. B. Munger, President of the Production Credit Corporation of Springfield, Arthur Deering, Dean of the Maine College of Agriculture, and many others. You will find some of the telegrams and letters on the opposite page.

It means much for the future of agriculture and of dairying when hundreds of prominent business men meet with farmers in order to understand agricultural problems better, and to give their support to farmers' organizations and their programs. No one could attend this meeting in Syracuse without being enthusiastic, first about the ability of organized farmers to stick together back of a plan that gives them a living price for milk, and, second, about business men's growing understanding of farm problems and support of farmers. Business and agriculture are inseparably tied together, and the one cannot succeed without the other.

THOUGH the people support the Government, the Government SHOULD NOT support the people.—Grover Cleveland.

National Grange's Declaration of Principles

FOR THE ninth time the National Grange, meeting in its annual session, has re-elected Master Louis J. Taber. Completion of the term for which he has just been re-elected will finish 18 years of service to the farm people of the Nation as Master of one of the world's largest and best farm organizations.

Under Master Taber's leadership, the Grange has been a rock of Gibraltar during these bad times. With great wisdom and courage Mr. Taber has kept it marching forward on principles that mean the most for farmers, for agriculture, and for America.

For further news of the National Grange Annual Meeting, see Page 8.

A Bowl of Apples on Every Table

Dear Ed:

I presume you have felt just as badly as I have during recent years when you have observed the distressing situation in which most apple growers find themselves in this state, due to relatively low prices which they have been receiving for their products. This year, of course, the situation is particularly bad, and I have been straining my alleged brain trying to figure out ways and means of helping our growers get a little more money. I had a brainstorm the other day, and would like to try it out on some public minded citizens.

In the first place, I know there are a lot of business men who would like to do something for the apple industry if someone could tell them how to do it easily. In the second place, it has seemed to me that some use had to be developed for apples which would make it compete less with a product which could be consumed as a breakfast beverage, such as orange juice, pineapple juice, etc. My brainstorm is, therefore, along this line:

Why not start a campaign urging business executives, editors, physicians, as well as clerks in offices, to "buy a bowl of apples," and have them on hand constantly in their offices? I have tried it out on my own staff during the past week. I have had a bowl of apples on my desk, have kept it constantly filled, and have offered an apple to every caller that I have had. To date no caller has refused an apple, and several have eaten two. The net result is that almost a bushel of apples have been eaten between meals in my office, practically all by callers or clerks.

I do not expect that such a plan would revolutionize apple consumption, but it seems to me that if it were properly handled, it might materially reduce the alleged surplus.

Is this just a crazy brainstorm or does it have merit? Certainly an apple ought to be just as appetizing, and considerably cheaper, than a cigar or cigarette.—M. P. Rasmussen, Professor of Marketing, Cornell University.

THAT'S a fine suggestion. Let's do it ourselves and get our friends to do it. Even farmers used to eat far more apples than they do now. This is a good time to start. Apples are low in price and high in quality.

For a Good Farm Living

"After reading your editorial 'A Good Farm Living' on the editorial page of the September 2 issue of *American Agriculturist*, I want to tell you that as far back as I can remember Mother has always had a cellarful of canned fruit and vegetables. It is only just recently that people have stopped

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR FARM PRODUCTS.
3. LOWER FARM TAXES.
4. A GOOD LIVING FOR EVERY FARM FAMILY.
5. MORE FUN ON THE FARM.

canning so much because, they say, it is cheaper to buy the different products already canned. Personally I don't see this. As proof that canning is a highlight for any farm family of small income, I am listing in this letter the canned goods I have put up this season. In addition I will probably can at least thirty quarts of tomatoes and two bushels of peaches:

19 pints Rhubarb
24 pints Strawberries
29½ pints Strawberry Jam
19 pints Sweet Cherries
13 pints White Cherries
35 pints String Beans
12 pints Pickled String Beans
21 pints 7 Quarts Purple Berries
27 pints ½ pint Raspberry Jam
13 quarts 8 pints Raspberries
7 quarts Sour Cherries special for pies
10 pints 3 quarts Long Blackberries
8 pints Long Blackberry Jelly
81 quarts Tomatoes
7 pints Tomato Juice
4 pints Tomato Catsup
All kinds of pickles, 10 pints, 5 quarts"

IF WE ADD to the above splendid assortment of canned goods a barrel or two of cured pork and hams, some sausage, and a cellarful of potatoes, onions, cabbage, carrots, pumpkins and squash, this family and others who do likewise can get through the winter comfortably without too much cash outlay. Besides, even though some of the stuff can be bought cheaper, what a feeling of satisfaction, contentment and happiness there is in having such a fine supply on hand!

Not Dead but Asleep

IF YOU are like I am, you lose interest in the vegetable and flower garden after the first hard frost raises havoc. There is always something sad about seeing the flowers turn black and die when many of them are at their best.

But such is Life. And anyway, there is always the resurrection of another spring to look forward to, and to prepare for. That means that the garden work this fall should not stop till everything has been made shipshape for the winter, the old rubbish cleaned up and burned, and later, all of the perennials protected with a mulch, to await the magic wand of another springtime.

Eastman's Chestnut

I AM SURELY going to get myself shot if I don't stop telling stories on the women folks. But I have a good alibi. I suggested that I would print any good chestnuts that the women sent in on the men. The only one I have received lately from a woman is the following, and if I interpret it rightly, it is not on the men. Maybe you men better not read it to your wives. It goes like this:

"John was very dangerously ill. Maria, his wife, was real worried. Bending low over his bed, Maria said, 'John, will you wait for me on the other shore?'

"Haltingly John gasped, 'I suppose—I'll—have to.—I never went—anywhere yet—but what I—had to—wait fer ye.'"

An *Ideal* Becomes a *Reality*

Milk Producers, Business Men and Farm Leaders Welcome "A Living Price for Milk"

CONGRATULATIONS to the Bargaining Agency on the success of its constructive efforts to improve farmers' price for milk. This substantially higher price for October milk justifies the struggle to amend the State and Federal Order by peaceful and orderly legal procedure. The beneficial results of the careful work are now evidenced.

Ten years of ruinously low depression prices have brought distress and disorganization to agriculture, and nation-wide unemployment to urban workers whose products and services farmers have been unable to buy in normal volume. The organization has made clear one method by which farmers can practice self-help for better prices on a specialized commodity.

—FRANK GANNETT, *Publisher, Gannett Papers.*

Mr. H. M. Day:

Syracuse Chamber of Commerce.

I am certain that the price of \$2.27 for October milk must be very gratifying to the dairymen of the State as it has been to me. I think this very satisfactory price demonstrates the effectiveness of the State and Federal marketing agreements. We can, however, hope for success only if there be continued cooperation of the dairymen themselves in solving their marketing problems, and their continued support of the marketing agreements. As I have so often publicly stated—the efforts of government to help in industry are effective only in the degree that they are fortified by the industry itself.

May I ask you to convey my congratulations

to your guests and to express my hope that the dairy industry will have a most prosperous year.

—HERBERT H. LEHMAN, *Governor, State of New York.*

* * *

Mr. H. M. Day:

I regret having to decline the invitation to attend the dinner in honor of the Board of Directors of the Metropolitan Cooperative Milk Producers' Bargaining Agency. Will you please extend my congratulations to this organization for its cooperation in the development of a program for the more orderly marketing of milk in the New York Milk Market. I feel certain that the program developed in this market has resulted in material improvements in producers' income for milk through the establishment of more uniform and stable price conditions throughout the milk shed.—H. A. WALLACE, *Secretary, U. S. Department of Agriculture.*

* * *

Mr. Albert B. Merrill,

Syracuse Chamber of Commerce.

I wish you would extend my greetings and hearty congratulations to those who have taken part in this work which is a great help to our farm people.—GEORGE D. AIKEN, *Governor, State of Vermont.*

* * *

Mr. H. M. Day:

Please accept our heartiest congratulations and approval of the splendid work accomplished by the Metropolitan Bargaining Agency and of the fine cooperation of farmers of the Metropolitan

New York Marketing Area in their support of the Milk Marketing Agreement and order program in this area.—E. W. GAUMNITZ, *U. S. Department of Agriculture.*

* * *

The credit for the \$2.27 October price for milk belongs to the farmers themselves and to no one else.

This price, highest since 1930, did not result from any conference. It resulted entirely from the cooperative action of the farmers themselves working with the federal and state departments of agriculture in setting up joint Milk Marketing Orders and the subsequent amendments to these orders.—H. V. NOYES, *Commissioner of Agriculture, State of New York.*

* * *

Dear Mr. Merrill:

Your invitation to attend a testimonial dinner to the Directors of the Metropolitan Co-operative Milk Producers Bargaining Agency at Syracuse on November 30th is much appreciated. I am in sympathy with the work which this organization is doing and think it very appropriate that the Syracuse Chamber of Commerce is expressing its approval in this manner.—H. B. MUNGER, *President, Production Credit Corporation.*

* * *

Mr. Charles Baldwin, Secretary,
Metropolitan Bargaining Agency.

One of the greatest obstacles to recovery has been diminished farm purchasing power. The \$2.27 price for October milk established under the Federal-State Market- (Continued on Page 9)

GOING TO TOWN --- Dairy Farmers Know the Right Way Now!

Sterling

**SUGAR CURING
MEAT SALT**

YOU not only save time, you also save money when you cure meat on the farm with Sterling Sugar Curing Meat Salt. It saves time because it cuts out all the old-time trouble of smoking separately. It saves money because you get delicious, tender meats every time—when you simply follow the easy directions. You take no chances with your winter's supply of meat.

The formula for Sterling Meat Salt is a balanced blend that is the result of long study by the Research Department of International Salt Company, Inc. It contains the proper proportions of highest quality meat curing salt, spices, flavory brown sugar, and saltpeter—all properly blended with liquid smoke distilled from selected hard wood. The salt preserves, the spices, sugar and distilled smoke add flavor, and saltpeter assures appetizing color. Ask for Sterling Meat Salt by name—and buy it in 2 lb. 2 oz. cans, or the economical 10 lb. can, which will cure up to 100 lbs. of meat.

PREMIUMS INCLUDED—Each 10 lb. can of Sterling Meat Salt has a coupon entitling you to secure at about half the retail cost two valuable farm tools which you will use constantly—a quality butcher knife with carbon steel blade and a bell scraper for removing bristles.

SALT IS WHITE GOLD FOR THE FARMER'S PROFIT

The best live-stock "health insurance" is salt. It not only keeps farm animals well, but adds to their value. Cows produce more milk, horses do more work, pigs grow faster, chickens lay better when they have a proper amount of salt in their rations. You are invited to write to the Research Department of International Salt Company, Inc., about any use of salt on the farm.

FREE BOOK—Farmers say that this book is invaluable. It tells in simple language, how to butcher, cure and store home-cured pork on the farm. Directions and illustrations were prepared under supervision of the Research Department of International Salt Company, Inc.

STERLING SEASONING SAVES MONEY—It adds delicious flavor to dishes made from left-overs. Use it for meat stews, meat loaves, sandwich fillings, gravies. It makes delicious sausage. Use it also for roasts, poultry dressings, baked beans and sea foods. Available in 3 ounce, 10 ounce and 7½ lb. cans.

IODIZED AND PLAIN STERLING TABLE SALT—For only 5c you get 1 lb., 8 oz. of Sterling Salt in a package with a handy metal pouring spout. Sterling Salt is highest quality salt, free running, steam-sterilized, in a moisture-proofed carton.

INTERNATIONAL SALT CO., Inc.

Dept. AA 1239 Scranton, Pa.

Please send a free sample of Sterling Seasoning for Sausage and a copy of "The Farmer's Meat Book" to:

The 1939 Potato Season and A Look Ahead to 1940

By E. V. HARDENBURG.

THIS is the time of year when potato growers seem most interested in discussing market price prospects. The 1939 potato crop is now practically all harvested. A small part of it is in temporary storage where it is not safe from freezing and must be moved to market soon. Most of the surplus is in winter storage from which it will be marketed at such time and rate as the owner thinks will be to his best advantage. While I realize the danger of predicting market prospects for the other fellow's produce, it may be legitimate to state here a few facts that seem pertinent to this year's market situation and review briefly some of the interesting things that happened in 1939.

Price Ahead of '38

Just a year ago today the farm price of potatoes in Western New York averaged about 40 cents a bushel. We had harvested about a normal sized crop. Business conditions were not very good and unemployment pretty high though both were said to be improving. This year, we have a potato crop 11 per cent smaller than last in New York State and about 3 per cent smaller in the United States. Business is better and unemployment is said to be less. Here then, is what seems to be a better outlook for potato prices for the 1939 crop. Today the farm price of potatoes in Western New York averages about 60 cents a bushel, a price level high enough to cover cost of production which the majority of growers failed to get last year. In view of the short crop, it seems reasonable to expect no appreciable slump in the potato market as the season advances. This view is bolstered somewhat by the fact that the crop on both Long Island and in Maine is considerably smaller than that of 1938.

The year 1939 will be remembered by potato growers as one of the driest in the history of weather records. Hardly a single surplus potato producing state escaped the drought of June, July and August. The result was a heavy set and small potatoes at harvest time. We had more scab and less blight than in 1938. Whether due to the drought or not, growers suffered more than usual losses from yellow dwarf and "Z" disease. These diseases constitute a problem for both the grower and buyer of certified seed. The supply of certified seed available for 1940 is smaller than usual. This is especially true of seed of the older varieties such as Rural and Green Mountain. We may expect an increase in 1940 in the acreage of such new varieties as Chippewa, Katahdin, Houma and Sebago because of an increased seed supply and because some of these may be somewhat resistant to yellow dwarf and "Z" disease.

The New Varieties

Almost every year new varieties are being introduced by either the United States Department of Agriculture or the State Experiment Stations. In 1938, Earline, Sebago and Pontiac were named. Farm Bureau tests indicate that Sebago should be increased as rapidly as seed is available. It is a late variety of very white skin and good culinary quality which is not only blight and scab resistant but has yielded as well as our best strains of the Rural type. Earline is a fine quality early variety but it does not yield as well as necessary to become popular rapidly. Pontiac is a late sort, having red skinned tubers of fine quality. This year, it yielded well but the great question is whether a red skinned po-

tato can be sold extensively in the large markets.

This year another new variety was named at the North Carolina Experiment Station and given considerable publicity. It is a late variety called Sequoia. This is an Indian name having no relation to the big trees famous on the Pacific Coast. Sequoia, a cross between Katahdin and Green Mountain, yielded remarkably well under droughty conditions at Ithaca this year, but the tubers are not very well shaped and the variety appears to be highly susceptible to scab. Growers who may be interested in trying-out every new variety as soon as it is introduced, are advised to ignore this one, at least until it has had further trial.

Bacterial Ring-Rot Disease

In reviewing 1939 as a potato year, mention should be made of a disease new to New York and one against which growers should be on guard. This is bacterial ring-rot. It was reported for the first time last summer and its introduction was traced to seed brought into Steuben County from Maine. It is caused by a bacterial organism and is spread by contact. Fortunately it does not live over in the soil, hence can be eradicated by thorough disinfection of the storage and all contaminated utensils and equipment. Great care to avoid planting seed which may carry the disease is urged to keep the disease from spreading. Bacterial ring-rot, in its severe stage, causes a complete soft slimy decay of the central portion of the tubers. For several years recently, this disease has caused considerable trouble in Canada, in Maine and in Colorado.

Consumer Packaging

Many housewives who shop around for potatoes now know that they can buy potatoes in clean, branded 15-pound paper bags. Ordinarily these have been carefully graded, may have been brushed, and represent better than average quality. Potatoes packed in consumer packages cost more than those handled in bulk but the demand seems to be increasing. At least three farmers' cooperative organizations and several individual dealers and growers marketed potatoes in peck packs in New York last year. As usual, a good many Maine and Idaho potatoes were sold in similar packages in our stores also. In a survey made by Doctor Paul Findlen of the New York State College of Agriculture in cooperation with the State Department of Agriculture and Markets, of 2880 retail store samples examined in various upstate cities last season, nearly 30 per cent were in these consumer packages. **The**

"They're lightning rods, but I still get shocked from that electric fence!"

SAFE CALVING

This Plan Is Made To...

1. Keep Down Calving Troubles
2. Get Extra Milk after Calving

We all know the high cost of troubles which come or are started at calving time—udder troubles...slow cleaning...milk fever...breeding failures. On many farms these difficulties cause so large a loss in milk and good cows that they "steal" most of the profits the whole herd should make.

Fortunately, there's a tried and proved plan to help keep down these troubles. It's the Purina Dry & Freshening Chow Plan of managing and feeding dry cows for 60 days before calving. Dry & Freshening Chow is made to build back condition milked off in the last lactation. It is made to build up strength and resistance—to help cows calve and clean quickly and to throw off udder congestion.

Condition put on by Dry & Freshening Chow also steps up production after freshening. At the Purina farm we put about 100 pounds weight on a cow while dry. This 100 pounds makes from 2,000 to 2,500 pounds *extra milk*, as compared to cows not conditioned before calving.

The Purina Plan is easy to follow. And the cost is *low*. Takes only 5 to 8 bags Dry & Freshening Chow for the average cow. See your Purina dealer. Try Dry & Freshening Chow on your next dry cows. See how well they calve, clean and start off milking.

I DARE YOU!

TO READ some lines selected from Elsie Robinson's pen (with the permission of the King Features Syndicate) that are right up my alley:

"You wish people
Would admire you—
Why don't they?
You want people
To respect you—
Why won't they?
You think of all
The favors you've done,
The compliments you've paid,
The struggles you've made,
To be popular—
Yet here you are,
Neglected, unappreciated—
What's wrong?
You're wrong!

"Why should others
Respect you
If you don't
Respect yourself?
Why should others
Believe in you
If you don't
Believe in yourself?

"Cut out all
The fear and fuss,
The pretense and palaver,
And DARE to be
Your own self,
Your simple, honest Self—
And the whole world
Will envy you,
And admire you,
And be grateful to you!

"But why, you ask,
'Should anyone
Admire or envy me?
I'm not rich or wise,
Famous or talented—
Then why should the world
Be grateful to me
For being myself?'
Here's why—
Because it takes
More courage to be
One's frank
And simple self
Than to do
Anything else on earth!

"When we meet
A man who DARES
To be himself
And reveal himself
Without thought of
Fear or favor,
We envy and admire him,
And are grateful to him,
For, by his courage,
He makes all life
Seem easier—
For the rest of us—
And in his presence
We, too, find the courage
To be simple
And honest—
Our real selves!

"You've wished
You could do
Something great,
Something wonderful,
That would win admiration.
Here's your chance!
DARE to be yourself!
Your plain, friendly,
Unaffected self,
And all the world
Will rise
And call you blessed!"

NATIONAL GRANGE Maps Program at Annual Meeting at Peoria

By L. B. SKEFFINGTON

DECLARING that any farm program must consider both the immediate needs of agriculture and long-time steps for permanent stability, the National Grange in convention at Peoria approved of compensatory payments while farm prices are below parity.

At the same time it "confidently looked forward to the time when federal assistance will not be necessary." It classed the present needs of agriculture as arising from an emergency situation, low prices being received for farm products, and the fact that over recent years farmers' incomes have averaged 22 per cent below parity.

With adoption of the report of its agricultural committee, the Grange declared the permanent program should include:

- 1—Safeguarding and expanding of the American market for the American farmer, but no more land should be placed in production through reclamation until need arises.
- 2—Sound land-use policy from a conservation standpoint rather than for the purpose of limiting production.
- 3—Retention of features of the present emergency legislation which experience indicates may prove useful in future temporary difficulties.
- 4—Development of cooperative marketing.

Emergency Program

The Grange declared that the temporary emergency program should include:

- 1—Compensatory payments on domestically consumed portion of our export crops to provide parity prices thereon.
- 2—Production quotas to receive compensatory payments shall be determined on a basis of past history, land use, family needs, labor and equipment on each farm, and shall be posted publicly.
- 3—Administration by farmers.
- 4—Continued use of a portion of tariff revenues to dissipate surpluses at home and abroad.

In various committee reports and resolutions adopted, the delegates emphasized their belief that one of the essential necessary steps toward lifting farm purchasing power was to speed business recovery.

"We concede the right of business and industry to promote and sustain a program in the interest of property rights, with fair and equitable return on investments," it declared; "we recognize the importance of labor and its inherent right to protect its interests through lawful organization and negotiation, but we call the attention of both groups to the imperative need for restoring the purchasing power of agriculture if either are to enjoy a period of sustained prosperity. To this end we invite representatives of these two important groups to join with representatives of agriculture in a determined effort to develop such legislative and administrative policies as will be beneficial to all."

Acts on Railroad Problem

The Grange urged liberalizing of railroad regulation and favored consolidation of lines, so far as the public interest may be served. It reiterated its stake in motor and water transportation and said uniform regulation of all types of carriers would be illogical, tending to destroy the benefits of competition and the economies developed by any type of carrier.

Representation of agriculture in the industrial mobilization plan was urged. The convention declared that details of this plan, "which in time of war or imminence of war contemplates complete regimentation," should be

discussed in Congress and farmers should be acquainted with what would be expected of them under the plan.

Demand for a managed currency was reiterated and Congress was urged to assume its constitutional duty of regulating money.

L. J. Taber Re-elected Master

Re-election of Louis J. Taber was interpreted as complete indorsement of the vigorous leadership which he has given to the Grange during the past 16 years. Two years ago at Harrisburg, Taber recommended to the delegates that it was a good time to choose his successor. Again at Peoria he made the recommendation "with renewed emphasis." In the National Grange there are no nominations for office and, therefore, no nominating speeches. Election is by secret ballot.

When the ballots were counted and it was seen that Taber was continued in his leadership by a practically unanimous vote his only comment was that he "would accept the challenge and devote all of his energy to the realization of Grange ideals."

Eyes on Diamond Jubilee in 1941

For several years the Grange has been looking forward to observing its Diamond Jubilee in 1941. Many of the delegates expressed the hope that a feature of this observance would be a great membership drive that would carry the organization forward to new goals.

Plans for the Jubilee are in the making. In the meantime it appears likely that the 1940 convention will be held in New York State. Raymond Cooper, state master, extended an invitation on behalf of the state executive committee. This is subject to ratification at the meeting of the State Grange in Syracuse. The next move was left with the executive committee of the National Grange, with full power to act.

Fred J. Freestone, former master of the State Grange, is chairman of the national executive committee.

One result of the Grange meeting in Illinois was to arouse wide interest in its policies and program throughout the Corn Belt states.

Farm Credit and American Markets Get Attention

Two of the matters which brought emphatic action from the convention were farm credit and the need for preserving the American market for the American farmer. It will be recalled that recently as one of the moves in government reorganization the President transferred the Farm Credit Administration from an independent agency to the Department of Agriculture. At the time this move was protested vigorously and Secretary Wallace issued a statement that the FCA would continue to function largely as an independent agency.

However, Grange delegates apparently saw danger in having farm credit part and parcel of a department which administers crop control, conservation and other programs. There was some feeling that the time might come when the ill effects of having farm credit linked with the same department regulating these programs might prove injurious to agriculture. The Grange therefore recommended that farm credit be taken from the department and set up an independent bipartisan board, with members serving for staggered terms.

The convention also emphasized its
(Continued on Page 25)

A great step forward—
TOGETHER

- Just yesterday the milk industry was progressing slowly toward the goal of higher milk consumption.
- Now, today, a new method of distribution changes the picture for producers and consumers through the new two-quart single-service container.
- The two-quart container is far more than a new container. It is a new method of distribution. Preliminary tests show increased sales by lowering the cost of milk to consumers on home delivery.
- **THE CONSUMER** gets two quarts at a saving of three cents over the old system.
- **THE PRODUCER** benefits through greater sales in higher priced Class I, or fluid sales.

- **THE DEALER** looks for greater volume of sales.
- This new method is just beginning, but it will be extended to Sheffield's entire market just as fast as machinery and containers are available.
- This new type of distribution offers the best hope for the solution of one of the milk industry's greatest needs—the increased use of the product.

NEW YORK CITY

Potato Market Steady

Recently expressed by a man who makes a study of potato markets is the thought that with the potato harvest completed, prices have reached a relatively stable level and should not change drastically for some months. The thing to watch, for a man who plans to store until late in the season, is developments in the southern crop. Frosts or dry weather may hold back early crops in certain southern states, resulting in temporary increase in demand for old potatoes. Danger is possible conclusion that such prices will continue. The time to sell is when the price is good.

Opinion has been expressed by some southern growers that ultimately potatoes consumed after first of year or earlier will all be grown in South. That is future possibility for growers to study.

Carlot shipments of potatoes up to November 18 were running neck-and-neck with a year ago. This year's figures are 42,471 cars, compared with 42,769 last year. This year Idaho and Maine have been shipping faster than a year ago; while in Michigan, Minnesota and Wisconsin shipments have been somewhat slower. These figures, of course, take no account of shipments by truck.

In Maine price to growers has been running from \$1.75 to \$2.00 a barrel.

Eggs

For the week ending November 25, the State Department of Agriculture and Markets figures that it required 6.6 dozen eggs to buy 100 lbs. of poultry feed. This is a slight increase over the figure of 6.1 the month previous. For the same month in 1938, figure was 4.6; and for 1937, 5.9.

For the same week, the top wholesale price of white eggs was quoted at 30½c and a year ago 37c.

Some slight note of optimism is reported concerning the future for storage eggs. Total cold storage holdings

the third week in November were estimated at 112,000 cases MORE than on the same date a year ago. Receipts from the Northeast have been heavy, one week being 12 per cent higher than the corresponding week a year ago.

enters the New York market and find that they are very happy with the advanced prices.

In view of all the obstacles that you and your associates have had to contend with in recent months, I feel that you are to be congratulated upon the result. Let the good work go on.—E. H. JONES, *Commissioner of Agriculture in Vermont.*

Charles Baldwin, Syracuse, N. Y.

The October price for milk is very gratifying to me as a dairyman. It illustrates what may be accomplished by united effort of dairymen supported by state and federal agencies in administration of the marketing of milk.—LEIGH KIRKLAND, *President, G.L.F. Exchange.*

Dear Mr. Merrill:

Though it will be impossible for me to accept your invitation, I want to endorse thoroughly this expression of appreciation to those who have done so much to bring about order in the New York milk market. Only by the combined efforts of urban and rural communities, and the staunch support that organizations of business men like your chamber of commerce, has been able to effect this improvement in marketing conditions.

Through the *American Agriculturist* and our good friend, Ed. Eastman, whom I see monthly, I have been kept in touch with the wholehearted support that the business interest of the Great State of New York has given this undertaking. Agriculture needs just such friends as you business men have shown yourself to be in this crisis.—A. L. DEERING, *Dean, Maine State College of Agriculture.*

Mr. Albert B. Merrill,
Syracuse Chamber of Commerce.
As I am interested in farming and

milk production, being the owner of two small farms, and have had long acquaintance with the Executive Secretary of the Bargaining Agency, I am greatly interested in the work of that Agency and its local economic importance. The plans that you have made in respect to this dinner and the speakers selected to furnish information should be highly interesting to farmers as well as business and professional men.—ROLAND L. DAVIS, *Judge, New York Supreme Court.*

Syracuse Chamber of Commerce, Syracuse, N. Y.

I am not able to accept the invitation to attend the testimonial dinner tendered to the executives of the Producers Bargaining Agency. This Agency has performed a very difficult task with high distinction and is well entitled to the amenity accorded it. I discontinued my active association with the milk industry last May, but my interest continues.—BERNE A. PYRKE, *Former Commissioner of Agriculture for New York State.*

What Better Milk Prices Mean to Me

(Continued from Page 3)

portance is the opportunity that this Agreement affords the one hundred thousand dairy farmers to cooperate in building a sound marketing program for the industry.

Essential to the success of this plan is the united support of the many groups of producers through the Bargaining Agency, not only to make effective the operation of the Order, but to perfect and improve the methods by which milk is marketed in the New York milk shed. It is my opinion that this program can be of material benefit to our dairy industry.—AARON PUTNAM, *Bath, N. Y.*

October Milk

George J. Smith

THINGS REALLY HAPPEN WHEN FARMERS WORK *Together*

THIS MONTH the Metropolitan Cooperative Milk Producers Bargaining Agency, Inc., is 2½ years old. That's a short time in the lives of men and of organizations. But it has produced A MIGHTY BIG RESULT. Because farmers working together through the Bargaining Agency have done more for themselves in the past 2½ years than 50 years of quarreling and competition for markets have done before.

For one thing, we united farmers—using the peaceful and legal means of the Bargaining Agency—have won the largest check for October milk that any of us has received at any time during the past 9 years.

For another thing, we have promoted a more widespread feeling of good-will and brotherhood among farmers than any of us living today can remember.

But that's only a part of the benefits we have won through the Bargaining Agency. Today—instead of the former disorganized groups trying to raid each other's markets—we have 43,244 producers united in 64 legally constituted cooperatives, each one of them working to produce a larger and better market for us all. Today we have 71% of the producers who ship to the New York market working for the good of all producers who supply that market.

Today the producer groups who comprise the Bargaining Agency have gone a long way toward the goal of controlling their own industry. We need the help of every dairy farmer to really accomplish that end. We say to every farmer—join a cooperative now and take an active part in it. You have nothing to lose and everything to gain: First, because the Bargaining Agency has definitely proved that it is working for the good of all farmers. And second, because the Bargaining Agency has proved that 2½ years of wholehearted co-operation has done more good for farmers than a half century of quarreling, criticism and competition.

NORTHEASTERN Slants ON THE National NEWS

■ "Reds" Seek Producer Control

TWO SPEAKERS on program of National Cooperative Milk Producers' Federation's annual meeting, held in Chicago last month, warned that communist and other radical forces are trying to dominate milk producer organizations throughout the country.

"Communist influence, through CIO activity, is active from East to West," said Fred Sexauer, president of Dairy-men's League Cooperative Association, who spoke at convention's opening session. He declared that while the Communists may use different methods of approach, their aim is always the same, whether they are working through the CIO or through organizations supposed to represent farmers.

B. F. Beach, of Detroit, secretary-manager of Michigan Milk Producers' Association, said that Michigan farmers have lost hundreds of thousands of dollars as a result of radicals' activities.

■ Frozen Foods Bring Year-Round Farming Market

AFTER a ten months study of frozen goods industry, which took him on a 21,000 mile coast-to-coast tour of farm producing and distributing centers, Harry Carlton, University of Tennessee marketing expert, says: "The frozen foods industry is knocking the calendar out of the farming game, and the northern states are about to become the winter garden states." He added that the southern farmer—who formerly had a corner on the winter market—is going to be left holding bag, with the northern grower getting the profits, unless products of exceptional quality and fine flavor are developed in the south to compete with the farm produce of the north, where the freezing industry has reached its highest development.

"Individual growers," said Mr. Carlton, "do not realize yet that the market is shifting. For instance, I found in Florida that hotels and other consumers, during the height of the strawberry season there, were using fresh frozen strawberries from the north, asparagus from New Jersey, and peas from Maine, where once they came from California."

Reason for changes, he declared, is that frozen foods give the public fresh produce the year round with no fluctuation in price; also, they get rid of kitchen drudgery by providing the housewife with vegetables, meat and fish that are all ready for cooking, and with fresh fruits which only need to be popped into sauce dishes and put on the table.

■ Farm Credit News

HOLDING ANNUAL MEETINGS

In nearly every county of the Northeast, stockholders of national farm loan associations (each a farmer's mortgage cooperative) are holding annual meetings to discuss farm credit. There are 138 of these associations, with 30,000 members in New England, New York and New Jersey. All are under the land bank system, and together they make one of the big cooperative farm

groups and provide some \$75,000,000 of mortgage credit.

Volume of new long-time amortized loans continues at an even flow, but slightly under year ago. Interest rate, at 4 per cent on most loans, is still at lowest point in bank's history. Demand for farms is considerably above a year ago, with sales of acquired property 46 per cent ahead. Buyers include not only local farmers but also business and professional men from cities.

Reporting to association stockholders, President E. H. Thomson of Springfield land bank said farm conditions are apparently on up-grade and are more favorable than a year ago. Pickup in industrial activity, he said, should increase the purchasing power of city people and make them better customers for what the farmer has to sell.

NEW REPAYMENT PLAN

Required payments on some 15,000 mortgage loans owed by Northeast farmers may be cut in half by plan announced last week by Springfield land bank. Blanks were mailed to farmers who owed ten-year Commissioner loans so that they may apply for revision to twenty-year repayment plan.

Commissioner loans, mostly on second mortgages, have been available since summer of 1933, and have been made through the land bank system. Shift in repayment plan will make it easier for farmers to meet their obligations.

PLAY SAFE

Here is good advice from Springfield land bank officials. If prices do rise because of Europe's war, they say, it is far safer for a farmer to pay off his existing debts than to go further into debt, as many farmers did during last boom in hope of making money faster. War in Europe today by no means assures us of another boom in United States like the one brought by World War No. 1, they add, and point out that in any case periods when prices and incomes rise rapidly *usually do not last long enough for farmers to pay their new debts down to a point where they can carry them through periods of low prices which follow the upswing.*

■ Farm Notes

"Victims of Vicious Circle"

Plight of rural school teachers was discussed at recent meeting of New York State Teachers' Association in Albany. To the assembled delegates there, one young rural schoolmaster, Ray H. Conrad of Lewiston, described rural teachers as "victims of a vicious circle—working hard, long and fast, their positions only good for a year, and constantly threatened by local politics." Delegates responded by passing a resolution calling for rural tenure rights, with administration jointly by district superintendents and principals.

Winter Barley Being Tested

Cornell University experts are testing seed from many parts of the world to determine if winter barley can be grown successfully in New York State. They are looking for a variety that will be able to stand an old-fashioned winter and still be a good yielder. Among those on trial are some from Europe and Asia, and from different

parts of United States.

Results to date show that a number of the varieties in the trials are apparently far superior to any of those that New York farmers have been growing, but even the best of them do not stand soil-heaving as well as the adapted winter wheats, according to W. D. Swope of the Cornell plant breeding department. Alternate freezing and thawing during April caused plants in Seneca County (where one test plot is located) to heave so badly that the plot was ruined.

In Livingston county, average survival of plants of all varieties was 73 per cent. Poland, the variety most generally grown in New York State, had 64 per cent of its plants living when the count was made. Yields varied from 11.8 bushels to 68.8 bushels to the acre, with an average of 35.9 bushels to the acre.

Chinese seed made best showing of all, says Dr. Swope. One Chinese variety came through the winter with an almost perfect stand and produced 68.8 bushels to the acre, which was nearly 7 bushels more than its nearest competitor.

No Rest For the Good

No matter how much he wants to retire, the National Grange won't let Louis J. Taber step down from his job of National Master. At this year's annual meeting, delegates insisted on re-electing him again for his ninth two-year term, which will carry Master Taber through the diamond jubilee year of the grange in 1941.

Delegates also re-elected David H. Agans, of Three Bridges, N. J., as overseer. David Agans, New Jersey State Grange Master for the last twenty years, is another good scout who can't escape getting re-elected to any office he holds.

Male and Female

In the United States there are 500 persons who have an unique occupation. Their job is to take newborn chicks and separate the boys from the girls. Three hundred out of the 500 "sexers", as these experts are called, are Japanese. They charge an average price of a penny a chick to separate pullets from cockerels the day after hatching. There is a growing demand for their services.

Biggest Lumber Deal

Six hundred million board feet of New England lumber, toppled in last year's hurricane, has been sold to a cooperative of lumber wholesalers for \$14,400,000, according to announcement made by Northeastern Timber Salvage Administration. This is believed to be biggest lumber transaction in nation's history. Timber owners will receive \$24 a thousand feet.

■ War News

Germany's New Weapon

PASSAGE of Neutrality Act by Congress last month got American ships out of European danger zone just in time. Since then, many a good ship has gone down, with heavy toll of lives lost. Mysterious floating mines in North Sea, believed to have been turned loose by Germany contrary to international law, have wrecked not only British ships but many innocent bystanders—ships belonging to neutral countries.

Last September, Hitler hinted at deadly "new weapon". This is now being taken to mean the mines which are doing the damage. Just what kind they are, and how they are laid, are questions France and Britain would like to have answered. One belief is that they are "magnetic" mines, which perhaps explode when steel hull of a ship passes nearby, and that they are laid by planes. American experts, however, scoff at this and say they are laid by submarines.

Though Germans deny using floating

mines, they are taking credit for damage done. To get even, Britain has just aimed another heavy blow at Germany's economic life. Her blockade of Germany has been extended from seizing contraband goods going to Germany to capturing as well all goods coming from Germany. In other words, she is trying to cut off both German imports and exports. Neutral countries are protesting against such a policy, which they say will smother trade and hurt them as much or more than Germany. (Since September, Germany's export trade has been largely carried on through use of ships belonging to neutral nations.)

Russia Attacks Finland
After weeks of trying to browbeat tiny Finland into handing over some of her territory and naval bases, Russia took "armed action" against her little neighbor last week. Before doing so, Soviet broadcasts were heard in Finland, appealing to the people there to rebel and overthrow their government. At same time, Russia loudly accused Finland of trying to start a war with her—which would be about like Panama taking on the United States. United States, through Secretary of State Hull, made a last-minute attempt to stave off war between Russia and Finland by offering to mediate the quarrel.

Railroad Picture Brightens

IN SPITE of losing better than 91½ million dollars during first six months of this year, railroads expect to wind up 1939 with a profit of between 65 and 80 million dollars. Good business since July has been helping the roads to get out of the red. Last year, Class 1 railroads lost money to the tune of nearly 123½ millions.
Here's how Class 1 railroads' cash register looked at end of various years since 1932:

	Profit	Loss
1932		\$139,208,821
1933		5,862,836
1934		16,887,078
1935	\$ 7,539,127	
1936	164,630,041	
1937	98,057,740	
1938		123,471,074

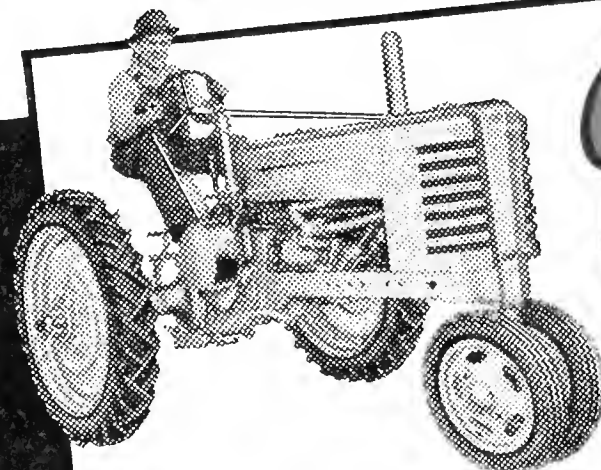

Good Books to Read

LOOK AWAY, *George N. Shuster*. Edith Treloar, left an orphan at 12, though a fairly wealthy one, is brought up by her aunt and uncle in Wisconsin and educated at a convent school. Just before the Civil War she falls in love with and marries a dashing young Democrat from Kentucky who came north to practice law. Together they are caught in a drama of war. The other frontier characters depicted—the doctor and his New England wife; Sawyer, the kindly, shrewd lawyer; Missouri, the eccentric maid who joins the Union forces; great historical figures like Lincoln and Douglas and Grant—all contribute to a fascinating picture of the makers of history and romance.—*The Macmillan Company, New York. \$2.50.*

Good Movies to See

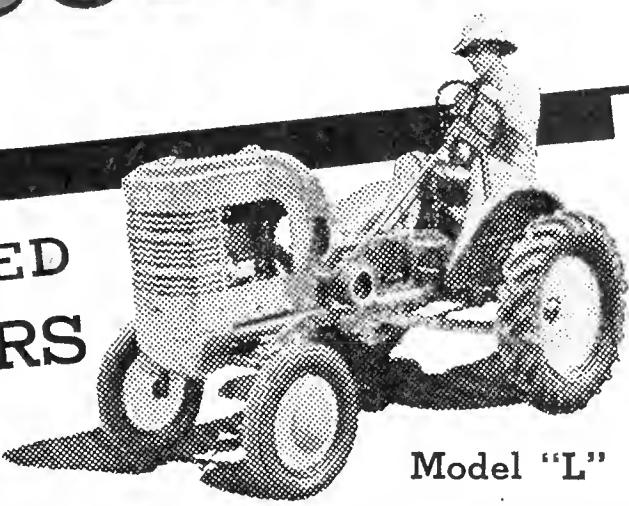

NINOTCHKA. For 13 years Greta Garbo has been the symbol of tragedy on the screen. In this comedy of Russian Bolshevism a new Garbo emerges, revealing deft comedy, shy humor and warm gaiety. One of the most enjoyable movies in recent times.
NURSE EDITH CAVELL. Although many will already have seen the former production of this picture, they will want to see again this deeply moving story of a tragic incident in the Great War which stirred the entire civilized world. Anna Neagle plays a fine part, and the tension is broken by occasional gleams of humor. It is NOT advised for children.

NOW, ON THE SMALL FARM, TOO!

Model "H"

John Deere
TWO-CYLINDER
ECONOMY

Model "L"

2 SMALLER, LOWER-PRICED JOHN DEERE TRACTORS
Specially Designed FOR THE SMALL FARM

Smaller in size and lower in price, these two John Deere Tractors completely replace animal power and make tractor farming both practical and profitable on the small farm—put small acreage farming on a new basis of satisfaction and profit. Ideal as supplementary tractor power on the large farm.

Embodying the outstanding features of larger John Deere Two-Cylinder Tractors... designed and built to deliver the same economical, dependable performance, your work moves along faster. It is done better, in less time, with less effort. Crops are planted, cultivated, harvested on time. Yields are greater. Costs are lower—profits higher.

You owe it to yourself and your family to investigate fully the advantages of horseless farming with a Model "H" or "L" Tractor. Investigate, too, the complete line of integral equipment to go with them. No matter what

the size of your farm—there's a John Deere Tractor to fit it, eighteen models in all, to cut your costs, increase your profits.

The John Deere Model "H"—A smaller, lower-priced, one-two-plow tractor of the tricycle type that plants and cultivates two rows. Embodies all the features of larger John Deere General Purpose Tractors. Unexcelled in vision, ease of handling, economical operation. Handles every job on the small farm and many jobs on the large farm. Has the daily output of four to six horses or mules.

The John Deere Model "L"—A four-wheel type, one-plow, one-row general purpose tractor. Ideal for the small farm, for truck gardening, working in greenhouses, in nurseries, and for the lighter jobs on the large farm. Remarkably economical. Adjustable tread. Has the work capacity of two to three horses or mules.

HARRY L. FAIRBAIRN, Prop.
H. L. FAIRBAIRN, Jr., Mgr.

By L. B. SKEFFINGTON

From SKEFF'S NOTEBOOK

HERBERT P. KING was continued as president of the New York State Farm Bureau Federation, along with other officers, at the 24th annual meeting in Syracuse.

A long list of resolutions was adopted, expressing views of delegates on matters of importance to agriculture during the year. There was no division in the voting, except on a resolution concerning the St. Lawrence Seaway. The resolutions committee, being unable to agree, had left this to the delegate body, which voted its opposition to the project.

The Legislature was asked to provide for flexibility in budgets of the state college and experiment station, and to use a larger proportion of gasoline taxes for highways.

Employment of livestock specialists and improvement in marketing methods were favored.

Tax relief for real estate was asked.

The Bailey bill in Congress, which would appropriate \$5,000,000 for marketing extension, was opposed unless it is amended to make use of the established extension services.

Study of marketing agreements for canning crops was proposed.

Guaranteed analysis on fertilizer packages was urged.

Discriminatory taxation against any

form of distribution was opposed.

Daylight saving was opposed.

State purchase of poor land for reforestation was urged, and private forestry was favored against leasing of land to the federal government.

The American Farm Bureau Federation was invited to hold its 1940 meeting in New York.

Edward R. Eastman, editor of *American Agriculturist*, told the convention a challenge before farm organization was to reach the great majority of farmers who are not organized and who need help most. He thought the farm groups had erred by sticking too much to routine. The next challenge, he said, was to maintain the family-sized farm with prosperous farm families unless America was to develop a peasant class.

Federation policies in the year ahead are reflected largely in the reports of the commodity committees. These committees—dairy, fruit, poultry and vegetable—were elected by regional committees, which in turn were named by the commodity committees in the various counties. The delegates after hearing these committee reports adopted them unanimously, the chair stating that "they had the same force as resolutions and they are part of our program, if adopted."

Portable new
ELECTRO - PAIL
gives you boiling
water when and
where you need it!

IN THE DAIRY BARN

IN THE FARM KITCHEN

BOY, oh boy! Here's the swellest new invention you ever saw!

It's a 14-qt. heavy-duty galvanized pail with a built-in electric heater! Carry it about as easily as you would an ordinary bucket. Plug in the 10-ft. rubber insulated cord, and you've got an automatic water heater that does a dozen farm chores! If water boils low in pail, the electric plug pops out automatically!

The Electro-Pail's not only dandy for washing cans and pails—it's just the thing for sanitizing milking equipment in 180° water, heating mash for live-stock, bathing injured animals. Farm wives will want it for washing clothes and dishes; canning and cooking; or heating water for the baby's bath.

Call our Rural Service Department today for full information on the Electro-Pail—the only low-cost portable water heater on the market!

NIAGARA, LOCKPORT & ONTARIO POWER CO. NIAGARA HUDSON

The dairy committee report was made by H. L. Creal of Homer. In part, it recommended that private testing for Bang's control be continued; that the approved herd plan be continued with addition of fresh blood-sampling, free laboratory testing, with more state and county funds for these purposes; that an appropriation of at least \$300,000 be continued for indemnities; that calf vaccination be recognized as a supplement. For bovine tuberculosis eradication an additional appropriation of \$150,000 was urged for herd testing. The committee feels that for at least two years every cow should be given an annual TB test to protect the investment of cleaning up the disease in the state.

Hall Clothier of Silver Creek reported for the fruit committee which urged setting up of a joint committee of the federation and the Horticultural Society to study problems of the apple industry, as was done a dozen years ago; that efforts be made to obtain soil conservation payments of \$15 to \$20 an acre for removal of old orchards and vineyards; that research be continued to find a non-residue spray; that the state college continue its studies of apple marketing; that the present grading laws be enforced rigidly and until this is done there be no change in the laws; that the State Department of Agriculture be asked to extend its work with the trade to prevent misbranding and overfacing of apples; that a study be made to determine advisability of requiring out-of-state fruit be subject to the same grading and marking requirements as state fruit; that the Apple Institute be commended for its good work.

The vegetable committee, of which J. D. Amele of Williamson, is chair-

man, commended special crop reports on cabbage and urged that crop reports be continued and made more useful; it supported the FSCC purchase program; urged educational work on marketing agreements for vegetables and favored a law that would give vegetable growers rights given to dairymen under the Rogers-Allen law; it commended work of the Northeastern Vegetable Council; favored research work to develop disease-resistant types of vegetables and \$30,000 for greenhouses and personnel for this work at Cornell; asked corn borer-control studies at Geneva and Cornell, that research on melons be continued and the seed cooperative certify bean seed.

The report for the poultry committee was made by John Rice. It urged that laying tests accept only birds hatched on the farm of entrant; that the federation approve the national pullorum testing plan; that study be made of breed improvement; that the state pay bounties on foxes or reimburse poultrymen for poultry losses due to foxes; that data be compiled on different types of marketing; that licensing of haulers of poultry other than producers be considered to reduce thefts; that turkey research be undertaken at the college.

Arthur H. Packard, president of the Vermont Farm Bureau Federation, said the first problem before the country was to give everyone who wants to work an opportunity to do so, to help create national wealth and raise the standard of living. The second problem, he said, was the price level. He said it needed no scientist to discover that farmers could not prosper at widely fluctuating price levels, and that if this was permitted to continue it might mean the ruin of America.

A.A. Bread Baking Contest News

WHEN New York State Grange's big annual meeting gets under way next week at Syracuse, one of the events that will draw the most attention will be the State Bread Baking Contest. Loaves of bread entered by the 53 county winners will be judged on Tuesday, December 12, by the following committee of judges:

Mrs. Elliott Baker, R. 4, Syracuse, N. Y., who will represent the Grange.

Miss Erica Christianson, Supervisor of Home Economics Education, Syracuse.

Miss Frances Scudder, Syracuse City Home Demonstration Agent.

All county winners have been sent instructions for the state contest, and have been asked to have their bread at the Hotel Syracuse by Monday night, or not later than 10 a. m. Tuesday, the 12th. Judges will start their work at that hour.

Since our last issue, we have the names of three more county champions:

Pomona Winners

COUNTY	GRANGE	WINNER
Chemung	Big Flats	Mrs. Herbert Hammond
Niagara	Pendleton	Mrs. William D. Miller
Schenectady	Duane	Mrs. Roscoe C. Wilber

Watch for the story of the state contest in an early issue. Names of winners will be announced, as well as prizes they will receive from *American Agriculturist* and the following commercial companies: Cooperative G.L.F. Exchange, International Salt Co., Kalamazoo Stove Co., Pillsbury Flour Mills Co., and Russell-Miller Milling Co.

About State Grange Program

In the last issue reference was made to the State Grange program, including statement to the effect that some programs would be in Lincoln High School. The account should have stated that some programs would be in Lincoln Auditorium, which is located in the Central High School, only two blocks from the Syracuse Hotel.

We want to avoid the possibility of confusion because we are informed that there is a Lincoln Junior High School, which is located at a considerable distance but which is not to be used for any Grange sessions.

GRATEFUL, YES . . . *but let's Not forget the lessons of 20 lean years*

IN THIS time of good will between Thanksgiving and New Year's, let us look back for a moment at the way we have come. Look back to some of the things which have been responsible for our blessings—back to some of the battles we have been through in order that we may draw new courage. For the fields and herds that have provided today's abundance were tended and brought to fertility by the work and patience of other years. And next year's harvest is just as surely being prepared today.

Today, as we enjoy our larger milk checks, let us not forget the 20 years of effort that went before. Years of privation, disappointment and bitterness when we were frequently misunderstood, lied about and opposed—chiefly by dealers, but sometimes by farmers themselves. And today when peace reigns—when practically all farmers in this milkshed have come to understand and value the benefits of cooperative effort—we would gladly forget those long and bitter years. We would forget them were it not for the fact that they hold a large and golden nugget of wisdom for us all. Because the misunderstandings and oppositions that happened once can happen again—unless we stop them . . . unless we steel ourselves now, and resolve that those unhappy years **SHALL NEVER return.**

We can make that resolve quite properly today because we are all united . . . and because the large and powerful membership of other farm cooperatives are marching shoulder to shoulder with the Dairymen's League. There has been that unity—that one-for-all and all-for-one spirit—which has finally routed the dealers and the anti-farm gang. It has been that unity which has enlisted the legal and sympathetic cooperation of the State and Federal governments . . . and which defended that cooperation in courts of law. And today it **MUST BE** that unity which will defend our homes against invasion by alien political "isms" dangerous to our lives, our liberty and our rights to live as free and independent American citizens.

So let us be grateful that the years of doubt, disunion and despair are behind us. Let us be grateful that we have been able to outlive the 20 lean years when the permanent living price for milk was just a far-off hope. Let us of the Dairymen's League remember that during all those years we have had a steady market for our milk, and always received our checks on time. But let us resolve that we and our children shall enjoy more than 20 fat years. For we have learned our lesson: "United we stand; divided we fall." And a **LIVING PRICE FOR MILK** is ours to keep if only we will stick together during the fat years as well as we have done during the lean years that have gone before.

**THIS STATEMENT IS PUBLISHED BY THE FARMERS WHO OWN, OPERATE
AND CONTROL THE DAIRYMEN'S LEAGUE**

NEARBY MARKETS for NEARBY POULTRYMEN

A "Fowl" Situation By J. C. HUTTAR

DID YOU ever have the feeling that you ought to know more about a certain thing which you're sure is important, but you don't and you wish you did? Well, I do—plenty. It's embarrassing when this ignorance strikes me on the matter of poultry and egg marketing, because that's one thing I am supposed to keep posted on. It's what I make my living at.

J. C. Huttar

It reminds me of the time last winter when our water pump failed to pump water after one of the coldest nights. I thought the pipes had frozen in the house, but I found they hadn't. However, when the tank pressure got low the pump would run, but I could tell from the sound

that it was not pulling any water. My mother-in-law, who has spent most of her life on a farm, was staying with us, as it was about the time our Jimmy was born. After I had investigated everything I knew of and had used up my small store of knowledge on water systems, she said to me: "John, doesn't your water come from that spring reservoir behind the barn?"

I said it did, but I had just looked at it and the water was up high enough.

"Well," she asked, "wasn't it frozen over?"

"Why, yes," I told her. "It has a solid surface of ice over it."

"Well, John," she said gently, so as not to hurt my feelings, "you know the pump won't draw unless you break the ice."

I went up and broke the ice and we soon had water again and my face was red until Jimmy cut his first tooth.

The thing right now that I feel I should know more about is this by-product of poultry farms—the poultry meat.

As a general thing the chicken keeper has never bothered much about the sale of his broilers and hens. He sort of took it for granted that he couldn't make any money on them. The main thing was to sell the broilers as soon as they were big enough, so that anybody would want them. And sell the cull hens or old hens as quickly as possible after the culling job was done or the pullets were ready to house.

Signs of Thinking

Whether I know anything about it or not, I can see very clearly that folks who keep chickens have not only thought about it but have taken some action.

Take for instance the number of folks who buy only pullet chicks now, so that they don't have to feed those broilers. And, another thing, this swing over to Heavy Breeds is not all a matter of high mortality with Leghorns. Many folks think in terms of getting more money for the hens after they have finished their profitable laying careers.

Once in a while a larger poultryman will tell me that there are two reasons why he does his culling continuously throughout the year. One is so that he doesn't have to feed birds that have quit laying more than a few days after they've stopped. And the other, they tell me, is to get better prices for the fowls.

And that's true, of course. The common way to market the fowls has been and still is, to sell them either after a single, complete culling sometime late in the summer or sell off all the old birds when the pullets are ready to house. Because of this the price of fowls has dropped to its lowest point in the early fall, year after year. So the fellow who spreads this selling out over six or seven months is bound to get a better average price for the cull hens.

But all this is really only sparring with the problem, and not really solving it.

The trouble is with me that right here is where I say, "I don't think I know any more about it than you do."

It Pays to Investigate

There were several times this fall when I saw things that made me sure this whole question of meat poultry in an egg production enterprise is now handled very wastefully and may be improved.

During September and October, when high feed prices and low production sent so many thousands of hens to market I knew of large numbers being sold as low as eight cents a pound. Even now this movement of fowls from farm to market continues heavy and at low prices all over the country.

I learned something else about two months ago, which particularly affects us here in the Northeast.

You will remember, in a recent issue I told about a market trip I made with some poultrymen from Pennsylvania. Well, on that trip we made a visit to a very large retailer of poultry. I'd been there several times before in years past. I noticed this time that, instead of only Western boxed poultry, this outfit was now selling a lot of Northeastern barrel ice-packed chickens and turkeys. I asked the manager whether this local stuff was as well accepted by the buying public. He told us that consumers seemed to prefer it because of its fresher flavor.

When you stop to think about it, chickens that have had the entrails in them for a week or more after killing are bound to absorb some flavor from them. I had noticed it when I compared the flavor of a butcher shop chicken in New York compared to a fresh killed one on the farm.

Work to Be Done

As I see this thing now there are a few questions that have to be cleared up in my mind before I'll make much headway with this problem.

Here are a few that come to my mind right away. I'll bet you've thought about them too:

Do broilers from egg producing flocks always have to show a loss, regardless of when they are hatched?

How about fall hatched chicks?

Is it better to sell a cull hen in a full molt (when she's very light) at a sacrifice price or keep her a few weeks until she has a more salable appearance and more weight?

How much of a discount can one afford to take on brown eggs as compared to white and still have this difference made up by the better prices on Heavy Breed broilers and hens?

Our Agricultural Colleges have not given us as much help on meat poultry problems as on egg production. I respectfully suggest that the poultrymen of the Northeast would appreciate the answers to the above problems. Probably some have been worked on already, but I just haven't come across the report of results.

Your Questions Answered

Better Hens

I have a flock of White Leghorns that are producing above average, but I want to increase that average. What is the best program for me to follow?

You do not say whether you are hatching your own chicks or buying them. If you plan to hatch the eggs from your flock next spring, you can buy as many high-quality males now as your pocketbook can afford. The important thing is to be sure that you are buying some better than you already have and that you are getting your money's worth. Get in touch with several poultrymen who have real breeding programs. Visit them and see just what records they have showing that their males are from high-producing stock. Plan to mark the chicks sired by these males next spring. You should get from them some males for your own breeding pens a year from now and some pullets that may raise your average production a year from this coming winter. In fact, if you buy several males, you might try to get at least one with an outstanding record in order to raise some males to head your own pens next year. Another method is to buy some hatching eggs from an outstanding flock next spring.

If you are buying chicks, it is a question of knowing what to buy. There is always a chance that you will get unusually good chicks without paying a premium for them, but the surest way is again to hunt out a man who is doing pedigreed hatching and pay a few cents more for each chick with the expectation that your pullets next year will have a higher inherent ability to lay than the hens you now have. If you want to buy chicks free from pullorum disease, buy from a hatchery that advertises "stock tested until no reactors were found." One blood test of a breeding flock is a step in the right direction, but there is always the possibility that the test missed some unless the program is continued until all reactors are eliminated.

* * *

Building a Henhouse

I am planning to enlarge my chicken business next summer and want to study plans this winter. In your opinion are multiple-floor houses satisfactory, or should I plan for a one-story house?

A multiple-floor house should be cheaper per bird than a one-story house. The foundation and the roof are two of the expensive parts of a build-

ing, and putting two or three floors under the same roof is economical. A multiple-floor house naturally means that birds on the upper floors must be confined the year around. Apparently this practice is coming to be more and more common all of the time.

I recently visited a poultry farm where the owner has expanded gradually and has several houses scattered around the place. I asked him whether or not he sometimes wishes the houses were all under one roof. He replied that he certainly did, but that he did most of his building before the multiple-floor house was recommended.

During the winter I suggest that you visit several poultry farms. You will pick up some excellent suggestions that will save money when you come to build.

* * *

Soft-Shelled Eggs

Although the ration I am feeding contains sufficient minerals according to the best advice I can get, the hens are laying soft-shelled eggs. What is the cause of this?

Assuming that you are correct and that the hens are getting enough minerals, it is almost certain that the soft shells are the result of too little vitamin D in the ration. Check up on the amount of cod liver oil they are getting. I am pretty certain that you will find that more cod liver oil will solve your difficulty.

* * *

Red Squill for Rats

Is there anything that can be used to poison rats in a chicken house that will not kill the hens if they should eat it?

Red Squill is poisonous to rats but has little effect on farm birds or animals. This can be purchased under several trade names. You can be pretty sure that any rat poison that is advertised to kill rats but to be harmless to other animals is made up primarily of Red Squill. You will find directions for use on the package.

* * *

Red Mites

Each spring I am troubled with red mites in my brooder house. I clean the house thoroughly and disinfect with lye, but still they seem to multiply at an astonishing rate. What can I do?

The next time you clean your brooder house, dope the floor thoroughly with used crankcase oil or a coal tar disinfectant. This should control red mites for the entire brooding season.

"That's life . . . here today — sausage tomorrow!"

BABY CHICKS

Hall's Chicks

Leghorns - Reds - Rocks - Wyandottes
New Hampshires - Hallcross (Crossbred) Chicks

All chicks produced from flocks tested for Pullorum Disease (B.W.D.) by the Official State Testing Agency of one of the six New England States, with
NO REACTORS FOUND
Tube Agglutination tested, within the preceding calendar year

"WELL BRED FROM WELL BREEDERS"

For years we've been suggesting that you

Buy Hall's Chicks Early

Recent statistical studies have shown how very sound this advice has been:

The early-hatched pullets feather better
They lay more eggs over a longer period
They lay more eggs when prices are high
They lay larger eggs when prices are high

Both Delaware with light breeds, and Maine with heavy breeds, found that

April	pullets make more money than	May	pullets
March	" " " " "	April	" "
February	" " " " "	March	" "

More Profits By 51%

reported by Delaware (A)

More Profits By 78%

reported by Maine (B)

returned by the early pullets over the late pullets.

DOWN THE Alley

By J. F. (DOC) ROBERTS

THE pictures on this page are of boys and girls who live and accomplish things in my own home community. None of these pictures was taken over 20 miles from the city of Buffalo, and

yet no one has to be told that they are truly representative 4-H Club farm children. I would like to mention the name and describe the accomplishments of each one of these boys and

girls, but after all this is a livestock column.

Picture number one (1) shows a calf which has been on feed (and that means a grain ration) after weaning

BULKLEY'S QUALITY

A. J. DAY
R. 4, AUBURN, N. Y.

for approximately six months. Picture number two (2) shows not the same animal, but one of the same group of animals when it was finished four or five months later. To me, the very fact that these two pictures show what four of five months will do to an animal which has been well started and well bred is most interesting and education-

al. Picture number three (3) shows a group of these same boys and girls' Club steers being shown at the Erie County Fair, and it is interesting to note the development that they have all made.

All this would really mean very little from a livestock standpoint if we did not have figures from John D. Walker, our County Club Agent, which give the results in money made by these boys and girls. These figures are average profits per animal over and above costs and charges of all kinds, including feed,

for the past three years. They also show the average total gain in weight over the feeding period, and the average daily gain in weight:

	1937	1938	1939
Average total gain.....	536.6	468	523
Average daily gain.....	1.84	1.63	1.83
Average return.....	\$40.36	\$23.19	\$18.35

Is it any wonder that these are happy, smiling, industrious young people? This record cannot be made by the average individual, because these returns include State Fair premiums and the finished product is sold where there is a certain amount of advertising value for the purchaser; but it does show that such projects can be carried on in any community, for I do not believe that the boys and girls in *your* farm community are any different from *our* boys and girls, and therefore it is a matter of leadership. It also proves that New York State can produce cattle of the type and kind desired by the public, and is more of a livestock state than generally thought. Also, of course, this applies just as well to the entire Northeast as it does to New York State.

In the picture with Thelma Knapp of West Falls, N. Y., with the Champion steer, please note the cornfield behind the fence and across the road, and how well that cornfield and what she has done with livestock go together. In this connection, it appears to me that corn particularly, but all grains, right at the present time are selling below their true value, and therefore, as a suggestion—and it is only a suggestion, because I can very easily be wrong—I say that most purchasers of grain should avail themselves of present prices and be well supplied for their winter and spring feeding operations.

I WATCH THE MILK-LINE TO CHECK ON THE HEALTH OF EVERY COW IN THE BARN

I KEEP MY COWS IN FINE VIGOR AND I NEVER NEED TO WATCH THE MILK-LINE. I USE KOW KARE

How Many of YOUR Cows Can LAUGH at WINTER?

The danger season in the dairy barn approaches! Month after month of gruelling winter. Rich, dry feeds, little exercise and fresh air . . . just when the feeding costs most! Here's where you lose your summer's profit unless the milk-making vigor is maintained at a level that can laugh at winter's tough going. It's common sense to start NOW to add Kow-Kare to the regular ration. It is not a food, but a scientific formula of Iron, Iodine and potent medicinal herbs and roots that act on the blood, digestion and assimilation . . . promoting extra vigor to enable a cow to meet unusual feeding demands, and maintain a resistance against costly winter ailments. The small Kow-Kare conditioning ration costs so little (in most cases about a penny a day) that every cow should receive its proven benefits.

For cows that are off feed, or suffering from disorders due to over feeding or forcing, Kow-Kare is like oil in an engine . . . it keeps down "wear and tear." A valuable aid for any cow before calving. Feed dealers, general stores and druggists have Kow-Kare. If ordered by mail, \$1.25 large size; 65¢ medium size, postage paid.

EVERYBODY, YOUNG OR OLD, appreciates molasses cookies. She is a wise woman who lays in a supply of them at Christmas time for hasty wrapping in gay cellophane or figured wax paper for the unexpected gift which invariably pops up at the last moment. Here is the foundation recipe for the new variation which is

MOLASSES ICEBOX COOKIES

1/2 cup New Orleans molasses	1/2 teaspoon salt
1/2 cup shortening	1/4 teaspoon soda
1/2 cup sugar	1/4 teaspoon cloves
1 egg	1/2 teaspoon ginger
2 1/2 cups flour	1/2 teaspoon cinnamon

Put molasses and shortening in large saucepan. Stir over low heat until shortening has melted. Remove from fire; stir in sugar. Cool. Add unbeaten egg; stir. Sift remaining ingredients together and add to first mixture. Form dough into rolls about 2 inches in diameter. Wrap in waxed paper and chill 3 to 4 hours. Slice thin and bake on well-greased baking sheet in moderate oven (375° F.) 10 to 15 minutes. Bake fresh as needed. The well wrapped roll of dough will keep for days in the refrigerator. A plain butter frosting may be used for decoration piped on through a small paper cornucopia.

Children love this jolly little marshmallow and apple Santa Claus. In her article on this page, Mrs. Hockett tells how to make him.

Christmas Trimmings

By
MRS. GRACE WATKINS HOCKETT

IT NEVER TAKES very much to introduce the element of surprise and color into the Christmas festival. The Christmas dinner itself may follow the customary pattern, yet it can be lifted out of the commonplace by adding gay little touches here and there. Red and green, the traditional Christmas colors, have been chosen as the color scheme for the following menu:

Fruit Cup or Tomato Juice Cocktail
Roast Turkey, Chicken or Pork
Baked Potatoes Creamed Onions Spinach or Broccoli
Bread and Butter Celery Pickles
Jellied Cranberry Salad
Mince Pie or Plum Pudding for Adults
Marshmallow Apple Santa Claus for Children
Salted Nuts—Coffee—Milk

The fruit cup may be a combination of citrus fruits or of canned fruits from the cellar, cherries, pears and peaches with a dash of lemon juice. Finely cut red skinned apples may be mixed with them. Green or red maraschino cherries or minced red or green colored candied apple could glorify the top of each serving.

A simple and attractive way to serve the pickles and yet carry out the color scheme is to have on the table at least two bright red apples with toothpicks inserted part way in them at an angle. On the free end of each toothpick, push a morsel of bright green pickle or a stuffed olive.

In order to simplify serving, the jellied cranberry salad may be molded in muffin tins, unmolded into lettuce cups or on shredded cabbage, arranged on a platter to pass. Or, if you have a large star-shaped mold—all the better for the Christmas motif. Then it can be used as a definite part of the dinner table decorations.

If your cranberry sauce is bought already canned, you might shape your own individual stars

from the slices, and even use the little cutout wedges to form other stars.

For dessert, the children will be delighted with the jolly little marshmallow Santa Claus pictured on this page. Here is the recipe (serves 6):

Marshmallow Santa Claus

2 cups sugar	2/3 cup dates (chopped)
1/3 cup cinnamon candies	1/3 cup nut meats (chopped)
1 cup water	1/2 pound marshmallows
6 medium sized apples	

Cook sugar, cinnamon candies, and water until the syrup spins a thread. Pare and core apples and cook in this hot syrup until tender, but not soft. Remove from syrup and cool. Combine dates and nuts and place in centers of apples.

Using an apple to form each Santa's body, proceed

GIFTS

By ROBERTA SYMMES.

I offer you each lovely gift
Of earth and sky and sea,
The gorgeous pageant of the days
Through all the years to be;
The gold of sunshine for your own,
The silver of the moon,
The pearl in every flake of snow,
The opal that is June.

The jewelled stars are yours to keep
Within your treasure chest;
Rare etchings of the winter woods,
Rain rhythm at its best,
The will to do, and courage strong,
With faith each day anew—
These, tied with warm affection's bond,
I offer now to you!

to make the head, arms, and feet with whole marshmallows, fastening with wet toothpicks. To make the face, place whole cloves and bits of candied cherry on the flat side of a marshmallow, topping Santa's head with a candied cherry half; then secure head to top of apple with a wet toothpick. Make Santa's whiskers with a piece of marshmallow.

TRIM YOUR TABLE

Here is a suggestion for a very simple yet effective table centerpiece (I know because I have tried it)—a small oblong mirror, frame concealed by sprays of evergreen, enlivened by cones, bayberry and barberry, and a few little figures skating or poised on the mirror. If you don't happen to have the makings for that scheme, go to the woods and find green moss, squawberries, the tips of white pine or other things from nature's store just waiting to be used. Perhaps the evergreens in your yard need a little pruning; some of them have lovely, soft sprays that dress up the table or mantel handsomely.

Christmas offers an unmatched opportunity to get the whole family to work together. The children will enjoy helping to make favors and decorations for the tree and table. These may be simple enough so that even the four and five-year-olds may help—for instance, strings of popcorn or cranberries, cutouts and chains from bright paper, and popcorn balls made with colored syrup.

Other little jobs in connection with the actual meal could well be allotted to youngsters—cracking and salting nuts, washing and polishing apples, laying the table, shining silver, etc. Children love to feel that they are a useful part of the celebration; and helping to set up and trim the tree, and being responsible for wrapping and labeling their gifts to others, puts the emphasis on giving rather than on receiving—that very significant phase of the Christmas spirit.

That School Lunch Box

If you want expert help with the job of filling the children's lunch boxes with a variety of healthful, appetizing, easy-to-prepare lunches, send for Mrs. Hockett's new leaflet, entitled *School Lunches*. Write to *American Agriculturist*, Home Department, Box 367, Ithaca, N. Y. Please enclose three cents to cover mimeographing and mailing costs.

in the small figure, or short and hooded as per the larger illustration. Make your own and mittens too. Sizes 12 to 20. Size 16 requires 2½ yards of 54-inch material, 2½ yards 39-inch lining, for long coat; 2¼ yards 54-inch, 2½ yards 39-inch lining, for shorter one with hood. Mittens require ¼ yard 35-inch.

STUFFED ANIMAL PATTERNS NO. E-11202 are fun to make and fun to give. Just use colorful scraps from your piece bag. Pattern envelope gives material requirements.

TO ORDER: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Department, *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our attractive Winter Fashion Catalog.

Today in Aunt Janet's Garden

Use Common Materials in Uncommon Way

FOR YEARS I have remembered to save some of my artemisia Silver King, Chinese money and strawflowers when I had them, and bayberry, bitter-sweet and Chinese lanterns. This year for the first time, I remembered to save branches from my perennial Baby's Breath which happens to be double.

The other day I went to our garden club meeting and the topic for discussion was "Unusual Dried Materials". Just for fun I listed the materials which members had put into their exhibits and others which were mentioned as possibilities. Besides those I have given, this list will certainly suggest some available to you either from garden or field:

Gourds of different colors, shapes and size; sweetgum or chestnut burrs, statice, pampas grass, milkweed pods, hydrangea, sumac, cattails, cockscomb, blackberry lily seeds, stalks of wheat or rye gathered green and dried; Queen Anne's lace, Iris pods, partridge berry, smilax, teasle, rose hips and various cones of all shapes and sizes. Besides these there are many berries and evergreens which will last for a limited period—berries from barberry, privet and dogwood for instance.

Sport Togs

COLORFUL yet sturdy tweeds, bright flannels, gay plaids, comfortable sweaters, blouses and jackets and weatherproofed materials for coats are outstanding features of the season.

SHIRT AND SKIRT PATTERN NO. 2996, one of the season's "musts", may be mixed or matched with other skirts or blouses and sweaters. The collar is convertible, shirt may be worn in or out, sleeves either long or short. Sizes 12 to 40. Size 16 requires 2 yards of 39-inch material for blouse with bishop's sleeves; 1½ yards 54-inch for regulation length skirt.

CASUAL COAT PATTERN NO. 3000 may be long and boxy as pictured

Aunt Janet's Favorite Recipe

CHRISTMAS never seems like Christmas in our house unless we have fruit cake. Here is my old favorite which I have used year after year. It makes approximately fifteen pounds of cake and improves in flavor if allowed to ripen a few weeks before using:

- | | | |
|---------------------------|---------------------------------|------------------------|
| 1 lb. butter | 1 glass grape jelly | 1 tbsp. grated nutmeg |
| 1 lb. sugar | 2 tsp. chocolate | (scant) |
| 1 lb. flour | 1 lb. crystallized cherries | ½ tsp. allspice |
| 12 eggs beaten separately | 1 lb. crystallized pineapple | 1 tsp. powdered cloves |
| 5 lbs. seeded raisins | 1 lb. blanched, chopped almonds | (scant) |
| 1½ lbs. citron | 1 glass grape juice | 2 tsp. rose water |
| | 1 tbsp. cinnamon | |

Soak almonds overnight in rose water, and fruit in the grape juice. Cream butter, add sugar and cream until light. Add yolks well beaten, spices, jelly, chocolate and part of the flour. Fold in beaten whites. Dredge fruit in part of the flour and add gradually to the first mixture. Add nuts last. Steam four to six hours. Brown slightly in moderate oven for 30 minutes. Watch carefully to prevent burning. Other crystallized fruits may be substituted if preferred to those mentioned in the recipe. Baking-powder-tin-sized cakes made from this mixture make ideal Christmas gifts. Wrap them in oiled paper and decorate with Christmas wrappings.

Remember last winter?
Enjoy Happy Heating
next winter!

INSTALL NOW FIRST PAYMENT NEXT YEAR

You can now enjoy luxurious heating comfort with a Utica Heating System and, best of all, you can pay for it in easy monthly payments. You can have the benefit of a warm home *this* year and start paying for your heating system *next* year. A Utica Heating System is economical both in first cost and in the amount of fuel it uses. It will burn coal, oil or wood.

AUTHORIZED DEALERS EVERYWHERE

UTICA dealers are skilled heating men and they will gladly make an analysis of your heating conditions to determine the best type of heating system for your particular home, **YOUR PRESENT HEATING SYSTEM IS NOT DISTURBED AND YOU ARE NOT LEFT WITHOUT HEAT DURING INSTALLATION.**

All UTICA HEATING EQUIPMENT is backed by a *Guarantee Bond*. Don't miss this opportunity to investigate. Without obligation, you may learn how reasonably a new Utica Heating System can be purchased on terms to suit your convenience.

A Tree-Day Frolic

A BIG hay-rack and four horses; that was the "tree-day" outfit. Our whole class of thirty-one was in the hay-rack. For a number of years it had been customary for each class at the college where I was once a student to plant a tree on the campus, to be known afterward as the class tree.

April was the time for this, usually some Saturday. Trees might have been procured within a mile of the college; but the intention was to bring this tree home from a distance of at least five or six miles, and make a day of it.

Every one of the class party in the hay-rack was supposed to be on the lookout for a suitable tree. Some of the party were dressed in fantastic attire, particularly in battered "tall" hats and coats of strange colors. A few put on comically grotesque masks.

The owner and driver of the cart and team knew beforehand that various vicissitudes were to be expected before the day was out, and hence had to be offered very liberal inducements, with a guarantee for damages.

From the moment the cart drove away from the campus in the morning, there issued from it a continuous noise. Two or three dogs accompanied us. All passengers on the highway whom we met were hailed with salutes and questions.

But after all, no harm was intended. It was simply a holiday overflow of high spirits and youthful exuberance.

We had a span of white horses and a span of "Normans." Every one of us felt bubbling over with spirits; we longed to shout, to race, to turn hand-springs, and astonish the country!

There was "Dobe" Williams, swinging his long legs from a board seat across the front end of the rack at the driver's right, and Clate Newbegin—a Georgian—on his left. Dobe bore a tin trumpet five feet in length, while Newbegin performed upon an alto horn.

Behind him, sitting on a barrel which occasionally tipped over, with a high but shocking hat on the back of his head, rode Luth Carmichael, waking dulcet echoes with a silver cornet. Then there were little "Toby" and Roney Gilchrist, in unchangeably grinning pink masks, Scotty Wilkins pounding on the bass drum, and not to particularize needlessly, the whole class perched on boxes or roosting on board seats—all ready for some comical vagary.

Over the long toll-bridge we rumbled, through the quiet little village on the other side, and out into the country beyond. Our objective point was a tract of high pasture-land and woodland on the hills beyond the river.

But even as we climbed the hills, Scotty shouted, "What a beauty of an oak!"

It was indeed a handsome tree, symmetrical and well-grown. But nearly every one said, "Too big! We couldn't get it up, Scotty!"

"We can get anything up!" cried Scotty.

But we drove on past the tree for a mile or more, and searched long and boisterously in the woods. Earnest discussions of various maples, elms and beeches followed. It was difficult to suit a majority, and all the while Scotty argued persistently for his oak. The opposition wavered. Scotty got a vote to return for it, and we drove back. It was a sturdy tree, however, more than four inches in diameter, too large for ordinary transplanting.

"'Twill be king of the campus!" exclaimed Scotty, grandiloquently. "An eternal green monument to the strength

and pluck of our class!" And leaping from the rack, spade in hand, he fell to work.

We soon found, however, that something more than the tools we had brought was necessary to uproot that oak. It had big, deep-delving roots, and these ramified round stones underground, which it was necessary to dislodge. Dobe and the driver, with a span of the horses, were sent off to borrow or buy more efficient tools—crowbars, axes and chains. They drove three miles, and returned shortly after noon, with the most miscellaneous outfit ever collected for the purpose of forestry, I feel sure. Dobe had borrowed of everybody whose premises he had passed. The rack looked to be half-full of tools. There were six crowbars, ten axes, three long ponderous wooden levers, such as farmers call

By C. A. STEPHENS

"pries", not less than eleven chains, a part of a stump machine, a tackle and blocks and an anchor weighing at least seventy-five pounds, with one fluke broken off, but having a hundred feet of cable attached to the ring. This implement had been borrowed of a retired mariner, now turned farmer.

There was also a plow, and still more ridiculous, a wheelbarrow, a cultivator, four hoes and a pitchfork! The driver, poor man, was wholly nonplussed, for with serio-comic gravity, Dobe had insisted to him that all these would be needed and hundreds more!

Seeing the man's perplexity, Scotty, Toby and others at once began rating him and Dobe for not borrowing more tools.

"Wal, maybe you do want 'em!" exclaimed the driver, incredulously. "But how you are ever going to remember which is whose, when you carry 'em home, is more'n I can tell! I'm sure I can't." Dobe assured him that this

was not a matter of the slightest consequence—the one object being to borrow tools.

The entire party then fell to work to uproot that oak. It was an absurd spectacle—youths in tall hats and long coats, wholly unaccustomed to the use of crowbars or spades, all swarming round that devoted tree, pushing, pulling and hustling one another to the accompaniment of a running chorus of jokes and cheers.

Here were seen three fellows astride a big pry, swaying up and down, while on the other side, seven or eight had hooked the remaining fluke of the anchor beneath the tap-root of the tree, and were tugging away at the old hawser. Occasionally rose outcries of anguish, as one or another jammed his fingers or had his head rapped by some overzealous fellow worker.

The driver stood bewildered. He was still struggling, but in vain, to discern some trace of common sense in the proceeding.

At last somebody bethought him to hitch the hawser of the anchor-hook to the axle of the cart, when the four horses pulled out the tree, amidst great cheering. It was then heaved into the rack, which it quite filled, extending out some distance behind. The redundant kit of tools was loaded on; and then, with thirty boys perched on top or hanging on by the rungs of the rack, the drive home to the college began.

We had turned down a long hill, when, on a sudden, a great pile of shovels, axes, chains, hoes and crowbars slid out at the forward end of the rack against the heels of the long-patient horses. They sprang forward, upsetting the driver from his board. Before the reins could be drawn tight again, they were careering down the hill at full speed. Some of us, I remember, were clinging to the tree, some to the rack rail, and a few were able to jump out.

"Never desert the tree!" shouted Scotty, in the midst of the uproar; and at this juncture Dobe Williams was possessed of an idea.

"Cast anchor, fellows!" he bawled. He pitched the rusty old kedgeree overboard.

The other end of the anchor cable was still fast to the rear axle of the cart, and about forty feet of it ran out.

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

Dilemma

My father says I must not pray
For things I want on Christmas Day.
My Dad's a minister, and so
I think he really ought to know.

God, I thank you for my mother,
For my father and my brother,
For the snow that came last night,
Making all the hillsides white;
For the cookies on the shelf
And a chance to help myself.
I will be a better boy,
Sharing every Christmas toy. . .

'God, you're very wise, and so
I s'pose that you already know
A bicycle should really be
By every small boy's Christmas tree.

—Julia Lounsberry Wallace,
119-11 190th St., St. Albans, N. Y.

For some distance the anchor was dragged perilously after us, alternately catching in the ground and bounding a dozen feet in the air.

Presently, as we neared the bottom of the hill, the fluke caught under the great root of a maple beside the road. Immediately there followed a frightful jerk. The four horses went clear through their harnesses and ran on; and at about that time the most of us, along with the tree, plow, cultivator and stump machine, were turning somersaults out of the rack and piling ourselves up in a heap farther down the road. Luth Carmichael caved in the bass drum, and was seen to be partly inside it.

We were anchored!

Nearly everybody was more or less bruised, bumped or otherwise damaged. Some crawled out and sat nursing their injuries. Scotty alone got astride the tree, calling all to witness that he had never deserted it.

The fun was quite effectually knocked out of most of us however. Several limped away to secure the services of a physician. There was a good many cuts and bruises to be bandaged.

The unquenchable Scotty and those who had fared best contrived to recover the horses, and finally brought the tree to the college campus at about ten o'clock that night. The borrowed tools were temporarily left in a heap by the roadside, but were returned to their owners, after vast trouble, by a committee of four, sent out for that purpose.

On the way to prayers the next morning, the sophomore class presented a picturesque but rueful appearance. There was one man on crutches, several were limping, and six or seven wore prominent white bandages. It was not till the following day that we mustered in good form enough to set out our tree on the campus.

The expenses of the trip, including damages and doctor's bills, reached sixty dollars.

Our class oak proved a problem in forestry. Twice, subsequently, it was pronounced dead. But by the following spring a few fresh, pale leaves would appear on it. We employed various tree-doctors to see it, prune it and dress it—for if the tree died, it would be a bad omen, according to current college auguries. It survived, but it has never grown well, and is far from being the "king of the campus."

The Song of the Lazy Farmer

goes on in this here world, for when the dog's asleep, all curled up for the night beside the fire, I ain't in no rush to retire. I like to read the latest news, a-sittin' there without no shoes, and keep informed on ev'rything that happens in this world, by jing! Of all the blessings that we've got, good light is best, as like as not, it helps us to enjoy our life and get on peaceful with our wife!

WHEN winter comes, with early nights, it seems to me electric lights are just about the finest thing, that ever was devised, by jing. I recollect, when I was young, the coal-oil lamp that always hung just so the deepest shadows fell upon my corner, I could tell if books was upside down or not, but that is all the good I got from that there lamp. I used to squint and try to read the lines of print, but readin' sure was hard to do, with that there light that filtered thru that smoky chimney, for the draft would smoke it quickly, we would haft to strike a match to find that light, altho we cleaned it twice a night.

But now we press a button and it's light as day, it's surely grand that we can see as well at night as when the sun is givin' light. A feller likes to read when he don't have to pucker up to see the print, and so I sit up late, to keep myself right up to date on what

Personal Problems

Hold Tight!

What would you say of a man who has been married for 25 years to a woman who has worked in the house and outside to help him make a success . . . denying herself pretty clothes and good furniture and modern helps that they might save money and get ahead . . . who falls in love with a girl 15 years younger than himself and asks his wife to give him a divorce and get out so he can enjoy the fruits of her labors with a new love?—Discarded.

I'd say the man was an ungrateful wretch and hanging's too good for him. Then in the next breath, I'd say the woman was a big fool to make such a slave of herself unless it was absolutely necessary; too often hard work puts her under the turf before she has a chance to enjoy a penny of what is saved. Then I'd take another breath and tell her not to leave her happy home, but to hang on, treat this new love of her husband like a disease and expect him to get over it, which he so often does.

Many husbands between 50 and 60 get these flighty spells . . . their good old patient wives aren't in it with the glamour gals, and they're all for giving them the gate. But habits of so many years aren't easily laid aside. When the bills begin to come in and Pappy has to stay up until one or two o'clock three or four nights a week to entertain his new young lovely, he's going to creep back to the home fires to rest his weary bones. And his faithful wife sitting there in her usual place will be mighty easy on his eyes and he'll decide that peace and comfort . . . while maybe not so glamorous . . . are worth more in the long run.

It'll hurt . . . but forgive him when he comes around with that hang-dog look in his eyes. You'd nurse him through small-pox, wouldn't you? An attack of second romance is much worse!

Stand On Your Own Feet

Here is a problem which many young people wonder what to do about. How should I have handled this situation?

The other night I took a girl out to a party to a near-by lake where friends of hers had a cottage. There were six couples. I do not go with the girl, steady; we are just friends and she invited me as her escort.

We had a pleasant time and about 11:30 the suggestion was made to go to a tavern which is run for the lake resort and which does not enjoy too good a reputation. They all, including my friend for the evening, were right in for going . . . and what could I do or say?

I do not go to taverns; I am a leader in our young people's group of our church and do not feel that I should lend my presence to such places, even though I might, personally, like to go, which I don't. But I am also not a prude or a spoil-sport and wouldn't it have looked like I was a heel to have righteously said, "I'm sorry; I don't go to taverns," thus implying I thought myself better than my companions, which I don't. They are nice kids . . . our ideas of fun just aren't the same, that's all.

Well . . . I went with them. Then came

"Hilda! I think you gathered the wrong eggs today."

IT IS EASIER to discuss a personal problem with an absolute stranger than it is with a friend, unless that friend be unusually intimate. If you have a problem, write to Lucile, Personal Problems Editor, American Agriculturist, Box 367, Ithaca, N. Y. If you wish, your letter will be held entirely confidential, and Lucile will send you a personal reply by mail.

the time to order our drinks and I again couldn't be a heel by ordering lemon pop while the others took mixed drinks, I tried I? So, with great distaste, which I tried to conceal, I ordered a glass of beer and contrived to make it last a long time. But I wasn't happy while I was there and felt there should have been some way out of my predicament. Was there?—Reluctant Rowdy.

Now . . . you've put me in a spot. If I say you did right to go . . . indignant parents will burn up Uncle Sam's mails denouncing me as a menace to the morals of youth. If I say you should have refused, other young people will say that's not giving them the answer they want . . . for they just can't do it, when with a crowd who want to go out for a "good time".

Certainly, even though we are against taverns and what they stand for, we do imply our approval by being seen in them. However, I think in your case, there was hardly any choice left you but to go. Your mistake lay in not knowing the amusement tastes of your companions better than you did. But, I don't think you would necessarily have been labeled a "heel" if you had declined anything alcoholic after you got there.

You know the old saying, "You can lead a horse to water, but you can't make him drink." A boy (or girl) caught in like predicaments as yours can't deliver temperance lectures to his friends and in righteous indignation decline to accompany the crowd; but he can tell them, in a nice way, that liquor doesn't agree with his manners and metabolism and he's much happier with a glass of soda, or milk. You might be surprised at the reaction.

Proceed Cautiously

Would it be right for me to accept a date with the boy my girl friend has been going with, knowing that he no longer has any feeling for her, although she is still crazy about him? I like him very much and he has been asking me for dates for a long while.—Unhappy.

If you value the friendship of this girl and do not want to hurt her feelings too badly, then you had better wait until the boy has definitely broken with her and had a few dates with others, before you begin going with him.

Divided Over Dancing

I have gone with a girl for a long time; we are what you might say, engaged. But this summer we've fallen out over dancing. She loves dancing; I detest it. She insists on going to dances at least once a week, and then she dances with other boys, as I do not even know how and think the modern "jitter-dances" worse than silly. Naturally, I don't like that, and we quarrel all the way home. I think if she really cared for me, she'd give up dancing. She says I should learn how to dance. What do you think?—Not a Jitterbug.

I think that both sides should make concessions. You might attempt to learn to dance . . . you might surprise yourself and enjoy it. Your girl, to be fair, should not insist you take her to dances every week and then spend the evening dancing with other boys. She should, instead, try her hand at teaching you and if you can't learn, go only occasionally, rather than often.

Certainly, I'd come to some sort of agreement before becoming definitely engaged. Difference in entertainment tastes can cause much trouble and unhappiness.

for Christmas Dinner... OCEAN SPRAY CRANBERRY SAUCE

Ready
to
Serve!

Take all the time you need for the rest of the Christmas dinner. Leave the Cranberry Sauce till the last minute. Then take a can of "Ocean Spray" Cranberry Sauce off your pantry shelf . . . remove the lid . . . and slide out the rosy mold of jellied Cranberry Sauce . . . ready to slice and serve.

You can **DEPEND** on Ocean Spray Cranberry Sauce being top quality. It's packed by a cranberry growers' cooperative producing 80% of the world's cranberries.

**Ocean Spray Cranberry Sauce Means
Quality - Economy - Convenience**

Cape Cod's Cranberry growers invite you to try it!

This Home-Mixed Cough Remedy is Most Effective

Easily Mixed. Needs No Cooking.

Cough medicines usually contain a large quantity of sugar syrup—a good ingredient, but one which you can easily make at home. Take 2 cups of granulated sugar and 1 cup of water, and stir a few moments until dissolved. No cooking! No trouble at all.

Then get from your druggist 2½ ounces of Pinex, pour it into a pint bottle, and add your syrup. This gives you a full pint of truly wonderful medicine for coughs due to colds. It makes a real saving for you, because it gives you about four times as much for your money. It lasts a long time, never spoils, and children love it.

This is actually a surprisingly effective, quick-acting cough remedy. Promptly, you feel it taking hold. It loosens the phlegm, soothes the irritated membranes and makes breathing easy. You've never seen anything better for prompt and pleasing results.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, a most reliable, soothing agent for throat and bronchial membranes. Money refunded if it doesn't please you in every way.

If Your Child Has A NASTY COLD

Relieve the Misery
As Most Mothers Do

Rub chest, throat, and back thoroughly with Vicks VapoRub at bedtime. Then spread a thick layer on the chest and cover with a warmed cloth. Right away VapoRub goes to work to relieve the misery.

VapoRub brings double relief because of its double action. It acts both as a stimulating poultice and a medicated vapor. Its poultice action penetrates the surface skin; its soothing vapors are breathed direct to irritated air passages. Try it. You'll find that often by morning most of the misery of the cold is gone.

VICKS
VAPORUB

at no extra fare To California

Why take an ordinary trip to California—when all the breath-taking scenery of the Pacific Northwest can be yours to remember forever—at no extra fare?

Dazzling peaks of the Rocky Mountains piercing the clouds—28 ranges from windows of the North Coast Limited! Forests aflame with autumn colors or tinselled with winter snows! Whatever you do, don't miss the Pacific Northwest on your way to or from California.

You'll feel right at home on a comfortable Northern Pacific train—and you'll enjoy famously good food—including those "Great Big" Baked Potatoes. Just mail the coupon and we'll gladly tell you all about the trip.

THE SECOND STEP

(Continued from Page 1)

milk dealers, as it has more or less in the past. It is the farmer's milk. If he wants to keep it home, he may be unwise, but it is his privilege, and the situation must be such that he and his representatives can, as any other business man does, place his own price on his product, providing that it is a fair and reasonable price.

Kick Out the Trouble Makers

We must turn united organized opinion of both farmers and business men on any individual, any group, any politician, and any publication that uses milk to promote their own selfish purposes. It is time to kick out the trouble makers. Every time a demagogue wants to go to town with the masses he begins to talk about the high price of milk, or starts a milk investigation. I am all fed up on milk investigations. I question the sincerity back of most of them. Out of at least 20 milk investigations in the last several years I have yet to know of one that found anything particularly crooked. Inefficiencies—yes; they are in all business. From some of these investigations the facts have been distorted and fed to the public. When the investigation gives the industry a clean bill of health, little is said about it. No wonder the consumer thinks milk is high priced and cuts consumption.

Both consumers and farmers are regularly and constantly misinformed about milk. What can the farmer believe when he reads constant misstatements or half statements of fact, or when he listens to some radical who has no real interest in the farmer, but who is only interested in climbing into power and into the limelight?

Press is Dairymen's Friend

So far as most of the press is concerned, it is one of the best friends the farmer has. In my opinion, the press has not had much cooperation from the dairy industry. The press of this country is for the most part sane and constructive, and if it doesn't get the facts to its readers it is almost always because the dairymen have not made those facts available.

Milk at its present price is a comparatively cheap food. Any nutrition expert will tell you that there is more food value in a quart of milk than there is in most other foods costing twice as much. But try to get any consumer to believe that! Why? Because until lately practically every other commodity in the world has had more advertising than milk, and much of the advertising milk has got has been of the wrong kind. When consumers yell about high priced milk instead of meeting the arguments with a thousand facts that are available to prove that it is the greatest food in the world, and cheap at the price, what does the industry do? When the yell becomes too loud, the dealers reduce the retail price and take it out of farm prices. I maintain that this whole psychology of the retail price of milk is wrong both in country and city. Milk is not too high, but whatever the price is, be it high or low, the dealer takes out his operating costs and his profit. He has to.

Kick Out Bad Dealers

It is fair to say a good word for the legitimate distributor. He performs a necessary service. His costs, particularly his labor costs, are mounting. In the same breath I must say also that we need to beware of a lot of milk dealers as we would beware of the Devil. I charge that there are many milk dealers in the New York milk shed, who have lied, cheated, chiseled, and upset the milk industry for more than

a quarter century. That group always becomes particularly active when the farmers attempt to get together, and cunningly uses the time-worn device of setting farmer against farmer, and farm cooperative against farm cooperative. It is time that the industry cleaned house with this type of parasite, and the best service that the legitimate distributor can render his own business is to take the lead in driving dishonest and destructive milk dealers out of business.

Time to Stop Fighting

This leads to my next and last principle. It is time for farmers to stop "rowing" among themselves, to resist the propaganda of their enemies, and to believe in and work with their neighbors and friends who are sincerely interested in the welfare of the dairy industry.

Unfortunately, this "rowing" has not been confined to individual farmers. Cooperative leaders have been even worse. There have been times when leaders of the cooperatives have been more bitter toward one another than toward the milk dealers. The best progress by far that has been made by this group whom we are honoring tonight is not these better prices, good as they are; it is in the demonstration of the principle that not only individual dairymen but their organizations can work together, and that means something permanently good for all of us.

Business Men Must Also Back Farmer

Now I must also express my enthusiasm for another step in progress, evidenced many times recently in this fight of the dairymen for a living price for milk, and very apparent here tonight. I refer to the increasing understanding of the farmer's problems and the support of the farmer in solving his problems by the business men of New York State.

The business man is the owner of property; so is the farmer: he is an employer of labor; so is the farmer; both acknowledge the right and the wisdom of constructive labor organization, but both the business man and the farmer will fight to the end to oppose radical and communistic labor organization, and will unite to prevent radicals and Communists who have no

"My word . . . SNOW!"

sincere interest in the farmer from getting a stranglehold upon the agriculture of this country. The farmer, in common with the business man, is against all the "isms" except Americanism.

I'd like to see every Chamber of Commerce and every other group of business have this definite program for cooperation with agriculture:

FIRST. Complete appreciation of the truth that unless the farmer prospers, no one else will.

SECOND. A keen desire to get better acquainted with farmers and their problems, which will mean understanding, without which no progress whatever can be made.

THIRD. The stopping of all critical talk of farms and farmers by business men. Don't say, for example, that farmers are inefficient. Some of them are, of course, but the majority are just as efficient as other business men.

FOURTH. Don't criticize unjustly the farmer's organizations. You will make no mistake in supporting the organization and the plan which the majority of farmers themselves support. Most of the attacks on farmers' organizations come from enemies of both agriculture and business.

AND LASTLY. Join with the farmer's organizations in their programs to take government out of business and agriculture, to reduce taxes, and more important still, to maintain the fundamental American principles of liberty and freedom of action which made this country great.

Now I come to a very pleasant duty. It is a part of my philosophy of life that a man cannot read his tombstone when he is dead. Most of us are all too prone to criticize, too slow to praise. So it is indeed a privilege in the name of all farmers, in fact, in the name of every citizen, to express here tonight all appreciation and honor to those who have been responsible in helping dairymen get a living price for milk.

Fifty Thousand Frenchmen

You remember the old saying that fifty thousand Frenchmen cannot be wrong. That is right. Lawyers have a similar saying that you cannot indict a whole community. I submit that 90 per cent of the dairymen shipping milk in this milk shed, plus the Conference Board, plus the Federal and State governments, plus the Colleges of Agriculture, plus many of the newspapers, plus thousands of business men, cannot all be wrong in their support of the Bargaining Agency and the marketing agreements.

Master Cooperators

And now I want to call to their feet the Directors of the Metropolitan Bargaining Agency, together with their executive secretary, Mr. Charles H. Baldwin. Gentlemen, it has been the custom throughout the ages to honor great individuals who have done their bit to promote progress and the welfare of mankind. George Washington termed agriculture "the most healthful, most useful and most honorable employment of man." Recently, outstanding individual farmers have been honored in America by conferring upon them the title of Master Farmer. Never to my knowledge, however, has any group of farmers been commended or honored for high service. Therefore, this is the first occasion of its kind in history. We who are gathered here tonight, and the thousands of men and women whose lives have been made happier by your efforts, hereby express to you our appreciation.

All power and all honor to everyone of you who has had a part in the leadership of this movement that means so much to every citizen!

**MASTER COOPERATORS, PLEASE
BE SEATED!**

The 1939 Potato Season

(Continued from Page 6)

difference in price ranged from one cent to five cents per peck higher for the packaged goods. In the case of New York upland-grown potatoes, the peck-packs sold for five cents per peck or twenty cents a bushel more than those sold in bulk. About 57 per cent of all the potatoes sold in consumer packages were grown and packed in Maine. Insofar as the quality of New York grown potatoes is as high as that of Maine potatoes, there is every reason to believe that this method of merchandizing should and will increase in New York.

One of the faults with our local-grown crop is its lack of cleanness or freedom from dirt. Brushing is on the increase. In the far west and in the south, much of the crop is washed before shipment. As competition with the washed product in our eastern markets increases, we may some day find it profitable to wash our potatoes.

Either washing or brushing would greatly improve the appearance of that portion of our crop which is dug from heavy wet soils. In Doctor Findlen's market study, it was found that 5 per cent of the retail samples classed as dirty, 89 per cent as fairly clean and only 5 per cent as clean. Experience has proven that brightness is an important factor in creating consumer preferences. We should not forget that brightness and cleanness are usually associated.

From what has been said here in favor of this new idea in potato marketing, no grower should conclude that there is a potential profit of 20 cents a bushel in it for his entire crop. Extra labor to do the packing, ample grading and brushing facilities and the cost of paper bags must all be considered. But most important of all is the fact that it will not pay to attempt to pack potatoes fancy unless and until we

have fancy potatoes to pack. Some of the crop as now grown cannot be graded profitably and should be sold as unclassified. Here then, is a good reason why we should not ignore any one of many recommended production practices and assume that the all important problem is marketing. There is not now and there never has been a time when it was not easier to sell good potatoes than poor ones.

National Grange Maps Program

(Continued from Page 8)

belief that farm credit should be continued on a cooperative basis, rather than under complete domination by the federal government.

Results of reciprocal trade agreements with foreign countries were condemned as opening the American market for the dumping of imports of

A Child's Gift

By ETHEL A. M. TOZIER.

The Christmas star hangs low in the sky,

The moon shines bright and still.
I think I could reach the both of them
If I climbed to the top of the hill.

I'd bring back the moon for a tinsel ball

To hang on my tree so bright,
And pin the star to the topmost branch
For the Christchild's gift tonight.

farm products without resulting benefits to American agriculture. The resolution said in part:

"The American people work under a high level of fixed costs which are a first charge on the proceeds of production. Domestic prices are affected adversely by imports, however small, or cheaper commodities. The results of reciprocal trade agreements have been to extend the unfavorable effects of foreign competition upon American farm prices."

It also called upon Congress to rescind present trade agreements which are injurious to American agriculture.

On another controversial point the Grange renewed its stand that the Forestry Service be continued in the Department of Agriculture. There has been considerable in print about proposed removal of Forestry to the Department of the Interior. F. A. Silcox, chief forester, who recently declined an appointment as undersecretary of the interior, appeared before the Grange and told the delegates "I can truthfully say forestry is part and parcel of the Department of Agriculture." The Grange also recommended that administration of grazing on public lands be transferred from Interior to Agriculture.

Opposed to "Discriminatory Taxation"

The Grange opposed "discriminatory and punitive tax legislation designed to destroy and unnecessarily burden any legitimate class or type of distribution."

While chain stores were not mentioned in the resolution, discussion on the floor indicated delegates had this in mind. It was made clear that the Grange opposes only such taxation along this line as appears to be "discriminatory and punitive." The committee report on the subject said: "We recognize the fact that excessive or unnecessary costs of distribution cause the farmer to pay more for his supplies and receive less for his products. We commend all efficient methods of distribution which result in lowered costs to the consumer and are fair to the producer. We disapprove all efforts, legislative or otherwise, which are discriminatory and which hamper efficient and economical methods of distribution."

With an easy swing...

CUTS clean!

Get a saw that cuts! A Disston Hand Saw... cuts clean and fast with an easy swing of your arm. Holds keen edge! Has temper and tension that make the saw seem alive. Balance makes sawing easier; work better.

Famous D-8, 26", \$3.50, "The Saw Most Carpenters Use." \$3.15 for D-7, 26"; \$3.85 for D-23, 26". Also KEYSTONE made by DISSTON Hand Saws. Big value; popular prices. Cross-cut, \$1.00 up; Rip, \$1.50 up.

FREE BOOK WILL HELP YOUR SAWING

Disston Saws help your sawing. Disston Saw, Tool and File Manual helps keep your saws in good condition. Tells how to joint saws, shape teeth, set and file all kinds of saws. Hints, in words and pictures, on using saws and tools.

HOW TO BUILD IT

FREE plan sketches for firesafe, long-lasting concrete farm structures

Our 72-page book, "Plans for Concrete Farm Buildings," gives detailed information on how to mix, form, reinforce and place concrete. Shows plans for all types of firesafe, permanent, thrifty farm buildings of concrete—dairy and cattle barns, hog and poultry houses, grain bins and corn cribs, ice houses and smoke houses—farm houses, too. Write for free copy. (Paste coupon on penny postal.)

You can build these improvements yourself. Or get a concrete contractor. Your cement dealer can put you in touch with a good concrete builder.

Use Stazdry

-the Amazing NEW Litter

Put your layers on Stazdry litter. It is comparatively dustless. Gives off moisture readily and is light in color.

Stazdry absorbs about three and one-half times its own weight in water. It is light in color and compared to some other litters it is practically dustless. Stazdry doesn't have the tendency to pack down hard—and it never cakes. Air circulates through it and therefore it tends to give off moisture faster and to stay drier over longer periods.

An impartial test carried on at the New Jersey Agricultural Experiment Station showed Stazdry leading other commonly used litters in 10 out of 13 desirable qualities.

The compact 100-lb. bales of Stazdry are easy to handle, can be stored in less space and cover a surprisingly large area of floor space. Order Stazdry from your local feed dealer. Give it a trial. You'll soon discover its economy and many other advantages. Manured Stazdry makes an exceptionally good fertilizer.

The Economy Litter

Kernels, Screenings and Chaff

By H. E. BABCOCK

A FRIEND of mine out hunting pheasants this fall tramped an entire forenoon without finding a spring or a stream where his dog could get a drink.

The other day, driving by a farm home, I noticed a bunch of hens nervously picking at the pump to the well in the front yard. **No one needed to tell me that the well was dry and the birds frantic for water.**

Passing by other farms I saw, as most of you have seen, many bunches of cows and young stock moving about in that peculiarly restless manner which identifies the thirsty animal.

I have seen hundreds of acres of winter grain turning brown, not from cold weather, **but from lack of moisture.** It is impossible to drive five miles on any road and not pass a farmer hauling water or see one ushering a string of thirsty livestock to some back-lot spring.

I AM WORRIED

It is not, however, the present evidences of the worst drought the Northeast has ever experienced, depressing though they are, which worry me today. **What does worry me is the hundreds of silos and dairy barns I drive past with the daylight showing through from a half to two-thirds of their upper structures.** I know that the cattle which must be carried through the winter on these restricted supplies of roughage are in the poorest condition I have ever seen them go into the barn in the fall. What will their condition be by late February or March?

EVER NORMAL GRANARY

Meanwhile, there is piling up on my desk a whole series of reports and explanations about how the Government is caring for the surplus corn in the Mid-West. Thousands of temporary steel bins have been erected. Millions of bushels of corn have been impounded. **Like a giant jack screw, Wallace and his Commodity Credit Corporation support the corn market and force it ever upward.**

Grass Silage

Again we are having a satisfactory experience with grass silage. In fact, the only things which are going to get us through the winter are the hay we carried over from last year, and the grass silage we made in June. **If we had to depend upon the hay we cut after the first of July and the corn and soybeans we grew this summer, we certainly would be out of luck.**

At Larchmont we have opened one silo which was filled with straight green timothy last June. Neither phosphoric acid nor molasses were added. Except for some slight spoilage around the doors this timothy silage is coming out sweet and wholesome **and it proves to be exceptionally palatable.** We are feeding it to a bunch of Angus cows with calves at their sides and from the way the calves are growing

these Angus cows seems to be milking exceptionally well on timothy silage, mixed hay, and about four pounds of grain apiece a day. The calves, of course, also get some grain in a creep.

At Sunnysgables we have opened a silo which we filled with a mixture of winter barley or wheat in the early dough stage, and green legume hay. We are simply delighted with the product.

Our experience confirms my belief that it is going to be possible to make silage out of first cutting green clover and alfalfa in the Northeast without buying very much phosphoric acid or molasses to mix with it. Instead, I believe that we can grow winter barley or wheat as a source of carbohydrates.

Saving Labor

Several years ago we decided to break faith with the rule, which is iron-clad on so many farms, of feeding livestock every time the family eats or at least twice a day.

We still continue to feed our few dairy cattle twice a day when they are in the barn, and if I really wanted to force them for milk I think I would feed them three and possibly four times a day. We also feed our work horses twice and three times a day, though I think that in following this routine we are probably more the victims of habit than the servants of common sense.

When it comes to all other classes of livestock, however, dry sheep, dry dairy cows, young stock, loose horses which aren't working, and all of our beef herds, **we feed only once a day.** This

feeding we make at the most convenient time in the afternoon. This winter, while we do not advocate the practice, we are dispensing with hay altogether and relying on grass silage and grain for feeding most of our livestock.

Our rule is to feed enough grass silage so that the animals will fill up and lie down and still leave in the bunks a fair feeding for the next morning. Then, we feed on top of this silage our grain ration.

This year we are using the same grain mixture for everything to which we fed any concentrates. It analyses about 14% protein, carries 4% fat, and the total digestible nutrients run almost exactly 1500 pounds to the ton. For all of our young stock, that is animals under a year and a half of age, our general rule is to feed a pound of this ration to each cwt. of live weight.

1940 Pastures

From what I am able to observe in regard to the way my own pastures are going into the winter, I am under the impression that in many sections of the Northeast we can't expect very abundant grazing before mid-June next summer. Furthermore, it will take better than a normal season, so far as amount of rainfall is concerned, to give our livestock much of anything to eat after June.

I base my rather gloomy predictions on the fact that it looks to me as though there are hundreds of thousands of acres of pastures which normally grow a fair amount of wild white clover which will have to start from scratch next spring. That is, from seed — seed which, I hope, was produced before the dry weather killed off the clover plants. If this is the case it certainly will be well into June before we have wild white clover plants large enough to furnish much grazing. Perhaps, however, I am over-pessimistic.

At any rate, to be on the safe side, as I previously announced, we are going to sow three fields at Sunnysgables, two of them plowed out of permanent pastures and the third adjacent to a permanent pasture, to sweet clover in December. Our hope is that this sweet

clover will come along so that we can turn into it by July at least.

If we get a good stand we will graze it quite closely and next fall in September or late August, depending on the weather, will sow some permanent pasture seed mixtures right in the sweet clover with the idea that as the sweet clover dies out the next year the permanent pasture clovers and grasses will come on to take its place.

We did just this several years ago and got in this way one of the finest pastures we have ever had.

Horse Power

The picture on this page is proof of the fact that despite the appearance of the low-cost rubber-mounted light tractor, we at Sunnysgables have not yet lost our faith in horse and mule power.

We don't know yet how our totals for gasoline, oil, repairs, and depreciation on our truck and tractor are going to show up for the year 1939. **We do know, however, that these totals for 1938 shocked us.** If I recall correctly, I announced on this page that we weren't going to let them get as large this year. Nevertheless, I shan't be surprised if they are.

At some point in the economy of running a farm I am sure that horse and mule power will continue to justify themselves. I admit I don't know just where this point is, but I am trying to find it out.

Because I believe sincerely that the horse and mule will be with American agriculture for a long time, I am becoming more interested in horse-drawn farm implements than I ever have been before in my life. You see, I have a suspicion that if we ever gave old Dobbin half a break in the form of rubber mounted equipment on roller bearings, and with adequate lubricating systems, we would be quite surprised at the horsepower he will deliver for ten cents worth of oats.

Perhaps better engineered horse-drawn equipment is one way to get the present generation of farm boys more interested in a greater use of horse and mule power.

Last spring we purchased a pair of mules with more or less the idea of trying the beasts out. Nothing we have ever done has quite so upset the farm routine. Right at the very beginning Jake opined that a man just couldn't drive mules and retain his self-respect as a teamster. Then Howard took them on and in due time reported that he had the key to the successful use of mules. "In their case," he said, "the teamster should not drive the mules, BUT FOLLOW THEM." At any rate, our general experience was so satisfactory that we have now added a sec-

ond pair of the long-eared rascals to our farm power lineup. The team shown above are young fellows. The mule in the foreground is not yet three years old. His mate is around four. Yet the pair already weighs better than 2800, and one can almost see them grow from day to day. They are supposed to be full brothers, but as the picture shows, one is a light sorrel with distinct Belgian marking, while the other is a dark sorrel. The boys are now hoping for a good fall of snow so that they can hitch all four sorrel mules to a pair of bobs and try their skill at driving a long-eared four-in-hand.

"Is the ——— Insurance Company a reliable concern with which to do business?"

Rather than say "yes" or "no", we prefer to give you a "left-handed" answer. The company mentioned by our reader is not licensed by the New York State Insurance Department, and according to the law, agents cannot make personal solicitations in this state. The law does allow solicitation by mail. If a policy holder gets into an argument with an unlicensed company, the State Insurance Department cannot help.

Therefore, we answer the subscriber's question with another question — "Why take any chances?" There are plenty of reliable insurance companies that are licensed by the State Department. We will even go a step further and say that our subscribers have had plenty of trouble with similar unlicensed companies.

No Road to Wealth

"I read an ad by a company that sells mushroom spawn. It indicated that there are great profits to be made from growing mushrooms. Would you advise me to try it?"

A few years ago rabbits held the spot-light as a get-rich-quick proposition. That proposition collapsed but will probably be revived as soon as a new generation grows up. Meanwhile mushrooms get the lime-light. Mushroom growing is a highly specialized business and has just as many troubles as any other farm enterprise. We are particularly skeptical of concerns that sell mushroom spawn and offer to buy back the product. If you want to try out mushroom growing on a small scale, we suggest that you buy spawn from a reliable seed company. If you

Let Us Help You

The following bulletins have been prepared by *American Agriculturist's* Home Editor, Mrs. Grace Watkins Hockett, and they are available to any reader without cost other than 3c each to cover mailing and mimeographing costs:

- ☐ No. 1—Outdoor Fireplaces. Gives clear, concise directions for building simple types of outdoor fireplaces.
- ☐ No. 2—Blankets. Tells you what to look for when buying a blanket; also, how to wash blankets and protect them from moths.
- ☐ No. 3—Apple Recipes. This bulletin contains many unusual apple recipes that will appeal to your family.
- ☐ No. 4—Protective Foods. Tells what foods help to keep you and your family in good health, and contains a week's supply of sample menus showing how easy it is to plan healthful meals.
- ☐ No. 5—School Lunches. Has lots of suggestions for keeping the children's lunch boxes filled with healthful, appetizing, easy-to-prepare lunches.
- ☐ No. 6—Home Canning and Curing of Meats. Tells how to stock your shelves with delicious, ready-to-serve, "home grown" meats. Directions are easy to follow.

How to order these bulletins: Check the ones you want, include three cents for each one desired, and return this coupon to *American Agriculturist*, Box 367-H, Ithaca, N. Y. Be sure to give your name and address, and write plainly.

can grow them and succeed in finding a market you can then go into the business on a larger scale. Do not depend on "buy back" promises!

* * *

Seller Needs Pay

"I have been selling hay to a Brooklyn dealer. I delivered in my own truck, all shipments on a C.O.D. basis. There was no trouble for a while, but recently they have been holding back payments on each load. Now they owe me nearly \$200. My driver went for the pay last week and it was refused unless we shipped more hay. I never made a contract — my terms were cash."

The practice of holding back part payment for farm produce is getting so common that it is becoming monotonous and distinctly irritating. It takes a little courage to refuse to deal with a man who has been paying satisfactorily in the past. Furthermore, the failure to pay is usually delayed until the produce is unloaded. Remedy is forceful persuasion backed by legal action if necessary.

* * *

Denied Use of Mails

For several years the Service Bureau has received many letters expressing dissatisfaction with the business dealings of seed companies located at St. Charles, Illinois. These companies advertise to furnish seed collections for 10c, but those responding were then asked to furnish 20c to cover postage, packing and handling charges. In some cases additional seeds or plants were offered to those who would send in six post cards addressed to potential customers. Many who sent these in received nothing for their money.

The Post Office Department recently issued fraud orders denying the use of the mails to several of these companies, namely, S. W. Pike, Best Gardens, Globe Seed Co., and Middle-West Supply Co. The Post Office reports that all of these concerns were operated by three brothers.

Proper care of bags can save about \$2.00 a ton on your feed bill.

Keep Bags Clean and Dry

Feed should be piled in a clean, dry place, away from nails, broken boards, or anything that might tear the bags. Open bags carefully (see illustration). A simple bag rack like the one in the picture will keep used bags out of the way where they won't be lost, soiled, or gnawed by rats.

G.L.F. Service Agencies will receive used bags, but unless they are carefully sorted they cannot pay the maximum price. You can either (1) arrange with your Service Agency to ship your bags and pay you the best possible price, based on grading and condition; or (2) ship direct to Carl Burwick & Co., authorized receivers for G.L.F. bags.

When You Ship Direct

Burwick will pay 11 cents each for No. 1-grade G.L.F. 10-ounce burlap or cotton Osnaberg bags, delivered at their plant. Present prices for other grades:

- No. 1 G.L.F. 8-oz. Burlap Feed Bags..... 4½ cents
- No. 1 10-oz. Burlap Feed Bags (not G.L.F.)..... 5½ cents
- No. 1 Cotton Feed Bags (not G.L.F.)..... 4 cents
- No. 1 Beet Pulp Bags.. 4½ cents
- No. 2 Bags priced according to condition.

Directions for shipping G.L.F.-branded bags to Carl Burwick & Co.:

1. Sort bags carefully. Throw out torn, dirty, or stained bags.
2. Put up bags in bundles of fifty with three ties of strong twine around each bundle. Wrap bundle in a damaged bag if you have one.
3. Put your name and return mail address on every shipping tag and put a shipping tag on every

bundle of bags (your Service Agency will supply shipping tags free).

4. Ship bags by local freight from your nearest freight station to Carl Burwick & Co., at Buffalo, Albany or Worcester, Massachusetts.
5. They will mail check in payment for your bags directly to you.

A. L. Bibbins reports on

SEED

The seed situation, as summarized by A. L. Bibbins, your seed hired man:

Demand: Drouth in various sections of the country causing a big seed demand for spring. Reduction of corn and grain acreage in favor of grass acreage adds to the anticipated increased demand.

Easy Way to Open a Bag: Many bags are ruined in opening. This picture shows the correct way to open a feed bag. Break the string at the right-hand edge of the bag, on the side where the thread is single. A knife, pencil, or nail will do it. If breaking the first loop doesn't free the string, the second loop will. Pull gently on the loose ends on both sides of bag and the thread will unravel.

Bags left in a pile on the floor provide a perfect nesting place for rats and mice. Hang your bags up out of harm's way on a simple bag rack. The one shown here is made of a piece of pipe hung from two ropes.

Prices: Red Clover prices only 5% to 10% higher than last year. Alfalfa prices same as last spring. Timothy up about 15%. Alsike up about 40%.

Although Timothy, Alfalfa, and Alsike are higher than last year, they are lower than most years.

Supply: Red Clover Crop—25% less than last year. Alsike—40% less than last year.

High-quality Grimm and Variegated Alfalfa 20% less than last year. High-germinating Timothy is less than last year.

Future Prices: No immediate change in sight, but likely higher before spring because of shorter supplies of desirable seed and anticipated increase in demand.

Emergency Crops: Jap Millet Crop—smallest in the History of G.L.F. Vetch Crop—small. Fair supplies of Sudan and Soybeans.

A mixture of Sudan and Soybeans makes a good emergency hay crop. Four pecks of Soybeans and 10 to 12 pounds of Sudan Grass sown per acre makes a hay that is higher in protein than straight Sudan, and easier to cure than Soybeans alone.

Changes check price
rise in flexible formula

FEEDS

Europe uses a lot of Manchurian soybeans. War hazards make it hard to ship between Asia and Europe, so this fall some of this business has come to America. Heavy exports have cut down the supply for home use. Result: soybean oil meal has become hard to get at any price.

Meanwhile supplies of coconut oil meal are plentiful, and for the first time in many years linseed oil meal is available at a favorable price.

Dairymen who feed flexible formula rations are not inconvenienced when such a situation develops.

Meeting in Buffalo, November 21, the G.L.F. dairy feed formula committee made adjustments in the flexible formula feeds which helped take the pressure off the soybean market and prevented a sharp rise in dairy feed prices.

A typical adjustment was that made in 20% Exchange Dairy:

Took out

- 100 lbs. wheat bran
- 40 lbs. hominy feed & corn meal
- 80 lbs. ground soybeans
- 140 lbs. soybean oil meal

Put in

- 100 lbs. linseed meal
- 100 lbs. coconut oil meal
- 100 lbs. corn distillers' grains
- 60 lbs. cottonseed meal

The price remains the same. Total digestible nutrients are slightly increased to 1518 lbs. per ton.

Christmas . . .

THE HOLIDAY OF HOME

by E. R. EASTMAN

I TOLD a young friend of mine recently that if I could have only one wish, I thought it would be to turn the wheels of time backward and make me a boy again at Christmas time on the old farm. Let me gather just once more about the family hearth with Father and Mother and my brothers, just as it used to be.

We did not always have a tree, but we always did hang up our stockings, in which in the morning we found an orange, a toy or two, and some bright Christmas candy. There were not many presents, *but the folks were there*, and so was love.

Those of you who because of hard times are feeling badly this year because you cannot give your friends expensive presents should remember that presents do not make Christmas—they may even spoil it. *The Spirit of Christmas is the Spirit of Love*, and if you have not made that evident to your family and to your friends during the year, then presents, no matter how many, will not do it at Christmas time.

Christmas is above all other times a Holiday of Home, the time to renew and to consecrate again the ties of family love and friendship. It is natural and right for sons and daughters to go forth from home to make their own lives, but if they could only realize, before it is too late, what home and father and mother really mean to them, and that they should never miss an opportunity to return, how much regret it would save them in after years.

Although there is no mention of Christmas in it, there is no better Christmas poem in our literature than Whittier's SNOWBOUND, because in it he pictures so well a farm family gathered together around the family hearth. In extending to you the greetings of the staff of *American Agriculturist* for a Merry Christmas and a Happy New Year, I wish for you a renewal of appreciation of your loved ones so well expressed in the selection, on this page, from SNOWBOUND:

SNOWBOUND

W

HAT matter how the night behaved?
 What matter how the north-wind raved?
 Blow high, blow low, not all its snow
 Could quench our hearth-fire's ruddy glow.
 O Time and Change! — with hair as gray
 As was my sire's that winter day,
 How strange it seems, with so much gone
 Of life and love, to still live on!
 Ah, brother! only I and thou
 Are left of all that circle now, —
 The dear home faces, whereupon
 The fitful firelight paled and shone.
 Henceforward, listen as we will,
 The voices of that hearth are still;
 Look where we may, the wide earth o'er
 Those lighted faces smile no more.
 We tread the paths their feet have worn,
 We sit beneath their orchard trees,
 We hear, like them, the hum of bees
 And rustle of the bladed corn;
 We turn the pages that they read,
 Their written words we linger o'er,
 But in the sun they cast no shade,
 No voice is heard, no sign is made,
 No step is on the conscious floor!
 Yet Love will dream, and Faith will trust,
 (Since He who knows our need is just),
 That somehow, somewhere, meet we must....

THREE GLORIOUS WEEKS

More About A.A.'s Wonderland Tour, Starting Feb. 24th

THE OTHER day one of our readers stopped in at the office to tell us that she was planning to go with us on our Western tour in February. You'll be interested in two things she said:

"One reason that I am eager to take this trip," she declared, "is because you are including Victoria and the Butchart's Gardens. I saw those gardens once years ago and they were so beautiful that I want to see them again."

Her other comment was made upon hearing the cost of the trip.

"I thought it would be at least \$100 more than that!" she exclaimed. "I don't see how you can do it so reasonably, for I know that your tours leave nothing to be wished for."

We are proud—and justly so, we feel—of our wonderful all-expense tours, because they not only give those who go on them a real vacation filled with pleasure and high interest, but they leave lasting memories of thrilling sights seen in the friendly company of A. A. folks.

When you read the following itinerary, we think you will agree with us that this is the best tour we have ever planned. In imagination as you read it, leave behind the Northeast's wintry winds, roll Westward in the gracious atmosphere of the Northern Pacific's famous "North Coast Limited", and picture to yourself one by one the marvelous sights we'll see—the spectacular, snow-crowned Rockies, beautiful West Coast cities, picturesque Victoria and its lovely gardens, famous Yosemite Park, orange groves, Hollywood, old Mexico with its flavor of the past, historic New Orleans, and many another enchanting spot:

Saturday, February 24th

Enroute aboard the New York Central's "Empire State Express". De Luxe coaches with reclining seats provided. Overnight at Hotel Cleveland. Room with bath provided.

Sunday, February 25th

Leave Cleveland at 11:32 a. m. for Chicago. Lunch in dining car, dinner in Union Station, Chicago, and then at 9 p. m. we board our Pullmans on the "North Coast Limited". The next two days give us a daylight ride through Minnesota and North Dakota, through the mighty Rockies, across the Continental Divide, and gives us a good view of Butte, one of America's most picturesque mining towns.

All meals in the dining car—meals famous the world over for their excellence, variety, and generous servings.

Wednesday, February 28th

Arrive Seattle, Wash., 7:50 a. m. Breakfast in dining car. Transfer to the Olympic Hotel, and then about 10:00 a. m., we will take a de luxe motor tour of this beautiful city. Other meals at hotel, and afternoon free to do as you please.

Thursday, February 29th

After a leisurely breakfast at hotel,

we will get aboard a luxurious steamer of the Canadian Pacific line and steam across Puget Sound to Victoria, B. C. On arrival there, a motor trip will be taken of this quaint old English city, visiting the famous Butchart's Gardens (beautiful at this season with a mass of spring flowers). We'll also see the lovely Saanich Peninsula, returning via Elk Lake, Bird Sanctuary and the Government Game Farm.

hotel. Leave that night by sleeper for Los Angeles.

Thursday, March 7 and Fri., March 8

We will spend two whole days in this lovely city, whose summer sunshine will make you "feel like a million". There will be de luxe motor trips on which we will see Hollywood (and have lunch with the movie stars); Beverly Hills, beautiful Pasadena, the world-renowned Huntington Library, Busch's Sunken Gardens, Orange Grove Avenue, and other famous places. Hotel Clark will be our home.

Saturday, March 9th

Leave Los Angeles for San Diego, arriving there at noon. Here is a city noted for its perfect climate. On a three-hour tour, we will see Balboa Park, the Mission Hills residential section, the Marine base and Naval Training Station, and famous Point Loma with its old Spanish lighthouse. Dinner and overnight at the beautiful Del Coronado Beach Hotel. There will be ample time to roam through

the Rio Grande into Juarez, Mexico. Most of the houses here are constructed of adobe and covered with bright plaster. Along the walks are rows of rickety shops where you can buy all kinds of unusual souvenirs. Near the market place is one of the oldest structures in Mexico, the mission "Our Lady of Guadalupe," begun in 1659.

Thursday, March 14th

On this day we will be speeding through Texas, passing over the Pecos River Bridge (highest in the world at one time), and later passing Uvalde, home of Vice-President Garner.

Friday, March 15th

Arrive New Orleans and transfer to our hotel for breakfast. Then we leave by motor to see America's most interesting city—the city of many moods. We'll see modern New Orleans, and later the old, historic city. After having explained to us this part of the city, dating back to the beginning of American history, we will make a tour of the river section, plan-

Dinner on boat, and back in Seattle at 9 p. m. Overnight at our hotel.

Friday, March 1st

Leave Seattle at 10 a. m. for a delightful motor drive to Tacoma, Washington, passing enroute through the great berry section of Puyallup Valley, famous for its fine raspberries, blackberries, vegetable and flower farms. That afternoon, we will go by train to Portland, Oregon, have dinner there, and leave by sleeper for San Francisco, California.

Saturday, March 2nd

Enroute through scenic Sacramento River Canyon. All meals in dining car. Arrive San Francisco at 6:50 p. m. Transfer to Whitcomb Hotel.

Sunday, March 3-Monday, March 4

Sunday morning will be free to attend church or to do as you please. That afternoon we will take a 30-mile de luxe sightseeing tour of the city. Sunday evening open. All meals at our hotel.

Monday morning we will take a motor trip to Berkeley, Oakland and University of California, viewing the scenic panoramas from Oakland Skyline Drive—returning over the new San Francisco-Oakland Bay bridge. Meals at hotel. Afternoon free. That evening we board our Pullmans and are off on one of the most exciting parts of our trip—a visit to Yosemite.

Tuesday, March 5th

Arrive at Merced, have breakfast in Hotel Merced, and then we are on our way to see the breath-taking beauty of this famous national park. Passing El Capitan, a granite monolith 3,604 feet high, we reach Yosemite Valley at 11 a. m. The beautiful Ahwahnee Hotel will be our home. In the afternoon, we will take a two-hour motor tour of the Floor of the Valley.

Wednesday, March 6th

Motor trip to and through the Mariposa Grove of Big Trees. We'll see "Wawona", the "tunnel tree". More than 600 giant sequoias have been growing here for centuries—the earth's oldest and largest trees. Meals at

the beautiful flowered patio, rest on the broad veranda overlooking the ocean, or take a dip in pool or surf.

Sunday, March 10 and Mon. March 11

Sunday morning free. Then back to Los Angeles for a scenic motor trip (Monday a. m.) to Riverside, through the great orange grove section, stopping at one of the large orange packing plants, and finally reaching Mission Inn, one of the most famous hotels in the world. Guests from all over the world visit this historic Inn, renowned for its architectural beauty, priceless collection of art treasures, and the finest meals that money can buy. We will be there from Monday noon until Tuesday a. m.

Tuesday, March 12th

Aboard the Southern Pacific Railroad, and enroute to El Paso, Texas. We'll go through the deep green San Bernardino Valley—acres and acres of orange groves framed by mountain scenery. We'll see the Date Palm Orchards, Coachella Valley, travel for forty miles along the shore of the Salton Sea; and go through the Imperial Valley, which irrigation has transformed from a flaming desert into a winter garden.

Wednesday, March 13th

Arrive El Paso at 8:50 a. m. Our special Pullmans will be held here for a day while we tour the city and cross

Corner of the Ahwahnee Hotel, our home during our stop at Yosemite National Park, with Yosemite Falls in the background.

tation homes and levees, the old French market, U. S. Mint, and the field where the battle of New Orleans was fought. Meals and overnight at our hotel.

Saturday, March 16-Sunday, Mar. 17

Enroute to Cleveland, Ohio. We will spend Sunday night there, at Hotel Cleveland.

Monday, March 18th

Back to our starting point, arriving at Buffalo at 1:20 p. m., with later stops at Rochester, Syracuse, Utica, Albany and New York. You will find it hard to say goodbye to good friends you made on the trip.

A well-illustrated folder is being prepared which gives further details of this grand trip. Write for it today, using the blank below. And if you think you can possibly go with us, make your reservation soon. Remember that if anything happens later to prevent your taking the trip, we will refund all payments.

What the Cost Includes

1. Round-trip railroad ticket from city where tour is joined.
2. Pullman accommodation where called for in the itinerary.
3. All sight-seeing mentioned in itinerary.
4. Hotels and over-night stops.
5. All necessary tips.
6. All meals.

In addition, the tour will be personally conducted by an experienced escort, which will relieve all members of the party of the many details encountered when traveling alone.

The cost of the trip, depending on where you live, will be approximately \$325.00.

Mr. E. R. Eastman, Editor
American Agriculturist,
Ithaca, N. Y.

Please send me, without any obligation on my part, your illustrated folder giving full details of your Western Wonderland Tour, including exact cost of your "all-expense" ticket.

SANTA is a FARMER

By JACK WALLACE SPAVEN

MORE THAN 10 million Christmas trees from the forests of Washington and Oregon, the bogs and swamplands of Minnesota, the snow-covered mountains of New England and New York and the wooded areas of the West, are on their way toward the nation's cities. These trees, which range from foot-high table trees to green giants for city parks, were shipped by truck and train as early as December 1. They were ordered early last summer when most of us were buying fireworks and Christmas was far from our minds. In September, axemen and farmers started into the woods to select and cut the best symmetrical, short-jointed, stocky evergreens that grew. After they were cut the trees were stored in the shade of the forest and covered with freshly cut boughs to protect them from the sun

harvest of trees for the holiday trade that New Hampshire and Vermont farmers have formed a cooperative to market their trees. For the last 30 years the harvest of Christmas trees has brought millions of dollars to the farmers of these two states. For many years these Yankee farmers did little more than grow the trees on their lands. Outside buyers sent in crews to cut and market the crop. As a re-

Thousands of Christmas trees on their way from Santa's farms to bring holiday cheer to homes the nation over.

(Right): The truck is loaded to capacity with the farmer's biggest Christmas crop, evergreens. The season's sale of trees will bring this farmer a tidy income.

and keep them green and fresh until the marketing season arrived. Then they were tied into bundles, all roughly the same size, and containing from one large tree to ten small ones. Trucks brought them to the nearest shipping point where they were again piled up to await freight cars and long distance trucks.

The harvest of Christmas trees today is a far cry from that December day back eighty-odd years ago when Woodsman Mark Carr sold his first supply of Christmas trees, carted down by oxen from the Catskills to a little market on Vesey street in New York city.

This year's cutting and marketing 10 million trees has provided employment for thousands and will bring in a revenue amounting to over five million dollars.

Just as the city-dweller's Thanksgiving turkey came from the farmyard, so will his Christmas tree come from the farm woodlot, for the biggest percentage of the ten million trees were harvested on the farm.

The Christmas tree industry is an extremely important one to our farmers for it fills a gap in the year when employment is usually slack in all other lines of farm work. It also brings added money to the farmer at a time when money is most needed, for Christmas and tax paying time arrive together.

So important a farm business is the

sult the farmers received a pitifully small return for their product. Like all good Yankees, these farmers soon saw the great possibilities of a cooperative arrangement which would allow them to do the cutting and marketing and bring in added profit. About ten years ago farmers in Coos county, New Hampshire and Essex county, Vermont met to form a cooperative known as the Forest Products Association. From a small beginning of several farmers this cooperative has grown so that now over a hundred are cutting and marketing their trees through the cooperative. This year well over a million trees will be shipped from New Hampshire and Vermont to markets as far south as New Orleans.

The cooperative allocates its shipments according to regional preferences — the balsam fir trees go to nearby eastern markets, and the spruce trees are shipped to the Middle West and South.

The grading of products has long been in practice in the agricultural field and was initiated in the marketing of Christmas trees three years ago by the Forest Products Association under the guidance of the New Hampshire Extension Service. The trees are sold under two grades; fancy and standard. The fancy grade requirements are that the tree be well formed and that each set of limbs have branches on all four sides, or the equivalent, number of limbs equally well distributed. The foliage must be full and of good color.

The standard grade requirements are for fairly well formed trees with an allowance of one limb missing on 50 per cent of the trees so graded.

The trees are tagged with a bright red tag for fancy grade and a blue tag for standard grade. On each of the trees, bundled together with bright red string, is the tag, which reads: "This tree was cut from the mountain pastures in northern New Hampshire or Vermont where the trees are encroaching on the grasslands needed by the farmer for his dairy herd, and therefore, its cutting was not destructive to forests. The cutting and marketing has been done cooperatively, farmers working together as good neighbors. They wish you a Merry Christmas."

These graded and tagged trees have been well received on the wholesale and retail markets and at the present time the cooperative is unable to meet the demand for these high grade trees.

The co-op has found that dealers are perfectly willing to pay a better price for the trees provided they can be assured of a better quality tree.

As a result of the aggressive marketing program these cooperative farmers are now building up their supply of trees so that future Christmas tree harvests will be as great as they are now. Land owners are putting in plantations of balsam fir and are start-

(Below): The farmer-members of the New Hampshire-Vermont cooperative bundle their trees according to size and grade. Each bundle is tied with bright red cord and carries a Christmas greeting to the buyer.

ing a program of improving natural growth by trimming and pruning the trees so as to develop proper shape and symmetry.

In several other states farmers have experimented at cooperative marketing of Christmas trees. These ventures are expected to grow, for in all instances the cutting and marketing of Christmas trees is an undertaking which most properly involves cooperation — a cooperation which will provide trees for future generations and assure our children and our children's children of beautiful forested lands such as we enjoy today.

Plantations of Christmas trees are coming to be more and more recognized as good farm crops, not only in New England, but in all rural sections of the country where Christmas trees can be grown. While the trees are growing they bind the soil with their roots and shield it from hard, beating rain.

Generally, Christmas trees used to control erosion are planted fairly close together. When they reach the right size for ornamental use, the farmer makes a tidy little profit by cutting a few trees every year without weakening the stand or reducing its value as a means of erosion control.

Let those who shed tears about the

When Farmers Take Over Chicago

A Visit to the International Livestock Show and the Annual AFBF Meeting

ALTHOUGH Chicago is the second city in size in America, it is just a big farm town during the first week in December. In fact, it is very much closer to agriculture all the time than is New York City. During this first week in December, Chicago is not only the scene of what is probably the greatest Livestock Show in the world, but to the Big Town come thousands of boys and girls of the 4-H and Young Farmers' Clubs. The American Farm Bureau Federation held its annual meeting there this year, as did also the American Society of Agricultural Engineers, and many other smaller groups.

The World's Finest Farm Animals

If you love a beautiful farm animal—and what good farmer does not—I wish you might have been with Carl Ladd, Dean of the New York State College of Agriculture, Frank Smith, farmer and breeder of Springfield Center, New York, and myself last week when we visited the great International Livestock Show at Chicago. Never before have I seen so many beef cattle, horses, sheep and swine gathered in one place, where every single individual was a top notcher.

The Show was doubly interesting to Carl and me because no one of our experience knows his beef animals better than Frank, who has spent a lifetime raising them. As we walked up and down the long rows of animals, every one in the pink of show condition, it was not hard to see in imagination the hills and valleys, the plains, the farms and ranches, all over the United States and Canada, from whence these animals came. To mind came the old Biblical phrase: "The cattle on a thousand hills."

There is a kind of a feeling, hard to express, that one gets in looking at purebred cattle, and especially sheep, that takes one back across a thousand years with ancestors who worked with and loved farm animals. Perhaps it is best described by the word pastoral. That feeling was very much with me when I looked at so many splendid animals at the International Livestock Show.

It was not hard, either, to understand the pride that comes from ownership of beautiful animals, a pride which is building into the boys and girls of the farms of America a love of farming and a love of things that are real.

In fact, the greatest value of a Livestock Show is what it does for boys and girls of the 4-H and Young Farmers' Clubs, many of whom have animals on exhibit. What an achievement for a young man or woman to win a prize in a Livestock Show competing with thousands from both the United States and Canada.

Many of the hundreds of boys and girls of the 4-H Clubs and Young Farmers' Clubs who visited Chicago won the trip as a prize for achievement in farming in their own states. What an education for these youngsters to meet other boys and girls from every state in the Union, all interested in achieving in mankind's fundamental occupation, that of farming!

The International Harvester Company's great

~~~~~  
**Merry Christmas and A Happy New Year**  
 ~~~~~

luncheon to these young men and women is a noteworthy event, one which the boys and girls will not soon forget.

Railroads Ask Fair Treatment

To Chicago during this farm week also come editors and publishers of farm papers to see the livestock, attend the Farm Bureau Federation meetings, and to discuss mutual editorial and publishing problems with one another.

Speaking briefly on the problem of the railroads at luncheon given by the Association of American Railroads to Farm Editors, Colonel Robert S. Henry pointed out that the farmers and the railroads have much in common; each needs the other. "You grow the products; we haul them," said Colonel Henry. "We ask for no special consideration, no special legislation. But we do ask," said the speaker, "that all transportation be placed on the same fair basis. If, for example, we must be taxed heavily, then competing forms of transportation should be equally taxed."

Is AFBF on Right Track?

One reason why I took two or three days in a busy time to go to Chicago was to attend the annual meeting of the American Farm Bureau Federation. Gathered in the great ballroom of one of Chicago's big hotels were some 2500 farm folks, representing the Farm Bureaus from most of the states of the Union. (See Skeff's comments on page 7 and Doc Roberts' observations on page 17.) No one could look into the faces of such a great representative audience of America's finest people without being inspired. But I must confess to some disappointment in the program and policies of the AFBF. It is a broad, well-accepted truth in America that a farm organization begins to slip when it becomes politically-minded. It may ride high and do a good job when the Administration which it favors is in, but when the Administration changes, what happens to the farm organization which has supported it? The lesson of history is that a partisan farm organization cannot succeed on a permanent basis.

Some of the leadership of the AFBF is definitely New Deal. It would be just as bad were it definitely Republican. It should be independent. This criticism most emphatically does not apply to the State Farm Bureau Federations in the Northeastern States nor to the northeastern representatives in the AFBF. These state organizations are completely non-partisan and are doing a splendid job.

Most of the speakers on the AFBF were New Dealers. Secretary Wallace emphasized the same old farm program that he has from the beginning, some of which is good, and some of it experience has proved to be disastrous.

Unfair to Farmers

Secretary of State Hull devoted most of his speech to an attempt to prove that the reciprocal trade agreements with other nations were good for the American farmer. Now, I personally think that Secretary Hull is one of the most sincere and one of the ablest men in Washington, and I think that he has some argument when he states that reciprocal trade agreements are one way to bring about peaceful and better relations between America and other nations. And God knows that we need peace above everything else in this world! But I still must say that it is unfair and in the long run unwise to pick on the American farmer with these trade agreements, and that is exactly what they are doing in many instances.

The agreement with Canada let down the bars for some imports of competing Canadian farm products. Especially is this the case with the proposed treaty with the Argentine Republic, a nation which exports very little except farm products, most of which we grow right here in the United States. What kind of a policy is it, then, where one member of the Cabinet launches scheme after scheme to control and cut down the production of American farm products, when another Cabinet member at the same time is making trade agreements with other countries to let in more and more of the same products. I am glad to say that the AFBF named a strong resolution against a trade agreement with Argentina.

Farmer Folks Same Everywhere

The best I always get from great meetings and conferences is not from the program itself, too often filled with dull speeches, but rather from watching the folks themselves from the sidelines. In the big dining room of the hotel one morning during the AFBF meeting, members of the Farm Bureau delegation from one of the Midwest states were having breakfast together, probably at least a hundred of them. And were they having a good time, cracking jokes, laughing loud and long, and singing. One of my breakfast companions, after listening a few moments, said:

"I grew up with these folks out here in the Midwest, and I have got to say that one of their characteristics is to yell the loudest when things are going well, and cry the most when they are going the other way."

Well, I don't know about that. I do know that the good farmers of the Midwest have since pioneer days been the first to run to the Government for help. But maybe our Northeastern folks here would do that also if we were in equal distress. There is no doubt that with droughts, dust storms, grasshoppers and low prices, thousands of Midwest farmers, particularly the one-crop men, have faced despair, and we all tend to become radicals and palace-hunters when we get hungry or when we see our families suffering.

One thing I do know, and I thought of it many times on this trip. There are no better folks in the world than farm folks, and it doesn't seem to matter much whether they come up from the plains, with their big broad-brimmed hats, whether they come in from the golden shores of California, from the prairies, the South or from our good Northeast, they have the same look of character and dependability that comes from association with the land and with that which grows upon it.

Eastman's Chestnut

UNCLE Will Rockefeller, Mrs. Eastman's uncle, and a distant relative of John D., used to tell this good one on himself.

He lived in Toledo, Ohio, not far from John D.'s home at Cleveland. One time he was on his way to the Toledo Country Club, and as he was turning into the Club's driveway another car crashed into his head-on. Uncle Will went into the ditch, and naturally was badly shaken up and dazed by the accident. A passerby ran up, pulled him out, and asked him who he was and where he wanted to be taken, to which Uncle Will answered:

"I'm Rockefeller. Take me into the Club."

Whereupon the stranger remarked disgustedly to the circle of onlookers who had gathered around:

"Huh! Claims he's Rockefeller! Drunker than a little lord!"

Pigs, Pork and Prices

BY ROMEYN BERRY

OUR LAST year's pork has worked down to three chunks of salt meat and one strip of bacon. We're not worried about pork, however, because we know that any day now that it's cold enough — and with prospects of staying cold for awhile — we can have all the meat we need to last us through the present winter and well into the next one.

Only last Sunday my wife, Elmer, Mr. Updike and myself leaned our elbows on the fence and discussed the pork supply at some length. We also scratched her back with a piece of broken hoe handle and fed her a few nubby ears of corn. Her name is Berengaria; and Mr. Updike, who isn't apt to go far wrong on a thing like that, thinks she'll dress out better than 380 and that her hams (cut generous) will not run much under 40 pounds apiece.

It seems a heartless thing to lean your elbows on the fence and speculate on how much a ham will weigh, when that same ham is still propelling a two-year-old hog around the pig run in her groaning, discontented search for more corn nubbins. But that is one of our more interesting occupations on Sunday in these short December afternoons.

This year we're trying a new way with pork. We're letting it grow up instead of killing it young the way Mr. Knight, the butcher, wants it. That's all right when the chief demand is for fresh pork, but both Elmer and Mr. Updike have convinced me that when you are putting down pork for your own use, it's better to let it grow up first. That's why Berengaria is now upwards of two years old and weighs around a quarter of a ton, when all her brothers and sisters went to Mr. Knight way back in 1938. That is also why we figure on using the hay rope and pulleys this year when the time comes, instead of doing the job entirely by hand. We shall have to use the iron cauldron too. There isn't a barrel on this farm big enough to take the half of Berengaria. We've proved that with a piece of string. It's no time to find out the barrel isn't big enough to take the hog after you've got the water hot.

One of these days when Mr. Ed Babcock gets his quick-freezing and zero storage perfected down at Sunnygables, it will be possible to kill meat any time and have it fresh the year around and to turn the smoke house

"— A warm kitchen, fragrant with the smells of sausages, coffee and buckwheat cakes."

to some other useful purpose. But when that happens a certain amount of fun will go out of small-scale family farming. I'll miss all this Sunday afternoon argument about the best way of smoking hams and seasoning sausages and how much saltpeter to put in the pickling brine. Not that I don't think there isn't a good deal of bosh talked about it. I don't believe that any man, who has lived eighty years and chewed tobacco 16 hours a day through sixty-eight of them, has enough taste left to tell whether a ham has been smoked with apple wood, hickory or just plain cobs, without seeing it done. And did you ever notice how anxious men are to give you their recipe for sausage seasoning out of whom you couldn't pry a nickel for foreign missions?

This year we are going to do things somewhat differently. We're going to smoke more meat and salt less; we're going to can a good half of the sausage and not run chances of keeping it fresh through the warm days of March. We're going to make scrapple this year and keep the big hams, butts and shoulders in pickle until we're nearly ready for them, and then smoke them one or two at a time in a barrel. We don't entirely trust our smoke house any more. It's too easy for birds and mice—and a man named Sam—to get into.

We are making scrapple this year because we all like scrapple and like it made with more scrap—not so much just corn meal mush seasoned up. We're also smoking the hocks to cook with dried sweet apples.

Another thing we're going to try this year is parboiling the sliced ham in cider before frying it. Hams the size of Berengaria's will have to be cured pretty strong in order to keep, and will require quite a little freshening. And the man says nobody knows what ham is until he's had it parboiled in cider. We don't know, of course, but we propose to find out. There are plenty of other ways to cook ham that involve no experimentation—demonstrated ways calculated to flood the tonsils of any man or woman who ever lived on a farm as a child and can remember the smells that came wafting up through

the hall on a cold morning from a warm kitchen, fragrant with the smells of sausages, coffee and buckwheat cakes—or ham and eggs—or the combined bouquet of bacon and wood smoke.

It is the first essential of successful

Wherever We Go From Here— Let's Go!

By ED. W. MITCHELL

APPLE Growers have certainly demonstrated their ability and capacity to provide enough apples for everyone in this country to have all he wants—and still have some left over. Now it is up to them to find some profitable way to dispose of those leftovers. Every other industry has increased its efficiency to this same point, and most of them have survived only as they solved this same problem of surplus.

An all-wise and paternalistic government has thrown us a life preserver, but it hangs by a very slender thread and we are still in the soup. It is not a permanent answer to the problem; we must find that.

The advertising and sale of citrus pulp for cow feed in my home town where thousands of tons of apples and apple pomace are going to waste, spurs in me a desire to find some way to use apples for that same purpose. Farmers buy molasses and phosphoric acid to mix with grass silage to bring up the acid content enough to preserve the grass; mixing apples or apple pomace with the silage should be tried as a replacement for those and as an addition to food value and palatability.

Citrus pulp and beet pulp are recognized as good cow feed. What about dried apple pomace for similar use? I know the cows go for it when they have a chance and when we do not want them to get it, and they apparently like it well enough to make themselves sick eating too much.

Far be it from me to promote the

You leave us silently tonight,
Beneath the stars that glitter bright;
You who so long have been our friend,
And soon that friendship is to end.

So many a trouble, did you share,
So many a smile, so many a tear;
So much of grief and joy you brought,
So much of life and love you taught.

And now that parting is so near:
What did we give to you, Old Year?

family farming, I suspect, for the family to like pork. Folks who don't like pork ought to go into some other business—all kinds of pork from spare ribs through ham and eggs, hocks and cabbage, beans and boiled bacon, to sausages and buckwheat cakes. We like them all.

Some years hogs command a good price and it pays to raise them. Other years—more perhaps—the price that Mr. Knight can give us sounds pretty disappointing. In the bad years we're low in our minds when we hear the price, but only for a little while. We'd prefer, of course, to have pork so expensive that we couldn't afford to keep any for our own use. But even when the price runs to the other extreme, we can still work ourselves into a fairly cheerful mood by remembering that we can now have plenty of pork ourselves—by recalling how it feels to crunch up from the barn in the dark of a zero morning, to see the warm light in the kitchen window, and to catch the comforting fragrance of sizzling sausages.

use of apple brandy, though that outlet surely perked up the cider market during prohibition times. I doubt its return because of cost and public preference for other beverages, but the soft drink field looks inviting.

The American public spends millions of dollars every year for soft drinks. Many of these are little more than sweetened water with color and flavor added. Surely apple cider with fruit sugars, minerals, vitamins, and calories, and whatever else there is in an apple, should make it a preferred drink at soda fountains. If the apple growers can break into that happy hunting ground we ought to be able to bring home some bacon.

This winter will find us holding our usual meetings and "talk-fests". These should be devoted more to developing distribution and sales and by-products than to production problems. If we get much better at production, apples will be too plentiful and cheap for even the most favored growers to show a profit. Only the waste due to insects and disease, and the discarding of varieties has kept the supply of commercial apples down to a volume that the trade will absorb during these last few years. Until demand picks up, efforts at increased production should be discouraged, and less fruit, but of better quality, should be our aim.

Most of the apple growers have the income side of the budget down to about nothing. Now if we can only get the outgo side down to that we will have a balanced budget and can start from scratch again.

Merry
Christmas

On a Three-Legged Stool

By FRANK E. GANNETT

EDITOR'S NOTE: The article on this page is the conclusion of an address given by Mr. Gannett recently in the City of Brooklyn. It is such an interesting, vivid and accurate statement on the problems of farmers and of the nation that we secured Mr. Gannett's permission to republish it here. When you read this think of the service Mr. Gannett is rendering farmers by telling thousands of city folks the facts about agriculture.

WHY DO I come to Brooklyn, the City of Churches, to discuss the farm problem? What does it mean to you?

Just before I came here, a student of agriculture at Cornell University, whose father and grandfather were New York State dairy farmers, said to me: "Can't you get those New York people to see that they all sit just as we do when we milk our cows—on a three-legged stool? One leg is business; one, labor; one, agriculture. The agricultural leg has been cut short by more than one-third since 1929."

That young man is right. The nation cannot sit up straight until the three legs are restored to equal length. Shall it be by shortening the business and labor legs, or by restoring the farm leg—that is, by restoring farm prices and income to normal?

Let me give you a few facts. In 1932, New York farm prices were little less than half those received from 1924 to 1929. They are still about 25 per cent less.

The price of milk, which provides about one-half of the farm income of the state, fell from \$2.64 per hundred to \$1.31, and has averaged only about \$1.79 during the last eight years.

Family Income Down \$600

For New York State agriculture as a whole, the annual average gross income fell from 411 million dollars to 223 millions. It has averaged for eight years, including some government payments, only 306 million dollars—an annual shortage of 105 millions, or about 600 dollars per farm family.

There are 177 thousand farmers on 18 million acres of New York farm land. Their total lost income since 1930 has been 946 million dollars! I repeat, \$600 a year per farm family.

What would it have meant in increased prosperity for the state, for the merchants, and local industries of your city and for national employment, if New York farmers' income had been at normal levels? What would it have meant in political stability if they had received their cost of production and a moderate profit on their in-

vestment in land and buildings of one and one-third billion dollars?

Let us now look at the national farm picture. In the last nine years, the farmers of the United States lost 35 billion dollars of their normal income. Producers of other basic commodities lost 15 billions more, making a total destruction of income and buying power of 50 billion dollars. Think of it!—the loss in this 9-year period was more than our total national debt. What an unjust blow to our farmers and other basic producers!

Farmers Get Only 10% of National Income

Our farmers feed, clothe and educate 31 per cent of the youth of the nation. Farmers have an investment of 50 billions of capital, they contribute the unpaid labor of 22 million farm women and children, they comprise 26% of the gainfully employed—yet they receive only 10 per cent of the national income.

And what does the farmer and his hired man get for all this? Only \$1.30 per day of cash. How can they be a market for goods? One dollar and thirty cents a day! That's why farmers aren't buying city goods and that's one cause for city unemployment.

What makes me burn with indigna-

tion is that other countries have long since surmounted this monetary depression and restored their farmers' prices while we ignore their experience. I visited South America and Europe to see how they did it and to learn from their experience what we could apply to our own problems.

English Farmers Get 30% More

Great Britain, wisest nation in the world on monetary matters, and twenty other raw material producing nations which base their money on the English pound, put their best minds to work in the MacMillan Committee and in the Ottawa Conference of 1932. They recognized the monetary cause of the depression. Instead of restricting farm production, they helped their farmers by correcting their monetary policy. These countries have succeeded in raising their agricultural prices to far more profitable levels. For years they have been receiving in their currencies an average of 30 per cent higher prices than American farmers have received in dollars for the same products, and now they get 49 per cent more. Restored farm prices lifted the depression in those countries.

The sterling area nations have had higher business activity, better profits, two to four times as much building activity, and 1/40th the budget deficit of the United States. The recovery policy which brought about these results was formulated largely by representatives of agricultural, mining and raw material producing groups—not

(Continued on Page 13)

SULLIVAN County, N. Y., is a beautiful area. Towering hills covered with green forests, swift running brooks, and a spattering of small lakes make it a summer haven for New York's heat-blistered population.

From a strictly agricultural point of view, it is less favored. Much of the county is at an elevation of around 1500 ft., the soil is plentifully supplied with rocks, and much of the farm land is set pretty well on edge. But don't conclude from that that there are no good farms in Sullivan County. If you are still doubtful, stop in some day and see Dewey Carr's farm at Ferndale. It was here on an October day last fall that I walked over the best piece of new seeding I have seen this year, and in an area badly hit by the drought.

Dewey Carr is a grass and hay enthusiast. Says he:

"For a number of years I proceeded on the theory of growing summer green feed on cultivated fields and carting it to the cows. I made a lot of milk with that system too; but I finally concluded that I was on the wrong track, so I made a right-about-face and now the cows do their own harvesting during the summer.

"Come on out back of the barn", he said. "I want to show you some grass."

We strolled out to a four-acre field seeded to Cornell pasture mixture, to which had been added some Svalof Victoria Perennial Rye Grass. The seed mixture for half the field contained Kent wild white clover; the other half, Birdsfoot Trefoil. To the casual observer the Birdsfoot Trefoil is not too evident, but a careful examination shows a plentiful scattering of these plants. Remembering that this is a plant that establishes itself slowly and that under favorable conditions one plant will cover a square yard of ground, we are justified in predicting that this valuable and relatively new plant will run out most of the other grass in the area in a few years. This area is planned for a permanent pasture.

"Next year", said Mr. Carr, "I am planning to mow this field about June 1 and put the grass into the silo. Later in the summer, when the permanent

pasture is a bit dry, the cows will be turned in here, and I am expecting they will find plenty to eat."

"Do you grow any corn silage?" I asked.

"No", he replied. "It can be grown in this area, but I am retailing milk and find that the labor of growing corn comes at a bad time. For years I had no silo, and the one I have now was put up primarily for grass silage."

"How do you manage your new seeding?" was the next question.

To answer this, Mr. Carr took me to an adjoining field of ten acres. Last year a hay crop was cut here. A year ago in the fall it was plowed, harrowed thoroughly (and I mean thoroughly), and sowed to oats and seeded last

spring. The oat crop on the ten acres yielded 425 bushels. The grass and clover promise an abundant hay crop next season.

Mr. Carr cuts his hay early. He is quite ready to agree that it is easier to put up hay in July than it is in June, but he is willing to take the extra trouble of early cutting. A few years ago he had an interesting demonstration of the value of early-cut hay with its high protein content. More or less by accident, a high-producing cow was fed a fitting ration containing about 13 per cent protein rather than the 20 per cent feed she had been getting. To Mr. Carr's surprise, her production increased. He began to experiment, and after satisfying himself that 12 or 13

Gone to Grass

By H. L. COSLINE

The four-acre pasture in which Dewey Carr is standing has been improved by plowing and seeding until it supports three cows per acre for six months of the year. He is pointing to a ten-acre permanent pasture which has also been improved by the use of superphosphate.

per cent grain ration had sufficient protein to match his early-cut hay, he put the whole herd on the low protein grain and has fed it ever since.

Milk from the Carr farm is sold at retail. Being a vacation country, the business is naturally larger in the summer when Mr. Carr will deliver as high as 2,000 quarts a day. He buys milk to handle some of this trade, but even in the summer his regular customers get milk from his own Guernsey herd. During the winter he delivers about 400 quarts a day.

Mr. Carr can remember the time, some thirty years ago, when the entire hay crop on the original farm of 40 acres was 16 loads. At that time the dairy herd was small, yet some hay had to be purchased to carry it through the winter. Since then an adjoining farm has been added and improved, and in a good year Mr. Carr will cut as high as 100 tons of hay. He has an ambition to have 25 acres of pasture good enough to carry 100 head of cows.

This brings up another problem—namely, pasture management. Mr. Carr has quite an area of permanent pasture that is too rough to cultivate. He has added superphosphate to this until it is mighty good pasture, although not to be compared to that he has plowed and seeded. However, to get the most good from real pasture, it is necessary to keep it grazed, usually by changing cows from one field to another, and to mow it if the grass gets too tall.

The program Mr. Carr has followed in growing grass and hay is by no means complicated. Years ago he brought into the county the first full carload of superphosphate that was ever used there, and the results were so good that he has continued to use it since that time. The addition of lime to most Sullivan County farms is equally important, and tons and tons of lime have been spread on these fields. Also, as the herd increased, there was more farm manure, balanced by adding superphosphate, to put back on the land.

In addition to fertility, the use of good seed, cutting hay early, and feeding it to good cows is Mr. Carr's program in a nutshell.

A.F.B.F. Endorses AAA Farm Program

By L. B. SKEFFINGTON

THE CHICAGO convention of the American Farm Bureau Federation lined up completely behind the AAA program, including crop control, and reiterated its stand for raising agricultural income to parity with other groups.

All officers were re-elected unanimously, so that Edward A. O'Neal of Alabama continues as the Farm Bureau leader. Herbert P. King of New York and George M. Putnam of New Hampshire were reelected directors. The federation in its resolutions expressed some disappointment that farm income has not been raised to parity by the AAA program, but voted "uncompromising support to the broad principles of that program."

It likewise declared that "control of production has not been rigid enough to raise market prices to parity levels, although it has kept them considerably above the levels to which they would otherwise have fallen."

The federation authorized its directors to insist upon adequate appropriations from the treasury for the farm program and to support, if necessary, "such tax measures as may appear to be most feasible and most effective in raising the required revenue." This is believed to leave the way open for the directors to approve processing taxes or some other means to finance the farm program.

Keep Farm Credit Cooperative

The federation asked for continuance of the co-operative features of farm credit. It recommended that farm credit and commodity programs be administered by two independent boards "operating within or properly correlated with the Department of Agriculture."

It approved the principles of reciprocal trade treaties and said research had found they were helpful, but complained that the pending treaties with Argentina, Chile and Uruguay would open the doors to large amounts of foreign farm products. As safeguards, it proposed that trade agreements be subject to approval of the secretaries of state, commerce and agriculture, instead of by the secretary of state alone.

The New Deal production control and benefit payment program was defended by President O'Neal, although he admitted it had not succeeded in raising farm income to parity.

O'Neal defined "parity" as the balance of prices existing in 1913. He then pointed out that in July 1939 the index showed farmers received 88 per cent of parity for their products, paid 119 for the goods and services they must buy, and that the index of non-farm wages was 249.

He advocated that "the surest way to give this country a national income of 90 billion dollars is to raise agriculture's income to somewhere between 12 and 14 billions." He said farmers intend to fight for enough money to carry on the farm program. At the same time he warned that the adjustment program must be self-supporting. He would support it by levying a general sales tax on manufactured goods.

Vigorous defense of the farm program likewise was made by Secretary Wallace, but his idea of making it self-supporting was by a processing tax, a certificate plan, use of all customs receipts, or a combination of several plans. Wallace voiced the thought that Congress may not continually provide funds direct from the treasury for parity payments. He proposed that a tax might be levied to provide payments for cotton, wheat, tobacco and rice. He did not include corn, because previously the processing tax had failed to work on the corn-hog combination except to the disadvantage of the farmer.

Wallace apparently feared some objection from the Corn Belt at its being left out of any such scheme, but intimated something else might be found to satisfy it.

Secretary of State Cordell Hull addressed the annual dinner and devoted all of his time to defending reciprocal trade treaties. Senator Arthur Capper of Kansas ridiculed the trade agreements as being of no benefit to agriculture and urged that the American market be kept for the American farmer up to the limit of his ability to supply it.

New York State had an important part in the convention because this was the 20th birthday meeting, commemorating the birth of the American Farm Bureau Federation in 1919. Appearing on the program to review the origin and history of the federation was L. R. Simons, state extension director. Dean Carl E. Ladd of the agricultural and home economics colleges brought greetings of the land-grant colleges. New York Secretary E. S. Foster reported that his state now ranks second in Farm Bureau membership, being outranked only by Illinois. New York's membership is at an all-time high.

It appears likely that the federation will hold its 1940 convention in New York City. Baltimore and Atlantic City also extended invitations. The matter was left to the directors.

Large delegations turned up from several Northeastern states. A Vermont breakfast brought out 35, and at a New York luncheon attendance passed 50, with many strays not present.

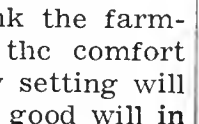

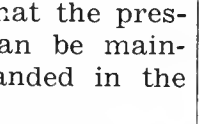

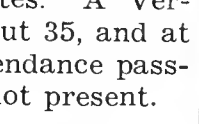

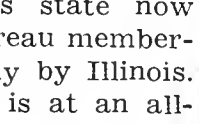

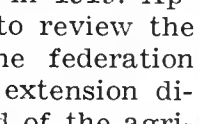

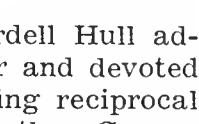

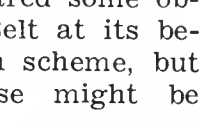

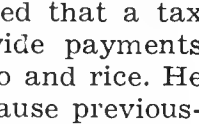

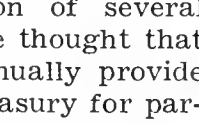

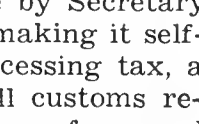

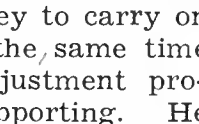

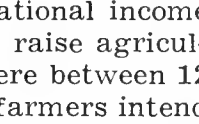

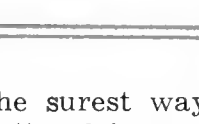

Santa is a Farmer

(Continued from Page 3)

wanton waste in cutting Christmas trees calm themselves, for Christmas tree cutting can be a boon to economical forestry. Careless use of fire in the woods is responsible for the destruction of many millions more trees than are cut for the holiday trade.

As this season's ten million Christmas trees roll to the market we can be thankful that plans now in effect by the farmer and the forester will provide enough trees so that the present rate of production can be maintained and probably expanded in the years ahead.

And we can again thank the farmer whose evergreens, in the comfort and cheer of their holiday setting will be a symbol of peace and good will in a war-torn world.

W. J. Rich, Washington Co., Elected Master of New York State Grange

W. J. RICH of Salem, Washington County, is the new master of the New York State Grange. He succeeds Raymond Cooper of Oswego, who was elected a member of the Executive Committee in place of Edson J. Walrath of Evans Mills.

Rich has had long experience in Grange work. After filling offices in his home county he was deputy, president of the State Deputies' Association, served two years as steward of the State Grange and the past four years as overseer.

Cooper had served four years as state lecturer, eight years as overseer and four years as master. Walrath was a member of the executive committee for 18 years and for the past 15 years its chairman. He acquired a name for himself because of his efficiency, his experience in handling Grange investments and his refusal on several occasions to allow his name to be advanced for the mastership. Walrath on occasion was assured of being elected master, but he chose to serve in the strenuous post of chairman of the executive committee. At Syracuse he told the delegates of his wish to be re-

lieved because of pressure of many other matters.

Mrs. Helen Keller of Bergen, lady assistant steward for the past two years and a former chairman of the Service and Hospitality Committee, was elected lecturer. Henry D. Sherwood of Pine Plains was advanced from steward to overseer. Harold M. Stanley of Skaneateles, secretary, and John W. Kleis of Hamburg, treasurer, were re-elected.

Other officers are: Steward, Ray Lant of East Chatham; assistant steward, Glen B. Sheldon of Lisbon; gatekeeper, Early Watson of Perry; Ceres, Mrs. Florence Wickham of Hector; Pomona, Mrs. Marian Salisbury of Norwich; Flora, Mrs. Emma Case of Canandaigua; lady assistant steward, Miss Florence Pickett of Rock City Falls.

David Kidd of Dansville and Leland D. Smith of Brasher Falls hold over as members of the executive committee.

Cooperation and Research

Not restriction, but cooperation and research to give the nation the blessings of abundance was advocated by

State Master Cooper in his annual address.

"There is food in abundance, but to get it into the hands of the hungry is the problem", he said. "This is said to be a land of abundance, yet it is claimed one-third of our school children are undernourished." He said that marketing is the vital problem before agriculture, and urged that all interests sit down around the council table to find the solution.

Cooper was strong in his condemnation of attempts to interfere with farmers in the orderly marketing of their products. "We deplore all acts of violence by whatever source instigated," he said. "Here in free America every man has the inherent right to worship as he pleases, to work where he pleases, to raise such crops as he wishes and to market the products of his toil whenever, however and wherever he chooses, and any interference with these rights should be discounted."

"We resent the interference by violence of this free delivery of our products as being un-American, and we urge our fellow producers to join together in the spirit of neighborliness and fraternity in the peaceful settlement of all differences."

Cooper said the "people have the matter of taxation largely in their own hands. If we ask for more we must expect to pay more. If we would demand lower taxes," he said, "people must not only insist upon economy but must be prepared to cut appropriations if such action is deemed wise."

Cornell Trustee Reports

H. E. (Ed) Babcock, in reporting for his 10th year as Grange trustee, appeared in a new role, acting chairman of the Cornell board, a dignity which he has held since last spring. He said this honor might be considered a tribute to the Grange policy of continuing its trustee in office long enough to be-

come thoroughly acquainted with the duties and responsibilities of administering a great university.

Babcock reported on a new plan to give farmers and home-makers of the state a direct part in the management of the state colleges and experiment stations. The Cornell board is setting up a permanent standing committee which will be charged with the board's responsibilities in administering state-supported colleges and experiment stations. Under this head are the colleges of agriculture, home economics and veterinary medicine, the experiment stations at Geneva and Ithaca, and their branch stations.

In connection with the colleges, councils are to be created. These will include farmers, home-makers and representatives of farm organizations. The purpose of the councils will be to consider fundamental policies in connection with the administration of the state colleges and the experiment stations, to deal with problems arising from the operation of these institutions and to make recommendations to the administrative committee of the trustees.

Going Ahead

Dean Carl E. Ladd of the State Colleges of Agriculture and Home Economics told the Grange that cuts in appropriations and highly centralized control of the budget at Albany have seriously hampered the work of the colleges. "Some students have had to be refused entrance. Research is crippled badly for lack of supplies and equipment, and the scientific staff has been weakened."

Scholarship Fund Grows

Harold M. Stanley, secretary of State Grange Revolving Scholarship Fund: "Total income of the year was \$10,004.98, but it was only half enough. We have 98 applications for loans on file and to grant them all would require another \$9,800. Total of the fund is \$72,473, but the need is greater than ever."

Edward R. Eastman (Editor Ed) of *American Agriculturist*: "Government cannot and should not do what we the people can do for ourselves. Bureaucrats will take control unless we stop asking government to do everything for us....Our lives are divided into two phases: The necessity to make a living; learning how to live. Let us not lose sight of the main goal—happiness. After all, the goal of Americans is life, liberty and the pursuit of happiness."

Vegetable and Potato Meetings

Utica, January 4 and 5, 1940, is to be the gathering place for the annual joint meeting of the New York State Vegetable Growers' Association and the Empire State Potato Club. This will be the 30th annual meeting of the vegetable growers and the 13th for the potato men.

Headquarters will be at the Hotel Utica where the programs, the banquet on Thursday night, the Trade Show, Potato Show, Vegetable Show, 4-H Exhibits and Judging and the educational exhibits from Cornell University and the Experiment Station at Geneva will be held.

The potato show has been a feature of these meetings for years for the exhibits of both table and seed stocks is quite outstanding. The table potatoes are shown in 32 tuber samples while for certified seed 100 pound tagged bags are required. Of unusual interest this year will be the showing of the new varieties Chippewa, Warba, Houma and Katahdin. The 32 potato sweepstakes winner will have plenty of competition.

The 4-H Club contests and exhibits consisting of (1) potato grading and grade defect identification, (2) vegetable judging, (3) potato judging, (4) identification of weeds, garden seeds, grains and vegetable varieties will draw about 200 contestants who come from all over the state.

Resolutions Acted on by New York State Grange

MARKED by a spirit of unanimity, calm deliberation and good will, the 67th annual meeting of the New York State Grange at Syracuse reviewed the situation of agriculture and mapped a program of action for the year ahead.

Without a dissenting vote, the delegates expressed their belief in the ability of agriculture to manage its own affairs. They upheld the current state legislation which has proved effective. They declared that no new legislation affecting agriculture, nor amendments to the cooperative and milk marketing laws, should be favored except with the full support and approval of the Conference Board of State Farm Organizations.

In other words, the Grange called upon all farm groups to cooperate for the good of all farmers by a united front.

Congress was urged to create a commission which would provide for an honest dollar, through regulating the price of gold to re-establish a price level that would be fair to producers and consumers alike.

Taking a lead from a stirring address by National Master Taber, the convention declared its belief that America should keep out of war and remain neutral.

Development of the St. Lawrence seaway was again approved, as was state milk publicity. A resolution adopted recommended that a tax of half cent a bushel be levied upon apples for advertising purposes and for the stimulation of market demand. This resolution came from Niagara County, in the heart of the fruit belt. It provided that the fund should be administered by a commission representing agriculture.

A number of resolutions concerning

the State Fair generally were critical.

Congress was asked to revoke the power given the President under the Federal Communications Act to take complete charge of radio. The Grange felt this was a step in the direction of suppressing free speech, and that Congress was best qualified to retain this power.

The matter of rural school consolidations was aired thoroughly and there was a generally critical attitude. One resolution adopted urged that no district be included in consolidation except by vote of the district, and that voting be restricted to taxpayers. Reasons for this was the claim that in some districts transients have been a large factor in voting.

Approval of effort to reduce the state budget was voted, but the 10 per cent cut for schools was disapproved. It was pointed out that in many districts this had worked unfairly and had resulted in greatly increased local taxation.

The state was urged to adopt a long-time secondary road program, so that eventually all farms that are to remain in permanent agriculture will have road service. Use of a larger proportion of gasoline tax money for roads was favored, as also was a large proportion of agricultural funds for marketing work.

Daylight saving was opposed and it was declared unfair to allow only city people to vote on this. Grange officers were directed to make a study, with extension and soil conservation services, to determine if present laws were adequate to permit landowners to form soil and water conservation districts. Federal aid for marketing was approved, provided it is handled through the regularly established extension services.

Federal leasing of land for reforestation was opposed because the government requires a lien and because it discourages private effort. Laws making it mandatory for local and county employees to be under civil service was opposed.

Discriminatory taxation that would hamper the orderly movement of farm products to market was opposed. The Legislature was asked to provide a million dollars for Bangs disease control, and to appropriate \$400,000 annually to carry out the Hewitt reforestation program.

Other action by the convention included:

Expressed disapproval of attempts by paid agitators to organize farm labor and promoting strikes directed at overthrowing farm agencies.

Asked the Legislature to prohibit advertising of alcoholic beverages, including beer.

Opposed sale of alcoholic beverages at the State Fair.

Asked Congress to bar sale of war material to Japan.

Favored creative home industries to increase income of farm families free from wage and hour law restrictions.

Urged repeal of law licensing personal loan agents because production credit associations and banks are equipped to render service at lower interest rates.

Favored local control of welfare and opposed assignment of city case workers to rural areas.

Asked Grange officials to make a study to determine what might be done to provide medical services in some rural areas now without them.

Favored uniform traffic laws.

Asked state to assume cost of obtaining highway rights of way and snow removal.

WE DEMAND: Better Living Conditions in Our Dairy Farm Homes

For More than 20 Years This has been the Single Aim of the Dairymen's League

Only organized effort could have done the job that the Dairymen's League has done during the past 20 years. Only organization could have brought about the good that has been accomplished. And only the courage of the thousands of farmers who ARE the Dairymen's League could have carried on a fight so long against such terrific odds.

During all those years the members of the Dairymen's League have fought this battle for A LIVING PRICE FOR MILK. During all those years they have met lies and misrepresentations from the anti-farm gang. During all those years they have battled against seeming overwhelming odds.

But most important of all is the fact that during all those years the objective of the Dairymen's

League has never been changed. It is and has been A LIVING PRICE FOR MILK.

This organization, which functions under the guidance and the judgment of 24 elected directors, has held fast to its purpose. These 24 directors MUST and DO pass on all policy matters. These 24 directors reflect the thinking of the dairy farmers from their particular district. And this method of complete representation has held the Dairymen's League true to its course.

ONE AIM . . . ONE PURPOSE . . . ONE GOAL: TO IMPROVE LIVING CONDITIONS ON THE DAIRY FARMS OF THIS MILK-SHED! During the years to come, Dairymen's League will continue battling for this objective.

Two Alternatives for Dairymen

By LELAND SPENCER.

THE New York Dairy Farm Report just released by the New York Department of Agriculture and Markets indicates that production during November was about 2 per cent larger than a year ago. More milk was received at the dairy plants of the State than in any previous November since

Leland Spencer

1922. The number of cows is about normal, but the cows are giving more milk. The dairy farm reporters are feeding more grain to their cows than in any previous year at this time since the reports were started in 1931.

Another indication of the trend of milk production is provided by the weekly reports of the Dairymen's League on the average quantities of milk delivered per farm. During most of last summer and fall, the deliveries by these dairymen were running below the average of the past three years. In November, however, their deliveries jumped to 6 per cent above this three-year average.

The dairy farmers of New York State are keeping more than the usual number of heifers. This indicates that the number of cows will be increased somewhat in the next two years.

It is not at all difficult to explain this tendency toward larger production of milk in the New York milk shed. The prices that farmers are now getting for milk are high in comparison with the prices of feed and other items that enter into the cost of production. They are also high in comparison with the prices of other farm products.

PRICE COMPARISONS FOR OCTOBER

	Prices		Index numbers (1910-14=100)
	1910-14	1939	
Milk, farm price per cwt.	\$1.64	\$2.32	141
Other farm products			96
Dairy feed, wholesale			
price per cwt.	\$1.45	\$1.45	100
Hay, per ton	\$15.24	\$11.40	75

The returns from 100 pounds of milk in October this year would buy 160 pounds of dairy feed, compared with only 125 pounds in the pre-war years 1910-14, or 144 pounds in the high-price years 1925-29.

It is expected that the prices paid for milk in November and December will compare about as favorably with other prices as was the case in October. The only factor tending to hold milk production in check at the present time is the short supply of roughage.

No one who understands farm conditions has any thought that the dairymen are getting more for milk than they are entitled to. It will take several months of good prices to make up the losses they suffered last summer because of low prices, the drought, and the milk strike. However, we should be guilty of shortsightedness if we failed to consider the future as well as the present and the past. It is more than likely that the present favorable prices will bring on an oversupply of milk in the next few months. The only reason for doubt of this lies in the possibility that the European war may bring a quick rise in commodity prices, including the prices of manufactured dairy products, feeds, and various farm products. It does not seem likely that this will happen in the next six months.

What can be done about it? Probably nothing, except that individual

farmers and cooperatives can protect themselves by adjusting their operations on the basis of prices for the next six months to a year, that are considerably lower than those now being paid. It does not look like a good time for many farmers to put on more cows or to raise more than the usual number of heifers. It is a good time to dispose of old cows or any that are not good producers. Cooperatives that are heavily in debt or lack reserves probably can make deductions for capital purposes more easily now than later.

These are suggestions for the immediate future. But the problem should be considered also from the long-time viewpoint. We must try to reach an intelligent decision as to whether the supply of milk should be kept in adjustment with the market demand by means of "supply and demand" prices or by some sort of production control plan. The possibilities in both directions will be explored in future articles of this series.

Milk Dealers Paying Back Obligations

On December 5 in a talk given at the annual meeting of the Producers' Bargaining Agency at Syracuse, E. M. Harmon, Administrator of the Federal-State Milk Marketing Agreement, outlined the developments in collecting amounts due the producers' settlement fund when the Order was temporarily suspended last March.

In the last month five dealers have paid off these back obligations in full, and four others have made partial payments. This leaves eight on the list of those who have made no payments. A total of approximately \$390,000 owed by dealers when the Order was suspended last spring has been collected. It is quite obvious to producers that this money never would have been paid in without the efforts of the Federal and State Governments. Numerous legal actions against non-complying dealers have been undertaken. In several instances the dealers have been ordered by the courts to make payments and are in danger of being cited for contempt of court if they fail to do so.

The question logically may be asked, "Why is not full payment demanded

immediately?" Here is the answer. Without making any deals with dealers, enforcement agencies take the position that is may be best to allow dealers some time to settle their obligations when they show disposition to do so, rather than to demand immediate settlement, which might throw them into bankruptcy and cause loss of markets to some producers.

Four dealers have failed to pay sums due the settlement fund for the month of October, and action is being taken to secure these payments. Administrator Harmon states that he knows of no market where compliance has been as good as it has in the New York market for the months of July to October. Last winter the average underpayment to producers due to failure to receive full payment into the producers' settlement fund was 3 cents a hundred, while since the Order has been reinstated this underpayment has been less than 1 cent a hundred per month, and some of the time as low as 1/4 cent a hundred.

Mr. Harmon emphasized the necessity for cooperation between cooperatives as well as between members of a cooperative, pointing out that the government cannot shoulder the entire job of milk marketing but will continue to work with organized producers. Said he:

"If this marketing plan is to succeed, it must succeed not by usurping cooperative functions but as an adjunct to cooperative efforts as a means of applying fundamental principles of cooperation to the entire milk shed with the support and assistance of cooperatives. The moment cooperatives undertake to pass on to the government their own responsibilities, at just that moment they start to weaken and pass out of existence."

To Increase Egg Consumption

Once or twice we have mentioned the proposed program to increase consumption of eggs and poultry which has been an outgrowth of the World's Poultry Congress at Cleveland last summer. The latest step is a meeting of the Poultry Industry Planning Committee in Cleveland on November 11.

Meeting with the group was W. T. Termohlen of the U. S. Department of Agriculture, whose services as economic adviser were requested by the Committee and granted by Secretary Wallace.

After discussing several suggested plans, next meeting was scheduled to take place in January or February, at which time action will be taken on a recommended budget of \$50,000 a year for the next two years. It has been suggested that the budget be raised as follows: 35 per cent from poultrymen

The November Milk Price

Administrator E. M. Harmon announces the uniform milk price to producers under Federal-State Milk Marketing Order as \$2.28. This is one cent per hundred more than the uniform price for October and 18c higher than the price received for November of a year ago. Checks received by farmers will, of course, vary according to the butterfat test and freight rate differentials.

According to Mr. Harmon's report the amount of milk included in the computation for November was 31,306,138 pounds less than for October, but was 25,683,680 pounds greater than the amount included in the computation for November a year ago.

Several dealers have announced that they will make special effort to get checks in the hands of the farmers before Christmas.

and local receivers of eggs and poultry; 25 per cent from feed manufacturers and dealers; 20 per cent from other trades allied with the poultry industry; and 20 per cent from distributors and handlers.

Also to be considered at the next meeting will be a report of the Subcommittee on recommended campaign directed both at producers and consumers, and the selection of some one to head the campaign.

Maine Potato Reports Now Available

On page 2 of the November 25 issue Dan Dean called attention to the value to New York potato growers of regular reports on Maine prices. You will be glad to know that such reports are available beginning December 4 from Station WHAM, Rochester, and will be part of the program given each morning at 7:30.

The information will be received at Rochester by special wire from the U. S. Department of Agriculture Market News Office at Presque Isle, Maine. The reports will be made at the close of each day's market and will be available to New York growers early the next morning. Negotiations are under way, also, to make this report available from at least one other station.

Britain and France Take No More Apples

GREAT BRITAIN and France have virtually prohibited imports of apples and pears from America, effective November 20. A year ago the United Kingdom took over 5,000,000 bushels of apples and 2,000,000 bushels of pears; while France imported 1,400,000 bushels of apples and 305,000 bushels of pears.

While it has been generally expected that export movement this year would be less than last, the stopping of exports to Britain and France will further reduce possible exports.

The November crop report made a slight reduction in the estimated commercial apple crop, putting the figure at 100,530,000 bushels. Due primarily to the effect of last year's hurricane, the New England apple crop will be about double the amount harvested in 1938. Increases compared to last year are found in all eastern and central states, with most western states having crops slightly below 1938.

Government purchase of surplus apples up to November 18 had amounted to 3,573 cars in important northeastern apple states. A year ago relief purchases in this area totaled only 607 cars.

Up to November 18, carlot shipments of apples for the entire country, including those for relief, totaled 26,189. Last year for the same date carlot shipments were 26,309.

Growers are somewhat concerned over the apparent necessity of moving a considerable part of this year's apple crop into consuming channels before the first of the year.

New Hampshire Farm Organizations Pull Together

By E. R. EASTMAN.

ONE OF the best of the many meetings it has been my privilege to attend this fall was the annual meeting of the New Hampshire State Grange, held at the same time with the Farm Products Show under the auspices of the New Hampshire Horticultural Society.

I travelled a good distance to attend it, and was glad I did. New Hampshire folks are just like farmers everywhere else — worth getting better acquainted with.

The Horticultural Society did a grand job in bringing together in an interesting Show the products of New Hampshire's farms, gardens and orchards.

Best of all, possibly, was the joint banquet of the Grange and the Horticultural Society, because it showed the very evident determination of New Hampshire's greatest farm organizations to pull together for the good of agriculture.

Uncle George Putnam, New Hampshire's Grand Old Man of Agriculture, President of the State Farm Bureau Federation, spoke briefly on the subject of the Grange and the Farm Bu-

reau working together. Said he was a Granger long before the Farm Bureau was organized.

R. C. Coombs, President of the State Horticultural Society, spoke for only a minute, but long enough again to emphasize team work in the leadership of New Hampshire's farm organizations.

State Master William J. Neal of the Grange then called upon J. B. Hutson of Washington, Assistant Administrator of the Agricultural Adjustment Administration, who gave an excellent talk on some of the problems and questions in the work of the AAA.

The writer called attention to the pioneers, including Daniel Webster's father, who had first extended the frontiers of New Hampshire, and made the point that while America's original frontiers are gone, new and different ones make new problems and opportunities for us of today.

One of the pleasantest parts of my visit was the few moments I had in visiting a real New Hampshire farm and home, that of my friends, Mr. and Mrs. Ralph Graham, at Boscawen.

ONE KILLED — TWO BADLY INJURED IN THIS TERRIBLE ACCIDENT

Mrs. Victor J. Peterson of Detroit, Maine was killed and her husband and daughter were painfully injured when two autos crashed at the intersection of St. Albans road and the main Bangor - Skowhegan highway a mile from Palmyra.

According to the reports Mrs. Peterson died from neck fracture and crushed chest. Mr. Peterson suffered fractured ribs and concussion. Lorraine, the daughter's injuries were lacerations of the scalp, multiple contusions and concussion.

A FEW years ago George L. Brown, licensed agent of the North American Accident Insurance Company, insured the Peterson family with our travel accident protection. More recently William H. Wise of Skowhegan, our licensed agent there, helped them keep the protection in force for all members of the family—the North American policy was a friend in need after this terrible accident.

Mr. Wise has delivered three North American checks in this sad home. \$1,000.00 the death payment, was made

Lorraine Littlefield, daughter of Mrs. Peterson by a former marriage. She was disabled for five weeks as a result of the auto accident.

to Mr. Peterson as Administrator for the Estate of Bernice M. Peterson. Check for \$130.00 was paid Mr. Peterson, this providing the full weekly benefit under his policy. The \$50.00 check to Lorraine Littlefield covered the five weeks she was totally disabled.

We little know when an automobile accident will bring sadness to our home — so the best we can do is to drive with care and carry a North American travel policy. Be sure and renew your policy promptly.

Wallace Goes West

DURING the first part of this month, Secretary of Agriculture Wallace did some traveling which took him to Oklahoma City, Chicago, Des Moines, and St. Paul, where he spoke to large farm audiences.

Defending his farm program, Secretary Wallace urged new type of processing tax to take place of the one which United States Supreme Court threw into waste basket. Pointing out that Congress was getting more and more balky about appropriating money for parity payments, Wallace declared that the farm program should be made "self-financing" by some such scheme as the certificate plan.

Under this plan, farmers cooperating with the A.A.A. would get "production certificates", equal in value to a certain number of cents per pound or bushel. Processors of farm products would have to buy these from the growers before they could sell their goods—in other words, the farmer himself would be the collector of the processing tax.

Answering the argument against processing taxes that they are hard on consumers, Secretary Wallace said:

"If we examine the arguments against the processing tax, we find that they come down to this: They are arguments against fair prices for cotton, wheat, rice, and other commodities. What difference does it make to the consumer whether he pays a fair price for cotton, for instance, as a result of the market price or of a processing tax?"

SLANT: We say it makes a lot of difference to Northeast farmers, who are large consumers of wheat and corn, whether the price they pay for these commodities is the market price, or one to which a processing tax has been added. Northeast farmers are in favor of, southern and mid-western and other farmers getting a fair price for their products, but not at the expense of the Northeast, particularly now when drought and government loans on corn and wheat make the feed situation a bad one in this part of the country. Present method of financing parity payments—that is, by Congressional appropriation—at least distributes the cost over the entire country and does not penalize any one class of consumers.

American Hitler Behind Bars

SING SING will be home, for at least the next 2½ years, to German-American bund leader Fritz Kuhn, who was recently convicted of stealing of bund funds. Before pronouncing sentence, Judge James C. Wallace said that Kuhn was not being sentenced because he is a "hate dispenser or a rabble rouser, for there are thousands of others in this country," but because he is a common thief.

Kuhn, a native of Germany, took part in the Nazi Munich beer-hall putsch, which was Hitler's first attempt to get into power. Failure of the putsch caused Kuhn to flee from Germany to Mexico, from which he entered the United States in 1926, becoming an American citizen in 1934. The next year, he stepped out as leader of an organization called the Friends of Germany, since renamed German-American Bund.

Last February 22, the Bund staged

a giant rally in Madison Square Garden in New York City, and celebrated George Washington's birthday in true Nazi manner with storm troopers, violent speeches against the Jews, and jibes at President Roosevelt. A huge picture of Washington was used on the platform. Since then Kuhn and the Bund have been under investigation by Federal and New York State authorities, and the Dies Committee, ending in Kuhn's being sent to Sing Sing.

Thrilling Sea Battle in American Waters

FIRST great sea battle of European war was fought last week off coast of South America, inside America's so-called "neutral belt." Three British cruisers caught up at last with one of Germany's fast pocket battleships, which for two months has been raiding shipping in South Atlantic. They shelled her so mercilessly that she was forced to seek shelter in harbor of Montevideo, Uruguay, arriving there with 30 dead and 60 injured.

In true modern fashion, thrilling story of the battle was radioed to shore. South Americans sat by their sets and heard a running account of the fight, almost as if they were listening to a round-by-round account of a prizefight or a football game.

British cruisers which battled the German ship spotted her at 6 in the morning, and chased her down the Uruguayan coastline, guns roaring and funnels belching smoke. Battle did not end until after darkness fell. Aboard the Nazi ship when it arrived in Montevideo were 62 British seamen, taken as prisoners by the Germans from British merchant ships they had sunk in the South Atlantic. They were released the next day.

Finns Holding Russians at Bay

In spite of the fact that Russia has a potential army of 14 million men, and that little Finland's army has a maximum strength of only 600,000, the Russians have not been able to make much headway so far. Plucky counter attacks by the Finns have forced their foes back, though how long they can continue to fight successfully against overwhelming numbers is a big question.

In Geneva, Switzerland, the League of Nations has expelled Russia from the League and is moving to give Finland material aid as well as moral support; and in the United States, President Roosevelt has asked a "moral embargo" on shipment of bombers to Russia.

Farm Credit News

Reappointed to Farm Credit Board W. W. Porter, Syracuse, and E. R. Eastman, editor of *American Agriculturist*, have been chosen to serve additional terms of three years each on the Farm Credit Board of Springfield, Mass. Mr. Eastman was reappointed to the office by F. C. A. Governor Forest F. Hill, and Mr. Porter was reelected by stockholders of 140 National farm loan associations in New York, New England, and New Jersey.

Members of the farm credit board are ex-officio directors of the Federal land bank, the Federal intermediate credit bank, the production credit corporation, and the Springfield bank for cooperatives, all permanent farm credit agencies representing some 45,000 individual farmers as well as 78 coopera-

tives that have over 150,000 farmer-members. A seven-man body, the Farm Credit Board has three members who are elected by the farmers that use the credit agencies, three appointed by the F.C.A. Governor to represent the public, and one appointed by the Governor from two nominees selected by National farm loan associations.

E. R. Eastman has served on the board since 1931, and Mr. Porter since 1928. Both own farms in New York state. Porter is a member of the Onondaga National farm loan association.

Mortgage Payments Cut

In the past month, 3,484 ten-year Northeastern farm mortgages have been rewritten to a 20-year repayment plan, by Springfield Land Bank, to give farmers the benefit of smaller installments. Rewriting of repayment terms cuts from \$50 to \$25 the principal payment due each six months for each \$1000 borrowed.

Of 4,906 farmers who replied to Bank's offer to reduce required payments, 208 of them said they wished to leave their payments as they are and to get out of debt as fast as possible.

SLANT: Never put off 'til next year any debt you can pay now.

Brief Farm Notes

FOR FARM USE ONLY

New York State has a new type of motor vehicle license for 1940, something never before tried—\$1.00 farm plates for cars, trucks or trailers which farmers use only on their own property. Idea is to save farmers cost of full registration fees if they want to move such vehicles from one part of a farm across a state or county highway to another part of the same farm. But by law they can't be used anywhere else. For instance, a farmer cannot drive a car which carries a \$1.00 farm plate over to a neighbor's place, nor down to the village store.

Announcement of new plates carried warning that if they were not properly used, there wouldn't be a 1941 series.

FEWER FARM FORECLOSURES

A smaller number of farm families lost their homes in the year which ended on March 1, 1939, than during the previous year. According to figures published this month by United States Department of Agriculture, foreclosures on farms were down to 16.8 per cent per thousand farms. Year before, 17.4 per cent per thousand farms changed hands due to forced sales, and 28.3 per cent in year which ended March 1, 1935.

Figures also show that there were nearly twice as many forced sales of farms in West North Central and Mountain States as in Northeast States.

COUNTRY WOMEN OF THE WORLD

"Until the end of the second world war," the offices of Associated Country Women of the World will be at Cornell University, Ithaca, N. Y., instead of in London, England. Cornell's invitation, seconded by New York State Federation of Home Bureaus, will make it possible for the international organization to keep on with its work. The move will be made as soon as possible, says Mrs. Alfred Watt, president of the ACWW, who described the transfer, at the Home Bureau Federation's recent annual meeting, as "visible evidence of our sympathy and wish to help women in other lands who are already suffering hardships which we cannot visualize."

OATS KING

Canadian Bill Skladen of Andrew, Alberta, was crowned Oats King at 21st international hay and grain show this month. His sample of Victory

oats, weighing 49 pounds to the bushel, gave Canada the grand championship for the twelfth time in 20 years. Skladen's oats weighed 17 more pounds a bushel than the American standard and 15 more than the Canadian standard.

FSCC ADDS FIVE FOODS TO LIST

Pork products, rice, oranges, grapefruit, and hominy grits have been added by U.S.D.A. to list of surplus farm products which relief families can get under food-stamp program. Already on the list are butter, eggs, raisins, apples, dried prunes, onions, dry beans, fresh pears, flour, cornmeal, and lard. Department has also authorized the Federal Surplus Commodities Corporation to buy surplus lard and certain cuts of salt pork to distribute to relief families by State relief agencies where stamp plan is not in use.

Since the stamp plan was first started in Rochester, N. Y., last May, twenty-three other cities have been chosen to take part in it. Largest city included so far is San Francisco, which had a population of 634,394 in the last census.

SWEET POTATO SYRUP

Mid-West corn syrup will soon have a lusty competitor in sweet potato syrup, says Dr. Lawrence E. Stout of Washington University. Dr. Stout reports that after three years of research, a process has been developed which makes it possible to use sweet potatoes commercially for production of a syrup as good as corn syrup, and cheaper.

Breakfast Habits Changing

SLOWLY growing lighter and lighter is the American breakfast, says the New York Times editorially, and then it goes on to prove it with statistics from the Federal Dep't. of Commerce.

Fifty years ago, buckwheat pancakes gave the nation its start for the day. At that time, people ate enough buckwheat cakes to use up 3 pounds of buckwheat per person annually. Today that figure is down to one-third of a pound per person. And friend mush, another old-timer, which used to account for a per capita cornmeal consumption of 117 pounds, is now down to 21 pounds.

Ham and eggs are still doing well, though in the half dozen years after 1931 there was a decline of 20 per cent in egg consumption, and of about 15 per cent in the packing house production of smoked pork (maybe due as much to A.A.A.'s scheme of plowing under little pigs as to a change in eating habits).

Answering question of what Americans are now eating for breakfast, the Times points to more statistics:

Forty years ago, people in this country used 31,000 boxes of grapefruit; in 1935, they used 20 million boxes. Number of orange trees doubled between 1919 and 1935.

Also, two years ago, people spent more than \$100,000,000 for breakfast cereals. "These packaged delights," says the Times, "have obviously helped to fill the gap created by the vanishing flapjack and fried mush."

Good Books to Read

KNIGHTS OF THE SNOWSTORM, Helen Fuller Orton. Most boys and girls wish that some of the glamour of the days of chivalry might color life today. This is the story of a New York girl who felt that way, until she went to visit her cousins in the country and found that knights still ride, though in strange armor and with modern weapons. It's a charming story for young folks.—*Fredk. A. Stokes Company, New York. \$1.50.*

Wallace Gets Control of Farm Credit

LAST SPRING President Roosevelt's Reorganization Order transferred the Farm Credit Administration, which had been an independent agency, to the Department of Agriculture. Farm organization leaders, however, received assurance that the Farm Credit Administration would, for all practical purposes, retain its independence.

In spite of this, developments in the last few days reveal that Secretary Wallace will have complete control over the F.C.A.; that F. F. Hill, governor of the Farm Credit Administration, has been asked to resign; and that A. G. Black, director of the Department of Agriculture's marketing and regulatory work, is to be his successor.

At its annual meeting in Chicago, the American Farm Bureau Federation adopted a resolution asking that the F.C.A. be put under the control of a non-partisan Board of Directors. Both the National Grange and the National Cooperative Council have urged that the F.C.A. be kept independent.

In a statement from Syracuse, where he is attending State Grange, L. J. Taber, National Grange Master, said:

"The National Grange believes that the action of the President and the Secretary of Agriculture abolishing the independent status of the Farm Credit Administration and absorbing it into the Department of Agriculture is not only a backward step but one very injurious to rural life.

"Sound cooperative credit must be free from either political interference on the one hand or production control programs on the other.

"Secretaries of agriculture change with each changing administration, yet the farmers' credit needs must go on regardless of what political party is in power. The Grange will be compelled to urge the congress to restore the independent status of the Farm Credit Administration in the interests of economy, efficiency and good government."

Differences over questions of policy are reported between Governor Hill and Secretary Wallace. The Farm Credit Administration makes several types of loans, including mortgage loans to buy farms or to refinance old loans, as well as short-term production credit loans. Loans are made on a cooperative basis to borrowers believed to have the ability to repay them.

Friends of Governor Hill report that he opposed control of F.C.A. by the Department of Agriculture because he feared that credit of the organization might be used for financially unsound loans for the rehabilitation of low-income farmers and tenants. He is said to believe that such loans should

be kept entirely separate from the Farm Credit Administration.

Bearing on this question is the Wheeler-LaFollette Bill passed by Senate at last session. If passed, it would require F.C.A. to liberalize its loan policies and to use its credit to re-finance farmers who were having difficulties in maintaining payments on the loans.

EDITORIAL NOTE: *This news came just as our presses started to roll. It is one of the most dangerous and far-reaching government moves made in many years. Watch next issue of American Agriculturist for further details and editorial comment.*

On a Three-Legged Stool

(Continued from Page 6)

international financiers.

The temporary war-made rise in commodity prices offers no permanent solution for the farm problem nor for the nation's recovery problem. Steps should be taken now to protect American agriculture from the disasters of another post-war collapse.

A Fair Deal for Farmers

Political leadership in this country must formulate a program that will liberate agriculture from subsidies, price-fixing and government domination and at the same time restore its economic equality with industry and city labor.

Free enterprise can survive only if goods and services are exchanged in free markets with competition to give the most for the least. Because of depression we have tried every kind of device. We have tried restriction, plowing under, bonuses, subsidies. All have left the farmer short one-third of his normal income and the wage earner out of a job. And now the Supreme Court has ruled permitting price-fixing for agriculture by government agencies. If this spreads to other fields, free enterprise will die.

We who wish to preserve constitutional government cannot hope to win unless we have a program which will end the deflation and restore farmers' fair income. We must make self-reliant property-owning farmers the voting allies of all city people who wish to preserve democracy and private enterprise.

My appeal to you business and professional men of Brooklyn is this: Let us find the leadership that understands the methods by which this great agricultural problem has been solved in other nations. Not until we master that problem can we have recovery, full employment and balanced budgets.

WHAT'S NEW IN THIS MILKSHED?

The radio is helping to keep dairy-farmers abreast of the news. And Sheffield Farms is co-operating by bringing you the latest developments in the milkshed on the Weekly Milk Bulletin.

Just a turn of the dial on Monday nights, and you can hear authorities on dairy topics discuss your problems and the news of the dairy world. Frequent guest speakers bring helpful and timely information to men who make milk a business.

TUNE IN the WEEKLY MILK BULLETIN.
7:45 every Monday evening over WGY.

For Joyful Cough Relief, Try This Home Mixture

Saves Good Money. No Cooking.

This splendid recipe is used by millions every year, because it makes such a dependable, effective remedy for coughs due to colds. It's so easy to mix—a child could do it.

From any druggist, get 2½ ounces of Pinex, a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its soothing effect on throat and bronchial membranes.

Then make a syrup by stirring two cups of granulated sugar and one cup of water a few moments, until dissolved. It's no trouble at all, and takes but a moment. No cooking needed.

Put the Pinex into a pint bottle and add your syrup. This makes a full pint of cough remedy, very effective and quick-acting, and you get about four times as much for your money. It never spoils, and is very pleasant in taste.

You'll be amazed by the way it takes hold of coughs, giving you quick relief. It loosens the phlegm, soothes the irritated membranes, and helps clear the air passages. Money refunded if it doesn't please you in every way.

"Hold on Pa — You forgot the plow again."

Good Tools Well Fitted

Wood chopping and sawing contests have caught popular imagination. As is the case with most contests, skill is more important than brawn. But even the most skillful worker, whether he be competing in a contest or merely cutting the winter's wood, needs good tools that are in tip-top shape. A little practice, plus definite directions to follow, insures a good job of saw filing. Why not send to HENRY DISSTON AND SONS, 11270 Tacony, Philadelphia, for their book on Disston cross-cut saws. You will find a handy coupon for the purpose on page 6 of the November 25 issue, or page 25 of the December 9 issue.

TEST FOR MASTITIS

Mastitis (commonly called garget) is one of the troublesome diseases that affect dairy cows. The first thing is to determine what cows are afflicted with the trouble. This can be easily done by a simple test, and material for making the test is available without cost by sending to NEAR'S FOOD COMPANY, Dept. 1039-G, Binghamton, N. Y.

FOR TRAVELERS

Part of the fun in taking a vacation is making plans for it. If you have dreamed of seeing the West, drop a post card to H. M. Fletcher, Dept. AA-80, 560 Fifth Avenue, New York City. Mr. Fletcher, who is with the NORTHERN PACIFIC RAILWAY, will be glad to send you pamphlets for information.

LIVESTOCK

Whether you are buying or selling, livestock pages in *American Agriculturist* are of interest to you. If you have surplus stock to sell, write for information about advertising. If you are in the market to buy, you may find just what you want advertised on the livestock page.

COLDS IN CHICKENS

The General Laboratories Division of PENNSYLVANIA SALT MANUFACTURING COMPANY calls attention to some methods of treating bronchitis and colds in chickens. No effective vaccine has been found for these troubles. Consequently, proper sanitation and management are important. Pullets put into thoroughly disinfected and well ventilated houses are less likely to be troubled. The use of chlorine powder is also help-

STREAMLINED TOOLS. *There is no reason why farm equipment should not have beauty of design along with efficiency in doing the job. The new McCORMICK-DEERING cream separators are both efficient and attractive.*

ful. This is dusted over the heads of the birds on the roosts and can also be used in the drinking water where it helps to prevent spread of the trouble to healthy birds.

TURKEY MARKETING

THE NATIONAL ASSOCIATION OF FOOD CHAINS, Washington, D. C., has been taking steps to help turkey growers market this year's bumper crop. Chain stores will provide special advertising and will use all possible efforts to move turkeys from producers to consumers.

IRVING KAUDER, poultryman, of New Paltz, N. Y., made an enviable record with his chickens in egg laying contests during the past season. At Storrs his pen made a world's record with 3,791 eggs and 4,099 points. His birds also won the Poultry Item Trophy, an award made for the highest five pens entered in laying tests by any breeder. Also won was the Poultry Tribune Trophy for the highest average production for 51 weeks of all pens entered. For the year his Leghorns won three contests over all breeds. Winnings were made at Storrs, Western New York, and Georgia.

THE CHILE N NITRATE SALES CORP. announces that there will be no increase in price of natural Chilean nitrate of soda for the coming season which ends June 30, 1940. At the same time it was stated that there will be ample supplies of Chilean nitrate in this country to meet everybody's needs.

For the man interested in putting crops other than corn into the silo, the November, 1939, issue of "Modern Power Farming," called "New Silages," gives some very complete and worthwhile information. It is published by the ALLIS CHALMERS MANUFACTURING COMPANY, Milwaukee, Wisconsin.

THE BAYER-SEMESAN COMPANY, DuPont Building, Wilmington, Delaware, have prepared a motion picture entitled "Black Scourge." It shows by animation the attack on a wheat seedling by the disease called stinking smut. This film is available to Granges, farm meetings, county agents and vocational agriculture teachers. If you are interested, this company will be glad to give you further information.

Fence fixing time is several months ahead, but winter months are a good time for planning. THE PITTSBURGH STEEL COMPANY, Pittsburgh, Pa., has a booklet called "The Ready Reference Fence Guide" which is chuck-full of information about fence materials and fence manufacturing. The booklet also contains a section filled with miscellaneous information which you will find useful to have on file.

NEARBY MARKETS for NEARBY POULTRYMEN

"Pencil Pushing" Pays Dividends

By PAUL WILLIAMSON,
Department of Agricultural Economics
and Farm Management, Cornell.

"MAN MAKES money farming" would be almost as startling a headline as "man bites dog" in this day of low farm prices and general agricultural distress. It does happen once in a while as indicated by the cost-account figures for 1938 from the farm of Wilbur Chase of Batavia. Poultry formed an important part of his business. He might have been discouraged by the results of cost accounts for 1937 which showed heavy losses to most poultrymen. Instead of that, however, he set out to beat the averages. He was helped by the fact that the past year has been a relatively favorable one for poultrymen.

Cost account figures kept in cooperation with the College of Agriculture are considered confidential information. In this case the results were so interesting that we asked and secured Mr. Chase's permission to pass them along to readers of *American Agriculturist*.

Hatching Costs

Mr. Chase has an incubator large enough to take care of his own requirements, but does not hatch baby chicks for sale. He set 6 hatches during February and March, and took about 2,000 chicks out of the incubator. He had about the same luck as the average, or 62 per cent hatch. He was selling eggs for about 21 cents a dozen in the spring of 1938, but figured his hatching eggs were worth 35 cents a dozen. The extra 14 cents was his estimate of the added cost of keeping roosters, blood testing, keeping extra records, and other costs involved in maintaining a breeding flock.

With modern incubators where the tedious job of turning eggs by hand is replaced by mechanical devices, labor usually amounts to less than 10 per cent of the total cost. Mr. Chase spent a little over 2 hours for each 100 chicks taken out of the incubator, or about the average amount of time. He had an electric incubator and his cost for electricity was also about average, or a little less than one-half cent per chick hatched. Interest, repairs, insurance and depreciation on his incubator were a little high, because of the short season. Maintenance of the incubator usually amounts to a little less than one cent per chick hatched. Mr. Chase's costs were a little more than one and one-half cents. His total cost of incubation of 8 1/4 cents per chick hatched was about the usual cost.

Raising Chicks

Mr. Chase raised his pullets for less than the usual cost. Since feed usually makes up about one-half the total cost of raising young stock, the relatively low feed prices were an important factor in helping this farmer keep his costs down. He was efficient in the arrangement of the brooder house and in his way of taking care of the baby chicks. He managed to get the work done in about one-half the usual length of time and hence his labor cost amounted to only about \$3 per 100 chicks started.

His mortality record was also good. He lost 18 out of 100 chicks started as compared with a usual mortality record on most farms of about 25 per cent. He sold the meat birds for 33 cents apiece. If we subtract the value of the meat birds and the other by-products from the total cost, we find that his cost per pullet raised was 71 cents. He could have sold these pullets for \$1, leaving him a profit of 29

cents per pullet raised, or a total profit on the chick-raising enterprise of \$278.

Producing Eggs

Mr. Chase maintained a flock of about 1000 White Leghorn hens. He thinks of the birds as being little egg-producing factories. The more grain and mash he can put through each factory, the more finished products in the form of eggs they are likely to produce. He fed an average of about 100 pounds of feed per bird. Feed costs usually amount to a little more than one-half the total cost of producing eggs.

The management of the hen flock was also very efficient. He did not waste much time on the non-essentials. Consequently, he spent less than one hour per hen, or about one-half the usual time.

If the usual number of birds die, a flock that is maintained at 100 birds will lose 30 during the year. Mr. Chase's mortality percentage was only 4. One reason for this low mortality was his practice of selling most of his old birds and maintaining principally a pullet flock. The loss on the birds that died, together with the decrease in the value of birds that lived through the year and were sold for meat at the end of the year, made an average cost of depreciation of 42 cents per bird, or less than the usual depreciation.

The usual cost of maintaining an individual "egg-producing factory" is about one cent per day. Mr. Chase's total cost of keeping a bird for a year was \$3. He managed to cut about 65 cents off the usual cost.

The monthly prices he received for eggs varied from 20 cents in March to 33 cents in December, or an average of 27 cents per dozen eggs for all eggs produced during the year. The hens laid 163 eggs per hen, which is about the usual average on good poultry farms. Egg sales made an income of \$3.71 per bird. If the birds are credited with the value of manure, it makes an average profit of 77 cents per bird. The gain in his egg-production account was \$869.

The total gain on the three enterprises of incubation, chick raising, and egg production on this farm was \$1186.

The 1938 cost-account results are being summarized at the present time. Although this job has not yet been completed, it is a safe bet that not many farmers will equal this record. Some lost money on poultry, even though 1938 was a relatively good poultry year, because of heavy death

(Continued on opposite page)

TOYLAND GOES AGRICULTURAL.

Rapid mechanization of America's farms has penetrated even to toyland, with previews of playthings for 1939's Christmas indicating that one of the most popular new items is this farmyard set complete with tractor, spreader, mower, and disc and drag harrows, all equipped with miniature pneumatic farm tires, as are an estimated 85 per cent of this year's man-sized tractors and implements. J. H. Connors, Goodrich vice-president, reports that an unusually large percentage of the 100,000,000 tiny tires molded by the rubber industry this year for toys are tractor-type.

losses, or a poor market for eggs or for other reasons. A summary of the results from the cost-account farms has been published in bulletin form. A post card asking for Bulletin 422, addressed to the Mailing Room, Roberts Hall, Ithaca, New York will bring you your copy.

Your Questions Answered

Damp Houses

As soon as cold weather starts, we are always troubled with damp litter. Is there any way of preventing this?

There are about four ways in which moisture can get into a henhouse, namely: through the floor, from water buckets, through the room, or through the windows in the form of rain. Moisture will come through a concrete floor if it is not properly constructed. Put a box on top of the litter in the corner of the house for a day or two. Then remove it and dig down to the floor. If the litter is moist, it is a pretty good sign it is coming through the floor. The only way to prevent it is to cover the floor with tar paper and put on another layer of cement. In the meantime, the situation will have to be handled as well as you can.

It is probable that more moisture is slopped on the floor from fountains than is commonly realized. Where houses are supplied with running water, some poultrymen have the fountains over a drain which carries away any excess moisture.

It is usually possible by good management to avoid much raining in through the windows. It goes without saying that if there are leaks in the roof, they should be repaired before winter sets in.

The other source of moisture is from the hen's breath and droppings. The only practical method to remove this moisture from the house is by ventilation. It is possible, of course, to remove the litter as soon as it gets damp, but that is a costly and laborious process. It is generally agreed that it is more important to keep the house dry than it is to keep it warm. Nevertheless, exchange of air is brought about primarily by the difference in temperature between the interior of the poultry house and the outside. One way to conserve warmth and, therefore, make the ventilation more effective, is to have the poultry house insulated. Aside from that, the problem is to be certain that you have a ventilation system—either home-made or commercial—that actually works.

Most Colleges of Agriculture have helpful bulletins on ventilating poultry houses, and a number of concerns that manufacture ventilation equipment are glad to give helpful information.

Oats for Cannibalism

In answer to an inquiry for preventing cannibalism in the November 25 issue of your paper, I will give my remedy which I have tried and which proved very successful.

Feed a good quality of whole oats—all the hens will eat up clean every day—and you will have no more trouble. It is lots easier than all those contrivances you suggest. I have tried feeding the whole oats and know it will stop the picking in a few days. They seem to supply something the chickens lack.

I tried this on a flock of laying hens that were picking and killing each other. After feeding the whole oats three days, I had no more trouble, but continued feeding the oats for quite a while. —Mrs. James Orchard, Honesdale, Pa.

BULL CALF

We are offering for sale our first bull calf from Cornell Pride No. 19, an outstanding son of Cornell Pride and Cornell Ollie Lady, which produced 21,240 lbs. of milk and 889 lbs. of butterfat last year. The dam of this calf produced 16,880 lbs. of milk and 631 lbs. of butterfat last year in our own herd on twice a day milking. A bull with such an unusual inheritance for fat test along with milk production can do much to improve most New York Holstein herds.

MARSHALL BROS., ITHACA, N. Y.

KUTSCHBACH & SON, Sherburne, N.Y.

By J. F. (DOC) ROBERTS

THIS WEEK at the Live Stock Show in Chicago, I have seen the results of years and years of live stock progress, or the things that can be done with right breeding and right feeding.

I saw hogs that look to be as long as a cow, without any surplus fat, just solid meat, yet broad and thick and not weighing over 220 pounds. A few years ago, these would have been impossible specifications, but lard was not wanted, in fact has been selling for less than the live price of hogs, so this had to be brought about and the producer did it.

Beef cattle were there, not big, heavy, over-fat cattle, but small, young and light boned, to meet today's requirements for smaller cuts. They talk about "a leg on all four corners" and these could truly be described as a smooth, square block of wood with a matchstick on all four corners.

Horses—; I had imagined there would be less interest in horses, but found they had the largest entry ever and with the greatest interest. The horse show auditorium seats about ten thousand people, so without hurry, in the afternoon I went over to buy a seat for the evening horse show and was told they had turned away over five thousand people the night before and that there wasn't a seat available at any price. In spite of what you may hear, the horse is still among those present; in fact, at this show he is receiving the lion's share of interest, probably because, as so many men have said this week, "We simply could not operate our farm economically without at least some horses." Incidentally, England and France are both purchasing horses in this country for export; up to the present time they have purchased about six thousand, and it is reported the horses are going onto farms in those countries because of the shortage of gasoline and metals

Conrad's Poultry Farm, South Gibson, Pa.

Working regularly every day on the farm of C. E. Hoster near Seneca Falls, N. Y., are two fine horses which have reached the remarkable age of 25 and 23. The horses named "Mac" who is 25, and "Queen", who is 23, are in excellent health and are the pride of the Hoster farm. They make an excellent team and do most of the work which cannot be done with a tractor. Mr. Hoster has one of the finest farms in the Finger Lakes region.

and that not many of them are being used for war purposes. This is sure to have a direct effect upon the price of horses this Spring.

Lambs—; the East again walked away with the prizes. The record that "Pete" McKenzie and his Pennsylvania State College Department of Agriculture boys have made, is the envy of the show. The prize carlot of lambs, bred and fed in Ontario, Canada, were the finest ever shown and were positively beautiful. I saw them sell for 23 cents a pound, alive, so the East is THE lamb section. Are we making the most of it?

I saw a sign which read: "Good Pasture is the Cheapest of all Feeds. Treat it as you would a crop." In general use were bales of hay and straw weighing not over 35 or 40 pounds, and the thought occurred to me, "Why have we been tugging around all our lives with bales weighing 100 to 150 pounds?"

The spirit of the show was undoubt-

edly optimistic. It is generally felt that live stock prices of all kinds, as well as other farm products, while they might not reach a sharp advance or a rapid advance, are definitely headed in the direction of greater farm income.

MRS. F. M. ENGLEHART Wins New York State Bread Baking Contest

Member of Milton Grange in Saratoga County Takes First Place in Closely Contested Finals at Annual Meeting of New York State Grange at Syracuse

"MY, doesn't it smell good in here!" This remark was often heard up at State Grange last week in the room where judges were busy picking prize winners from among the fifty-three fragrant loaves of bread entered

The first prize winner, Mrs. F. M. Englehart of Saratoga County.

Grange; Miss Erica Christianson, Supervisor of Home Economics Education, Syracuse; and Miss Frances Scudder, Syracuse Home Bureau Agent.

When the judging was finished, sealed envelopes containing contestants' names were opened, but identity of winners was a closely guarded secret until the following day. Then, at the morning session, H. L. Cosline, Associate Editor of *American Agriculturist*, announced the winners, and those who were present came to the platform to receive their cash prizes.

Mrs. Joseph Hoyt of Delaware County, second prize winner, and her family.

in the state contest. If anything, the men folks were slightly in the majority among the crowds of Grangers who followed their noses to the spot, and they were all unanimous in giving the enticing looking loaves a big hand. Said one man heartily, "Give me homemade bread any time!"

Entered in this final contest were 53 county champions, each of whom had won first in her subordinate grange and then in her county. Altogether, about 3,000 Grange women (and some Grange brothers) took part in this 7th annual baking contest, sponsored jointly by New York State Grange and *American Agriculturist*.

Most of the loaves of bread entered in the State contest were so good that it was a difficult task to rate them, and final scores were very close. The three judges, who spent nearly four hours scoring them, were Mrs. Elliott Baker of Syracuse, representing the

Holder of the highest score proved to be Mrs. F. M. Englehart, Milton Grange, Saratoga County. Besides winning the title of State Champion Bread Baker, she receives the following prizes:

From *American Agriculturist*: \$25.00.
From Kalamazoo Stove Company, Kalamazoo, Michigan: A Governor Coal and Wood Range.

From Perfection Stove Company, Cleveland, Ohio: A 142-GE Perfection Oven.

From Cooperative G.L.F. Products, Inc., Ithaca, New York: 20-lb. G.L.F. Quality Patent Flour, 5-lb. G.L.F. Self-Rising Pastry Flour, 5-lb. G.L.F. Golden Blend Flour, 5-lb. G.L.F. Whole Wheat Flour, 5-lb. G.L.F. Graham Flour, 5-lb. G.L.F. Golden

Winners in State Bread Baking Contest

No.	Name	Grange	County
1—	Mrs. F. M. Englehart	Milton	Saratoga
2—	Mrs. Joseph L. Hoyt	Mundale	Delaware
3—	Mrs. Ralph Young	Union Center	Broome
4—	Mrs. Elbert S. Morey	Oneonta	Otsego
5—	Mrs. Lois Gardner	Midland	Sullivan

18—	Grace Cushman	Pittstown	Rensselaer
19—	Mrs. Alta R. Dye	Villanova	Chautauqua
20—	Mrs. Morville Charles	Farmersville	Cattaraugus

additional cash prizes were awarded by *American Agriculturist*: \$10.00, second prize; \$5.00, third; \$3.00, fourth; \$2.00, fifth; and \$1.00 each to winners of next 15 highest scores.

American Agriculturist takes this opportunity of thanking all who helped to make the contest a big success. In charge of it for the Grange was Mrs. Nehemiah Andrews of Montgomery, N. Y., state chairman of Service and Hospitality Committee, and she was ably supported by Pomona and Subordinate chairmen. We also wish to express our thanks to the *American Agriculturist* advertisers who so generously donated prizes to Pomona and State winners.

The Judges at work. Left to right: Miss Frances Scudder, Mrs. Elliott Baker, Miss Erica Christianson.

Corn Meal, 5-lb. G.L.F. 50-50 Rolled Wheat and Oats, No. 2½ can G.L.F. Old Jug Molasses (Gold Label).

From International Salt Company, Scranton, Pennsylvania: 10-lb. Can of Meat Salt, Butcher Knife.

From Russell-Miller Milling Company, Minneapolis, Minnesota: 24½-lb. sack of Occident Flour.

Identical prizes were donated to the next nine highest winners by these companies, with the exception of the stove (which went to first prize winner only), and the Perfection oven, received by winners 1 to 4. Also, the following

The prizes as they were exhibited at State Grange meeting.

I, Too, Have Watched a Star

By ETHEL A. M. TOZIER.

I, too, have watched a star
And suffered through a night;
Felt pain give way to wonder
Of motherhood's delight.

I, too, have watched a babe
In swaddling clothes, and dear...
I think I felt as Mary did
That God was very near.

Because I've watched a star
And suffered through the night
Felt pain give way to wonder
At the dawn of early light,

I think I partly understand
His tender love for me:
I think I know what Christmas means,
And what real peace can be.

3029

Winter Favorites

GREENS in every shade you can think of from bottle green to pea green and all stages between are runners-up of the ever popular and most important black. Dress fabrics are very soft and drapy as a rule with emphasis on jersey, featherweight woolens, rayon challis, alpaca sheers, soft mossy crepe weaves, matelasse and the new small patterned jacquards. Velvet and velveteen also rank high. Trimmings are much used, especially braid, passementerie and trapunto or quilted trim.

ALL-OCCASION DRESS PATTERN NO. 3029 has charm for all figures. Its slimming uplift waist, soft blouse and flaring skirt in street or floor length give choice enough for any occasion. Sizes 14 to 48. Size 36 requires 4 3/4

"I have a feeling they're talking about me!"

Merry Christmas

yards of 39-inch material for daytime version.

TURBAN PATTERN NO. 3082 has caught popular fancy like a whirlwind. Either match the turban to your outfit or have a bright silk one to wear with your dark coat. Pattern comes in one size adaptable to any headsize. Turban with bow requires 3/4 yard of 39-inch material; draped one requires 1 1/4 yards 35-inch.

TO ORDER: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Department, *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our attractive Winter Fashion catalog.

Today in Aunt Janet's Garden

Don't Forget to Mulch

ABOUT this time of the year I usually have to get my borders mulched since the ground has frozen hard about one inch deep. Last year I was able to get well rotted mushroom soil for this purpose; other years I have used strawy manure.

The trouble with these is weed seeds, but I was willing to run that risk, because the borders were so much in need of humus. I have also used oak leaves and peatmoss but have not had experience with buckwheat hulls, salt marsh hay or evergreen boughs which are recommended. Even excelsior will serve but it looks unattractive and is a fire hazard if it is too close to the house.

Bush roses, though hilled up with loam about one foot high, might have additional mulch. Buddleia (Butterfly bush) and the various evergreen barberries need a protection of soil heaped around them. Irises and coreopsis, shasta daisies, pinks, primulas, hollyhocks and foxgloves are easily killed with kindness if too heavily mulched. A little brush with a few leaves added for protection allows ventilation. Pansies and English daisies can be covered with straw or leaves, using a few boards to keep the covering in place. Crowns of delphiniums are said to be protected against winter rot if covered with coal ashes after the ground is frozen. Good drainage under all plants is absolutely essential to prevent decay.

All evergreens especially those transplanted late in the fall need a heavy mulch of well rotted manure. Boxwood resents having mulch directly against the plant. The bulb beds will need a light covering unless snow, the best mulch, is certain. In these parts we had bare ground a good part of last winter.

While the family is celebrating, don't forget the feathered friends who may be finding it very difficult to get food just now. Their feeding stations should be in place and well supplied with wild bird food obtainable from seed stores or nurseries. Many birds like suet which may be tied on large branches. Audubon Societies warn us about fastening suet with mesh wire which might freeze to the bird's eyes while pecking food from it. A large mesh dish cloth is recommended instead. If you want to make the birds happy without much expense, soak old crusts of bread and toast in hot water and work into it a little dripping or bacon fat. This makes the fat go farther and is very much relished.

And now to all our readers and those who are dear to them, we make the old wish, the one which becomes brighter the more it is used—"MERRY CHRISTMAS!"

"My Cranberry Sauce for Christmas is ready to serve"

A 1 lb. 1 oz. can of Ocean Spray Cranberry Sauce costs little—serves 8-10 people.

Two months ago Cape Cod's cranberry growers selected the cranberries for your Christmas Cranberry Sauce. In grower-owned canning plants they cooked them with pure white sugar to make a jellied Cranberry Sauce . . . ready to serve.

If Ocean Spray Cranberry Sauce is not already a staple on your pantry shelf, the cranberry growers of Cape Cod invite you to try it for Christmas . . . see if you don't agree Ocean Spray is the finest Cranberry Sauce you've tasted, and best of all . . . ready to serve!

Ocean Spray is sold at all leading chain and independent grocers. **GROWER-PACKED**

Beechnuts and a Battering Ram

OUR MAINE forests do not naturally produce chestnuts, walnuts or butternuts found so abundantly in the Middle States, nor yet the hickorynuts and pecans of the West. The boys and girls of Maine have to make the most of their beechnuts, acorns and hazels.

In New England the beech trees usually produce only a few scattered burs annually. Irregularly, once in two or three years, there is a small yield of nuts. Once in seven or eight years there is a crop which may be termed fairly abundant; but it is only after a long, uncertain period that the great prodigal "beechnut year" occurs.

At the farm that autumn of 1869 we were not aware what the forest beeches were preparing until some of the boys began to go up into the "great woods" after partridges early in September.

"It's a beechnut year," the returning hunters said. "The woods are full of beechnuts! You never saw anything like it; and the squirrels are thicker than mice in a corner!"

Work on a farm is always pressing at harvesting time, particularly on farms like ours where there are large apple orchards. By September 5th the potatoes were dug and the corn all in, but not husked, and the "home orchard" gathered. But all the fall plowing had still to be done and the "Baldwin orchard" on the "Aunt Hannah lot" was still reddening in the autumn sunshine. There were at least three hundred barrels of winter fruit over there to be hand-picked, sorted and barreled, ready for market before the weather turned cold enough to freeze apples.

Moreover, the old squire was away in the northern part of the state that autumn, looking after his lumbering operations for the coming winter. We had but one hired man, and much of the work, as well as the responsibility, fell to us—the three boys at home.

But we planned shrewdly for a spare day for beechnutting up in the great woods, and I believe that it was on the morning of October 2nd that we set off. I remember that there was a white frost on the grass, the leaves were falling, and the blue jays crying about the bare cornfields, as they always cry on these early autumn mornings.

Two youthful neighbors, Tom and Catherine Edwards, accompanied us, and that made seven in the party, for besides Addison, Halstead and myself, our two cousins, Theodora and Ellen who then lived at the farm, went with us. The girls had brought baskets in which to carry home the nuts, and a luncheon.

Folded in the baskets, too, the girls had brought several sheets to spread under the trees to catch the beechnuts as they fell, for after a thick coat of dry leaves covers the ground, it is difficult to find these little three-cornered nuts.

But at first we did not have much success. Not many of the nuts had fallen, and the trees were so large that by beating on the trunks with a beetle or the poll of an ax we could not make the nuts drop. Moreover, these beeches were too big and tall to allow us to climb and shake each branch by itself.

Out of breath, Tom at last threw down the beetle.

"Oh-h-h!" he panted. "No use pounding on such trees as these! It would take a battering ram to jar them!" And I recollect that Addison, hearing this, stopped, and stood regarding Tom thoughtfully, and then looked at the great beech trunks as one will when pondering a new idea.

"How was it that they made the battering rams we read of in old times?" he asked.

"I suppose a ram was the trunk of a big tree, a hundred feet long and three or four feet in diameter," said Tom. "I suppose that it was the biggest tree that they could find anywhere."

"We could not handle such a log as that," Addison remarked. "But we could manage a smaller one, if we had it hung so that we could swing it back and forth."

"Well, it is easy enough to cut a small tree," said Tom. "Let's do it!"

By C. A. STEPHENS

We would hang it up to the limbs of another tree near the beech that we wanted to jar."

We were talking over this project all the while the girls were laying out the luncheon. A small tree trunk would answer the purpose, but ropes or chains were needed to suspend and swing it; and at last Halse and Tom went back home to get ropes. After two hours they returned, bringing a small tackle and block which we used at the barn, and rope forty or fifty feet long.

Meanwhile Addison and I had felled a maple and cut a log from the trunk thirty feet long. At the butt, which we squared, the stick was eight inches thick. It would probably have weighed seven or eight hundred pounds.

When the boys had come back, we chose a beech and found a limb of another tree standing near by from which to suspend the "ram". The block was then attached to the middle of the maple log, and it was hauled up clear of the ground so that it swung at a height of about four feet. Then when the tail-rope was tied to the small end, our improvised battering ram was ready for use. The girls spread the sheets under the beech. Tom and Halstead began pulling at the tail-rope. Addison and I, standing be-

side the log, undertook to guide it. At first, until a full swing of ten or twelve feet was obtained, we steered it clear of the beech trunk; then when full momentum was raised, we turned the course of it slightly and let it go against the beech.

The big tree shook in every limb and twig, and down came the beechnuts in a shower. We shouted and cheered.

The shock was repeated several times, as long as nuts fell freely; and incidentally we noticed that at the place where the ram struck the beech trunk, the bark and outer sap-wood were beaten to pulp.

This one tree was all that we had time for that afternoon. The sun was getting low; and we had soon to be on our way home. Besides, we had not sheets enough to catch the nuts; more than half of them had been lost among the dry leaves. But clearly the battering ram was a success. We determined to take another day, bring more sheets, and gather each a bushel of beechnuts.

It was time to pick those Baldwins. We were well aware of that fact, and it troubled us. In Maine there is no predicting what may come in the way of cold weather after the first week in October. We decided to risk another day for beechnutting, however. That evening the three girls collected all the spare sheets at both farmhouses, and sewed or basted twenty of them together with darning needles and twine to form one great "spread", which, when extended on the ground beneath a beech, was long and broad enough to catch nearly all the nuts that fell.

In those days we were all of us very keen to make money to pay our expenses at Waynor Academy. Tom and Catherine felt sure that an uncle of theirs, who was a grocer living in Boston, would find a market for our beechnuts; these nuts were then sold at retail there at ten cents a pint. Our ambitions rose so fast and hopefully that Kate Edwards got up at five the next morning to write a letter to this uncle, Henry Edwards. We were all astir early, and had the farm chores done in time to start for Beech Ridge again a few minutes after sunrise.

We dragged the battering ram near two other beeches that stood close together, and suspended it to the branch of a large hemlock. Meanwhile the girls had been unrolling and extending

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

A Christmas Prayer

As wise men on that Christmas night
Followed the shining star
Which led them to the world's best gift
In Bethlehem afar,

So may I seek, and surely find,
The truly worth-while things:
Friendship and love, work and health,
And the peace which Christmas brings.

And I pray Thee, Lord, that I may hold
Throughout the coming year,
Within my heart this Christmas peace
Which knows not hate nor fear.

—Irene Bidwell,
Appleton, Wisconsin.

their great spread of sheets under one of the beeches. It was ready to catch the nuts when we set the ram in operation; and again that hollow-sounding *plunk* resounded through the forest, followed by a rattling shower.

By the time we felt obliged to set off for home, we had fully eight bushels of beechnuts gathered, about five bushels of which had to be left there in the woods on the spread, to be brought out in bags the next morning on the back of one of the farm horses. By this time we had grown so absorbed in beechnutting that we not only took another day for it, but had the hired man help us. Nor was that the last day, for I have to record that we were so carried away by the new venture that the Baldwin orchard was neglected for six days, until a great rainstorm came on and put an end to the beechnutting craze.

In all we had gathered about thirty-three bushels of beechnuts. Thirty-one bushels of these were subsequently put up in barrels—old sugar barrels—and sent to Boston. And when the grocer uncle to whom we consigned them made his returns, he remitted three dollars a bushel, or ninety-three dollars!

The rainstorm ended in a flurry of sleet and snow, and those Baldwins were still reddening in the orchard. The old squire had not yet come home, but grandmother had been in a disturbed state of mind about the apples for more than a week.

The weather was still thick, and everything out of doors was soaking wet; but on the morning of October 16th we set off for the Baldwin orchard with a load of empty barrels, baskets and our apple horses as soon as it was light enough to work. For we knew that if the rainstorm cleared with high winds from the northwest, as is the case usually at this season of the year, most of those Baldwins would be on the ground within twenty-four hours. In that case the crop would be unfit for barreling.

The old squire never allowed his name to be put on a barrel of number one Baldwins if so many as three apples in it had blown off the tree or had been shaken off. Every apple must be hand-picked, and every barrel must be "faced" and packed, and every leaf and twig excluded. The old squire's reputation for winter fruit stood high; he took honest pride in it. The buyers never started the head of a barrel that had his name on it.

"They will all have to be hauled to

The Song of the Lazy Farmer

WITH Christmas Day not far away when we should pack our cares away, I wonder if the Prince of Peace, in lookin' at us human geese, don't doubt sometimes if we're worth while, with hate replacin' ev'ry smile. With all our science and our law, we still revert to tooth and claw, with shot and shell we shoot it out and don't know what it's all about. A million kids and more are sad, for in some far-off trench their Dad is shootin' at some other Paws, and so there ain't no Santa Claus in lots of homes when Christmas comes, for Santa's busy droppin' bombs; this year, instead of building blocks, the kids got gas masks in their socks.

It ain't the common folks' fault, they'd rather work for bread and salt, and then when their day's work is done, play with the kids and have some fun. I've found that folks is all the same, for this here war they ain't to blame, they'd rather sit and crack their jokes

than go a-shootin' other folks. They don't hate folks in other lands, when they go marchin' with the bands, their hearts are sad, they have to fight, but rather be at home at night. Ambitious rulers' greed for power brought to the world this fateful hour, dictators order folks around and pile their bones upon the ground. But let us hope this Christmas Day that we can find a better way, when peaceful folks can rule the earth and justify the Savior's birth.

the apple house and dried before it will do to put them up," Addison said as we looked about the orchard. "Oh, we ought to have done this last week!" he added discontentedly.

But repentance picks no apples. We reared the apple horses and began gathering a tree, but it was slow work. The tree had about seven barrels on it. Nearly two hours were required for us to pick it properly. Where the trees hang full and are not too large, one can pick twelve barrels in a day. With good weather we had a seven days' task before us.

By this time the clouds were broken away a little in the north. "It is going to clear off cold and blow," Addison said. "There will not be ten barrels of apples left on these trees by tomorrow at this time!"

"Then what's the use to pick!" exclaimed Halstead. "We might as well shake 'em off and be done with it!"

"And bruise all of them!" said Addison shortly. "They would only be fit for cider apples."

"If we could spread down something, like hay or blankets, I believe it would be just as well to shake 'em off before they blow off," argued Halstead; and Jim Doan, the hired man, thought so too. He was tired of picking apples.

"There's that old rag carpet out in the wagon house," said Jim. "That would be a complete thing to spread under the trees."

But Addison and I were thinking what the old squire would say to such a performance, and felt reluctant to acquiesce in it. By ten o'clock, however, the sky gave such indubitable signs of wind that it really seemed better to shake the apples off on blankets than leave them to be blown off helter-skelter.

Halstead drove to the sheds for more barrels, and brought out the old rag carpet and all the horse blankets which he could find in the stable. We spread these under a tree and shook it; then hastily filled baskets and barrels. It does not take long to gather fruit off a tree in that way, but there were ninety trees, and shaking a large apple tree is hard work.

"We ought to have that batterin' ram o' yours here," said Jim Doane when he had shaken three trees. "That would fetch them down!"

It is always easy to take a second wrong step when once you have taken the first one.

"All right," replied Addison. "We may as well go the whole figure, now we have begun."

But the battering ram was up in the great woods, three miles away. The orchard bordered a tract of woodland, however. Jim went for an ax, and we felled a basswood and cut a log from it twenty feet long. For slinging it up so that we could swing it, we made use of three fence rails, standing them up in the form of a tripod near an apple tree and chaining the top ends together so that we could suspend the log underneath by means of the tackle and block as before.

The contrivance worked most efficiently — so far as jarring off the apples went. Five "bunts" of the ram against the trunk of an apple tree would bring down nearly every apple on it. In this way we could "pick" a tree in less than ten minutes.

A little before noon Theodora and Ellen came out to help us pick. They were astonished when they saw what we were doing; but we persuaded them to keep quiet and help fill barrels. For we were now shaking trees as fast as Halstead and Jim Doane could shift the ram and tripod from one tree to another. Addison and the girls hauled the carpets and blankets to the trees and spread them down. Then *plunk-plunk* would go the battering ram, and down would come the Baldwins!

At noon when grandmother asked us

Woman's Work

By ROBERTA SYMMES.

It's good to remember at end of the day
The duties well-finished we've folded away,
The tiresome tasks, each cheerfully done,
The host of small woman's battles we've won;
The fires we've tended, the floors we have swept,
The endless routine, and the patience we've kept.

It's good to remember at setting of sun
The kind little neighborly deeds we have done,
The smile that made somebody's weary face bright,
The comfort that set childish troubles aright,
The little hurts tended and kissed quite away—
It's good to remember at end of the day!

how we were getting on with the apples, Halstead cried, "Finely!" The girls looked distressed, but said little.

In truth, we did a tremendous day's work. During the afternoon the weather turned colder, with a sky full of broken wind clouds. But by dark we had the last Baldwin tree shaken, and three hundred and sixty-three barrels full of loose apples standing about in the orchard. And as we had expected, there was high wind before morning.

During the two following days the barrels were hauled to the apple house; and we then began sorting them and putting them up for market. They proved to be in such good condition that we made another mistake, and determined to barrel them and say nothing to anyone. Apples were smooth and well grown that year. We put up two hundred and ninety barrels of number ones and thirty-eight of number twos, and they were all drawn to market as usual, about October 28, before the old squire returned home.

But an ill-disposed neighbor who disliked us learned somehow of our operations with the battering ram. Out of spite he told the buyers that all our apples had been shaken off the trees, instead of being picked by hand. The buyers wrote a courteous letter, inquiring as to this — a letter which the old squire did not receive until he came home, a week or more after it arrived. But when he found what was alleged against his apples, he came out, looking very grave, to where Addison and I were at work harvesting turnips, and read the letter aloud to us.

Of course there was now but one thing to do. We began at the begin-

ning with the beechnutting, and related just what had occurred up to the rain-storm and afterward—all but the part about the battering ram; neither Addison nor I mentioned that. The old squire heard us through without comment, but we saw that he felt badly. He could hardly have felt worse than we did.

"Boys," he exclaimed at last, "I would rather every apple over in that orchard had rotten on the ground than to have had this happen!"

That afternoon he drove seven miles to see the buyers about it, for the apples had not yet been shipped from the railway station. They opened ten barrels, hit or miss, and found the apples all right, apparently; but the old squire insisted on rating the entire lot as number twos, thus accepting a loss of about one hundred dollars. He did not allude to the matter again that fall, and we hoped that the trouble was

over. But it was not!

In the following spring, when it came time to trim the Baldwin orchard and scrape down the trunks of the trees, we noticed that nearly every tree trunk had a large spot on it where the bark was dead. Bad-looking spots they were indeed, each as large as a plate. No one could fail to notice them, but they had turned dark-colored, and bade fair to prove an injury to the life of the trees. We saw the old squire going from tree to tree, examining the spots with a puzzled expression; and we felt anything but comfortable.

"Boys," he said at last, "do you know the cause of those great galls?"

Another still more painful explanation was now in order from us, and as a net result of it, we came to the conclusion that while battering rams may answer very well for gathering beech-nuts, they are engines wholly unfit for use in harvesting apples.

Personal Problems

Prove Yourself

Dear Lucile: This may not exactly come under your jurisdiction, but it is something that is making me unhappy.

For years I have been an undisputed leader in my community, taking the initiative in church work, organizing a community club, serving on the school board, supervising women's work at the county fair, etc. I'm not boasting; I've done it because I enjoyed it and thought it helped my community and the people in it to progress. I was a teacher in the community, married a local man and settled down here to live. That was 30 years ago, when a country school teacher was thought to be somebody to look up to and to lead.

Last year a tenant farmer and his wife moved into the neighborhood and straightway this woman mixed herself into affairs . . . and into me. Well, she and I just haven't been able to get along. She has wanted to change my way of doing things . . . old, proven ways that have worked well for years . . . and in so many words has labeled me an "old fogey".

That wouldn't be so bad . . . but people are listening to her and deserting me and my plans. It hurts like everything for my old friends to seem to be so taken up with her. You can understand how hard it is for me to have to give way to her publicly, and when we are in a position where we must work together, it's very unpleasant.

What can I do, not so much to change her, but to make myself accept defeat gracefully, if go down I must?—*Out-Dated.*

The signature of your letter may tell the sad story . . . and I think you realize it, in your heart. You and your ways of doing things . . . good and purposeful as they are and have been . . . are out-dated.

This is a hard truth to accept . . . and a hard position for you to be put in.

Thanks, Readers

for writing in such great numbers in answer to "Worried Mother's" letter, recently published under the heading, "He Has a Prison Record." Your advice is appreciated by Worried Mother and has helped her to come to a decision. Because I know that you will be interested in knowing what other readers thought should be done in this case, I am planning to publish soon excerpts from several of the best letters. — Lucile, Personal Problems Editor.

But it is the time to prove to your friends just how great a woman you are . . . not by accepting defeat, no; a true warrior never drags his feathers in the dust, but by cleverly adapting your plans to this other woman's; offering to work with her before she asks you; insisting that your friends see the good in her projects and cooperate with her. It is even within the realm of possibility that you may become friends, united on a common ground if you are both basically the right sort of leaders, who lead not for personal glory but for unselfish good you can do to others.

* * *

Include our Own People

Dear Lucile: Maybe men aren't supposed to write to your department, but I'm venturing to try for admission.

I've a tough problem which I'd like your opinion on, even though you may not be able to give me any advice. That is: my wife refuses to have anything to do with my folks. We go to her mother's every Sunday for supper . . . we go over at least one night of every week. We spend our holidays with her family. My folks don't live quite so close, but it's only the matter of a few hours' drive. She just won't go. She says she likes my people . . . writes my mother letters . . . does not talk about them . . . but that's as far as it goes. My mother feels badly that we do not come to see her . . . and I have to try to make excuses for an attitude I don't understand. What do you think?—*Inlawed-To-Death.*

I think that your wife is being extremely selfish and that you are perfectly within your rights in taking a firm stand on the matter and insisting that your family be included in the Sunday and holiday itinerary if you are to continue to call on hers.

Here's what I really think's the trouble: I would guess that your wife was a great "home-girl" before you married her, and has never associated with anybody much except her own family. Consequently, they have become so close-knit that without realizing it, she has developed this selfish attitude. She just can't imagine anybody else being any fun.

If you insist that the situation change . . . and she mixes with your family more . . . I feel sure she'll find out it's very interesting and diverting to enlarge her circle, and will plan to visit your people regularly.

"He can't decide which one to marry — one can milk cows but the other one bakes such nice pies."

Kernels, Screenings and Chaff

By H. E. BABCOCK

A CORRESPONDENT writes: "I believe that the time has arrived when the United States of America should begin to train soundly educated, personable, and brainy farm boys to be our representatives among the agricultural nations of the world."

It's not a bad idea, is it?

* * *

Spayed Heifers

During the two years we have been shipping in and feeding Hereford heifers we have often speculated on the practicability of spaying some of them so as to lengthen the time we would have to get them ready for market before they pass their prime. This year we have finally gotten around to trying out the plan.

Because our local veterinarian was not too sure of his ability to perform the operation, we have started in by spaying the smallest heifer in a lot of fifty. The operation was completely successful and, except for a day or so when she didn't eat or drink, the heifer—within a week after the operation—is back to normal. We are now considering watching quite carefully the development of our remaining Hereford heifers with the idea of spaying any which, as they develop, show any deviation from ideal type or other characteristics which would not be acceptable in an animal kept for breeding purposes.

We haven't yet decided just how we will handle these spayed heifers, but have an idea that we will put them right on full feed and finish them as baby beeves. There is a chance, however, that if we spay very many, we will carry a few along on just a growing ration this winter, turn them out in May and June, and bring them in and put them on full feed about the middle of July, which should permit us to have them ready for market around the holiday season.

* * *

Tractors vs. Mules

Last January when we footed up our farm accounts for the year we reported that we were going to do everything possible to keep tractor and truck costs down this year.

These costs are not yet footed up, but Howard has handed in the figures on the tractor he has worked on our Larchmont Farm this summer. His tabulations are presented below:

WORK	HOURS	FUEL
Plowing	110	225 gals.
Harrowing	101	200
Discing	21	42
Drilling	24.50	24.5
Combining	86.50	129.75
Belt	66	66
Trailer	116.5	120.85
Misc.	37.5	20

Total Hours..... 563.00 Total Fuel 828.10 gals.
Total average fuel consumption per hour, 1.47 gals.

In studying the above figures I can see where another year we can cut out

In charge of Sunnygables at present is the most diminutive dog we have ever owned. He is the black Scotty (above) shown pointing out a rat hole to a Cairn Terrier visitor. Mr. Skip, as he is known, is also a gentleman but a slightly roguish one. The big thrill of his life is when he goes through the barns with me each night just before bedtime. Taken all in all, Sunnygables' dogs have been a grand lot—fun-loving, courageous, and loyal. They have added immeasurably to the enjoyment of farming as a way of living.

about a quarter of the hours he worked his tractor by substituting mule power for part of the plowing, all ordinary drilling, and a large part of the trailer work. While we shall plan in good faith to do this, my guess is that when we come to plowing and drilling we will be in a hurry and will use the tractor, even though we have horses

~~~~~  
Wishing you a Merry Christmas  
and a Happy and Prosperous  
New Year.  
—H. E. Babcock.  
~~~~~

Through the years, farm dogs at Sunnygables have taken on all shapes and sizes. To give an idea of some of them, this group of pictures is presented. Above is Lady. Lady is our idea of a desirable type of farm dog. In her case, however, she is just a little too shy and sensitive for the ideal farm temperament. At the left is Limpy, so called, as can be noted from the picture, because his left shoulder was smashed by an automobile, which necessitated his going around on three legs most of his life. Limpy got very old and infirm in service at Sunnygables, but we could not give him a pass to dog heaven until our youngest boy went away to school. Limpy was by all odds the most gentlemanly dog we have ever had. His manners, both in the house and around the farm, were perfect. He had stamina, strength, and courage.

Otto is a purebred Doberman Pinscher who, during his stay of a few months at Sunnygables, started more things and got into more trouble than all the other dogs we have had put together. Otto is now being trained to be a "seeing eye" dog. A recent report on his work says that he is doing well in his studies, but that he has got to get over his willingness to fight anything from a wildcat to a buzz saw if he is to be allowed to stay in school.

and mules standing idle in the barn. We certainly will cut down some on the trailer work, however.

Commenting on his experience with the tractor, Howard says:

"No added weight was used up until 266 hours, at which time it was necessary to add 150 pounds to each wheel in order to prevent excessive slippage. As a result of operating the tractor through an exceptionally dry season without added weight, tire wear has progressed rapidly. Tearing and cutting were below that encountered with heavily weighted tires in previous years' operations. Total average gas consumption per hour is lower than for the previous year with the fully weighted tractor."

Texas Note

A good friend of mine in a government service which takes him all around the country, writes as follows:

"We have enjoyed very much your recent statements and photographs in the American Agriculturist covering your trip to the Davis Mountain country in Texas. . . I know you had a good time on the trip and will never forget your experience. You know, they say that Texas is a state which produces more cattle and at the same time less beef; a country which has more rivers and at the same time less water; and a territory where you can see farther and at the same time see less than any other place on the face of the globe."

Not Like It Seems

SEVERAL central New York farmers
recently signed their names and
lived to regret it. The story goes this
way:

Two gentlemen called, stating that
they were looking for agents to sell a
system of farm accounting. Each sys-
tem cost the agent \$2.00 and was to
be sold to a farmer for a figure some-
where around \$6.50. Exclusive territi-
ory was promised. Then it developed
that to get the territory, it would be
necessary to contract for several hun-
dred of these systems to be paid for in
cash. Figuring that they could sell at
least 3 or 4 a day, several men closed
the deal and handed over several hun-
dred dollars.

Until you analyze it, the proposition
sounds attractive—the joker being
that after turning over the cash, the
systems belong to the agent *regardless
of whether he sells them or not*. The
return of the books is never accepted
and the money is never refunded. In-
cidentally, the deal is entirely legal.
This proposition may turn up in your
neighborhood any time. Think before
you bite.

Calling on one prospect, one new
agent received a shock when the pros-
pect said: "I have a couple hundred
of those things up in the attic. When
you get yours all sold, come back again
and I will let you have mine at a dis-
count."

Bait

"I am enclosing a letter which I have
received—my neighbor received a similar
one. I would appreciate your advice."

The letter says, "There is \$81. be-
longing to you, the existence of which
you are probably unaware. I can tell
you the exact steps necessary to col-
lect it. This is my business—locating
forgotten dollars. I charge a modest
fee for my services, payable to me
ONLY AFTER you collect."

That our reader is skeptical is indi-
cated by the fact that he sent us the
letter. Until we have an opportunity
to investigate more carefully we con-
cur in this skepticism. In the past
such letters have lead to two different
developments. First, this device is
sometimes used by collection agencies
to locate debtors. Naturally, the debt-
or is more likely to reply to this kind
of letter than to a simple request for
verification of his address. Sometimes
the second answer is this: Those who
answer the letter may receive another
one shortly stating that complications

have arisen and that it will be neces-
sary to advance some money to cover
necessary costs of collection. Natur-
ally the advance fee will not be return-
ed if the account is not collected and
we have strong ideas that this is the
usual outcome.

Census Jobs

What procedure should I take in order
to get a job as census enumerator?

Do not write to anyone in Washing-
ton. Wait until a local office is estab-
lished, which will be about the first of
the year and will be announced in the
local paper. At these offices informa-
tion will be available about the rate
of pay, the length of time the job will
last, and other details you may want
to know.

This will be a full-time job as long
as it lasts, and no Civil Service exami-
nation will be required outside the City
of Washington. However, the Census
Bureau will give an examination to de-
termine the qualifications of applicants.

Both men and women will be eligible
for the job of census enumerator, and
announcement has been made that war
veterans or their widows will be given
special preference in cases where they
are as well trained as other applicants.

Fraud Reward

"Last August we had some chickens
stolen. We caught the thieves and they
were sentenced to 90 days in jail. What
further information do we have to give
to get the twenty-five dollar reward offer-
ed by the *American Agriculturist*?"

The Service Bureau **DOES NOT**
offer a reward for the arrest and con-
viction of chicken thieves. Several
years ago a series of rewards for the
conviction of chicken thieves was paid.
Later this was discontinued and definite
announcement of this was made. The
standing reward of \$25 **NOW OFFER-
ED** by the Service Bureau is for the
arrest, conviction and imprisonment
for at least 30 days of a person who
attempts to **SWINDLE** or **DEFRAUD**
a subscriber, who at the time, has a
Service Bureau sign posted on his
premises. This reward does not apply
in any case of theft either of chickens,
animals or crops.

It's a Contract

"I ordered some fruit trees a year ago
for spring delivery. In March I wrote
the company I had no money to pay for
the order and asked them to cancel it.
The agent delivered the trees but when
I told him I could not pay for them he
didn't leave them. Now a collection
agency tells me I must pay the bill.
Must I pay for something I never re-
ceived?"

From a legal standpoint the answer
is yes. You signed a contract which
the nursery fulfilled, and which you
broke. We are printing the story to
point out to readers the necessity of
being sure you can pay for the goods
when delivered before signing a non-
cancellable contract. Misunderstand-
ings frequently arise because the cus-
tomer does not realize what he has
signed—he feels that the order can
be cancelled at any time. This points
to the importance of reading a contract
and understanding it before you put
your "John Hancock" on it.

On the other hand, the company may
not sue, particularly if the amount is
small.

The Service Bureau wishes all its
readers a Merry Christmas and a
Happy New Year.

FEEDING Dairy COWS AND Chickens THIS WINTER

NOW IS A GOOD TIME for dairymen and poultrymen to survey conditions and make feeding plans for the winter. These are factors to be considered:

1. The War
2. The Drouth
3. A Good Milk Price
4. Very Low Egg Prices
5. Return Value of Bags

FEED PRICES

Since the war broke out the first of September, G.L.F. feed prices have made a net advance of \$5.35 per ton. In August it looked as if prices would not advance. There was a great grain crop and plenty of carry-over. But the war came; drouth began to creep over the country, creating the worst deficiency in fall soil moisture in history; a great shortage of dried milk products developed. Meanwhile the government was loaning farmers money on corn and sealing up an estimated half billion bushels of corn in bins.

All these factors have contributed to the rise in feed costs.

Through the rise, decline, and the new rise, G.L.F. has stuck to its policy of following the market on feed prices day by day, and using dividends to adjust the cost at the end of the year. This protects regular users of G.L.F. feeds.

There are in the territory, however, some supplies of ingredients bought before the rise and now being received by feed dealers at country points. Some of these ingredients are exceptionally good values. Where ingredients of known quality are offered at an attractive price by a reliable dealer, farmers may well make use of them to reduce their average feeding costs.

If there is any question about the quality

MOLLIE Segis Ormsby Ona, #1619204, is one of several fine Holsteins in the herd of C. V. N. Davis, Somerville, N. J. Born in 1932, she made her best record as a five-year-old, giving 14,102 lbs. milk and 620.3 lbs. butterfat in 305 days. In feeding such cows as this, it is always a question whether a fixed or a flexible formula feed will do the best job. Mr. Davis, feed purchasing agent of the Raritan Valley Grange, uses 20% Exchange Dairy, a flexible formula.

or value of the feedstuffs, you can be sure of quality supplies by using G.L.F. formula feeds.

FEEDING COWS

The price of milk is good. The November price is the second highest in ten years. This does not necessarily justify buying more cows. It does make it important to feed good cows well. Many farmers will ask themselves and their G.L.F. Service Agency which G.L.F. feed to use. Super Exchange Dairy, running 1532 lbs. T.D.N. per ton, the best 20% formula G.L.F. knows how to put together, is \$2.10 higher than Exchange Dairy, a flexible formula feed running 1518 lbs. T.D.N.

Most farmers have in their dairy some 10,000-pound cows. Such a cow will eat 1½ tons of feed a year.

The question each dairyman must ask himself in feeding a good cow is whether or not 3000 pounds of Super Exchange Dairy, costing on the average \$3.15 more than Exchange Dairy, will make a 10,000-pound cow produce 10,150 pounds. If so, it will pay for the extra cost of feeding.

BAG RETURNS

Along with other things, the price of bags has gone up rapidly. Every dairyman and poultryman should study the savings possible through proper handling of bags. A net saving of at least \$1.80 per ton can be credited against his feed bill by any farmer who will take care of his bags and return them in first class condition.

If your local Service Agency is not able to pay this much for bags, they can be shipped direct to Carl Burwick & Co., at Buffalo, Albany, or Worcester, Massachusetts.

FEEDING HENS

Increased feed costs, accompanied by falling egg prices, have put the poultryman in a tight spot. Close culling will help some. Care of bags will help some. But the biggest potential saving for poultrymen lies in careful selection from the four G.L.F. mashes available for laying flocks.

The new Special Laying Mash, using Brewers' Yeast to supply the vitamins

LOUIS BOELTZ, Greene, N. Y., recently put 1400 birds on Special Laying Mash. "My first thought was not to save money on the purchase price," said Boeltz. "I'd pay 25 cents more a hundred for milk in the mash if it meant more eggs. I have 3500 layers making market eggs and it's worth a few cents a hundred to get more eggs. But if this Special Laying Mash will do the job of making eggs at a saving of \$4.90 a ton, that's the mash to use. I've used G.L.F. feeds for a long time. It is worth a lot to be able to look at the formulas and choose what I figure will do a good job for me. When I saw the Special Laying Mash formula, I figured it would be all right for egg production. If I save money at the same time, so much the better. That's why I have one laying house of 1400 birds getting this new mash. If it goes all right with them, the whole flock will soon be on it."

necessary for maintaining body weight and condition, costs about 15 cents a bag less than Super Laying Mash, and compares very favorably with it as a feed for straight egg production. Poultrymen in every part of the territory are now successfully changing to it.

SUMMING UP

Both dairymen and poultrymen face a winter of higher feed costs. The poultry picture is worse because of low egg prices. Both must take advantage of every available means to get the best possible production at lowest net feed cost. Careful study and use of cooperative facilities will help to do this. Foremost among these opportunities for saving are: (1) Use of the bag program. (2) Careful selection from the formula feeds available.
